ing upon itself, is able to augment its own elasticity and versatility." We may ask, then, "Is not this one of the means, perhaps the principal one, by which the collectivity of living existence becomes a self-improving machine? . . . if the living being is improved by exercise, does not this also explain the progress of the aggregate?" To this query are apparently opposed the observed facts that only the most highly organized animals are amenable to exercise, and that even these animals do not of themselves exercise and perfect themselves, but do so only when man takes them to school. To these it is replied that the lower animals and the higher animals in their natural state have already acquired, perhaps by the aid of exercise, in their instincts, all the faculties they require for the maintenance of their species, and there is no room under those conditions for further improvement or for development in new directions. "Susceptibility to exercise first enters into the animal world when the maintenance of the individual and the species has been so assured, through outer and inner circumstances, that the creature does not need a further particular one-sided development." Improvement by natural selection must be considered as a co-factor with improvement by exercise, in explaining the adaptability of organic nature; and if we do not concede "that the adaptive quality originated otherwise than mechanically, we must conclude that in the struggle for existence those creatures prevailed which, by the exercise of their natural functions, casually increased their fitness for those functions, or did this more than others, and that the beings so favored transmitted this their happy gift to their posterity for further increase. Thus originated an animal world susceptible of exercise; thus was originated natural selection itself, in the exercise of an important aid; finally, thus became the whole of life, like the individual, a self-improving machine."

**EXERCISE DURING INFANTILE DEVELOPMENT.**—The practical question whether systematic exercise should be employed for the physical development of infants and young children has been frequently asked, and has received considerable attention, with some attempts to devise methods for the purpose, but as yet with no very satisfactory results. In considering the form of exercise that might be employed for very young children, it should be remembered that at no period in life does the organism exhibit greater developmental activity than during the first years of existence. Hence it is not advisable that fatigue should be allowed to depress the vital powers, and so interfere with the processes of growth and nutrition. At the same time, it must be borne in mind that a desire for exercise seems to be inherent in the infant. This becomes apparent at a glance when a healthy young child is stripped and laid on a bed, leaving the body and limbs unhampered. Its movements are almost cease-

less; all parts of the body are brought into play, until it seems as if the child were trying to turn itself inside out; and, at the same time, the look of satisfaction which overspreads the countenance shows that the operation is thoroughly enjoyed. This natural exercise should be encouraged, and, instead of being kept, as it too frequently is for the greater part of the day, tightly held in its nurse's arms, or confined in its cot, weighed down with heavy bed-clothes, which restrain its slightest movement, the child should for some time each day be allowed to roll freely on a mattress, lightly and loosely clad, so that it can indulge freely and unhampered in the natural and instinctive exercise of its limbs. As it gets older the desire for exercise seems, if possible, to increase, and it is never tired of creeping about and making premature attempts to walk. While these efforts should be encouraged, they should never be unduly prolonged. As the child grows older, and becomes firmer on its feet, combined movements seem to become its object, and these also may profitably be encouraged. But artificial provisions for exercise are best dispensed with until after the sixth or seventh year. What seems of most importance, and what, unfortunately, is most generally overlooked, is the necessity of securing for the young child complete freedom of all its movements, and thus permitting it to engage in spontaneous exercise without let or hindrance.

**ORIGIN AND DESTINY OF THE FAT-CELLS.**—Professor Simon F. Gage, of Cornell University, has published an account of some microscopic investigations he has made to ascertain the origin and destiny of the fat-cells. His observations were made upon the *Necturus*, or *Megobryanchus*, a perennibranchiate amphibian of the lakes of Western New York. Microscopic investigations have unmistakably shown that the fat of the body does not exist free, but in small, circumscribed masses, composed of protoplasmic cells simply holding fat in readiness for the use of the system. Two theories had prevailed with respect to the origin of these cells: one, held by Von Wittig, Virchow, and others, that they are fixed or branched connective-tissue corpuscles modified into fat-cells; the other, supported by Ranvier, Hoggan, and others, that they are developed from special plasma cells, or from the migratory corpuscles become quiescent for the time. The result of Professor Gage's investigations appears to establish the fact that branched connective-tissue cells become fat-cells by being partly or wholly gorged with fat; and also makes it plausible, from the presence of fat in the small unbranched cells, that migratory corpuscles may become quiescent and assume the duties of fat reservoirs. Thus the two theories are harmonized, and both are shown partly to include the truth. The destiny or purpose of the fat-cell is to be a reservoir, serving to hold a store for the future use of the animal;

and it appears that, whenever the fat is given up, the cells regain their original character, and become, in the one case, simply branched or pigment cells, and, in the other case, special or migratory cells. It is also indicated that the cells, except when too fully gorged with fat, can perform, in part at least, their proper functions.

**THE ACTION OF ANTI-FEBRILE DRUGS ON BODILY TEMPERATURE.**—Drs. H. C. Wood and E. T. Reichert have published the results of fifty experiments which they have made to determine the exact nature of the action of anti-febrile remedies. The bodily temperature is the result of the play between the two antagonistic functions of the production and the dissipation of heat, and the point to be ascertained in the experiments was to determine to which of these functions the remedies tested contributed. In seven experiments with quinine the production and dissipation were both increased, and in all but one of them—in which both effects were equal—the increase in dissipation was much more decided than was that in production. In two of three experiments with cinchona sulphate, dissipation was more increased than production. The same was the case in two trials with cinchonidia sulphate, while the inverse took place in one trial. In fourteen experiments with potash salts (excluding the nitrites) both functions were stimulated, equally in two, while in six dissipation, and in the other six production, was more stimulated. The differences were so small in all the cases that the varying results may be attributed to accidental and uncontrollable influences. A slight increase in the production of heat was observed in two experiments with potassium nitrite, to which, however, the authors do not attach much importance, on account of the transient nature of the effect. With caffeine, the increase of production appeared to be slightly greater than that of dissipation. With alcohol, the average increase in five experiments was the same in both functions, a result in close accord with that which Dr. Bevan Lewis has obtained with a different instrument. The authors do not assume that anything is proved by their experiments except that “at present we have no sufficient evidence as to whether it is heat production or heat dissipation that is primarily affected by the cinchona alkaloids, alcohol, or the potash salts; and that to attempt to reason until the next step is taken by solid experimental research is to abandon firm ground for the cloud-land of speculation.”

#### INFLUENCE OF ACID ON SALIVARY DIGESTION.

—The investigation of the influence of peptone and of certain acids and salts on the digestive action of saliva has been continued by Messrs. Chittenden and Ely, of the Sheffield Scientific School, and Messrs. Langley and Eves, of Cambridge, England. Messrs. Chittenden and Griswold had found in previous experiments that human mixed saliva in the presence of an equal

volume of artificial gastric juice, containing .05 per cent of hydrochloric acid, is capable of forming from a given quantity of starch a much larger amount of sugar than the same quantity of saliva alone can do under a like degree of dilution; a result that is the more remarkable when it is remembered that the same per cent of acid by itself greatly retards the diastatic action. More recent experiments by Messrs. Chittenden and Ely go to show, that while particular products of digestion may exercise a retarding influence upon the action of the ferment which has generated them, by clogging it, that is not necessarily the case when the product of one digestive process is associated with a different allied ferment; and that peptones, a product of gastric digestion, exercise a decided influence on salivary digestion, stimulating the ferment to increased action, particularly in the presence of acid, which of itself completely prevents the conversion of starch into sugar. The experiments from which this view was deduced were first made with peptones in simple aqueous solution, in which condition it appeared that, when they were present to the extent of from 1 to 2 per cent, they caused an increased conversion of starch into sugar, amounting on an average to 4 per cent. The stimulating action of the peptones was clearly not due to the inorganic salts contained in them, for the latter were shown to have, by themselves, in aqueous solution, a retarding influence. When the peptones were tested in an acid solution of the strength of .025 per cent, their presence in the proportion of 1 per cent was found to exercise a very remarkable influence on the diastatic action of the saliva, and to increase the conversion of starch by 7 per cent. Increasing the amount of peptones to 2 per cent did not seem to have any effect in modifying the result; and, in acid solutions of increased strength, the peptones appeared to exercise but slight, if any, influence. The question was next examined, how far inorganic salts could influence the action of the ferment in an acid solution of .025 per cent. Sodium chloride and phosphate, when present to the extent of .012 per cent, were found to exercise but a very slight influence, while calcium phosphate decidedly increased the diastatic action—a result which may help explain the value of the calcium phosphate invariably present in wheat and other grains. Experiments with alkaline solutions showed that the presence of the peptones also favors the digestive process when they are in question, while inorganic salts play, as in the other instances, but an unimportant part in it.

The experiments of Messrs. Chittenden and Griswold in 1881 have appeared to show that the diastatic action of saliva was increased by the presence of very minute quantities (.005 per cent) of hydrochloric acid, but that an increase of the percentage of the acid was accompanied by a diminution of the action, till it stopped, when the amount of acid reached .025 per cent.

This conclusion has been reviewed by Messrs. Langley and Eves, of Cambridge, who suggest that no mention is made in the account of the experiments of the saliva having been neutralized before the addition of the acid; hence the office of the acid may have been simply to render an alkaline saliva neutral—a condition which is found to make the action of the ferment stronger. Their own experiments show that the action of neutralized saliva is diminished by the presence of .005 per cent of hydrochloric acid. Regarding it as an open question whether ptyalin acts best in a neutral, a faintly acid, or a faintly alkaline medium, but certain that a distinctly acid or a distinctly alkaline medium retards its action, they suggest that the cases in which the addition of minute quantities of acid have appeared to have had the stimulating effect observed may be accounted for by supposing that the acid combined with the proteids present, rather than that any free acid actually existed in the fluid. From further experiments in the action of various agents on ptyalin, they find that when saliva is neutralized and then diluted, to prevent any considerable part of the acid being taken up by the proteids, .005 per cent of hydrochloric acid produces a very destructive effect; that sodium carbonate has a very slight destructive but a powerful retarding action; and that neutralized saliva converts starch into sugar more quickly in the presence of neutral peptone than in the presence of acid, .002 per cent and upward.

THE CIRCULATION IN THE BRAIN.—Signor Mosso, who for several years past has been engaged on the study of the circulation in the brain, has lately published an account of his observations which have yielded some very interesting results. He had the rare good fortune to meet with three patients who had holes in their skulls, and was thus enabled to examine the encephalic movements dependent on the changes in the circulation within the organ. No part of the body exhibits a pulsation as varied in form as that in the brain. Signor Mosso describes it as tricuspid; that is, it consists of a strong beat preceded and followed by lesser beats. It gathers strength when the brain is at work corresponding with the more rapid flow of blood to the organ. The increase in the volume of the brain does not depend upon any change in the respiratory rhythm; for, if we take the pulse of the forearm simultaneously with that of the brain, we cannot perceive that the cerebral labor exerts any influence on the forearm, although the pulsation in the brain may be considerably modified. The emotions have a similar effect upon the circulation of the brain to that of cerebral labor. Mosso also observed and registered graphically the variations of the cerebral pulse during sleep. Generally the pulses of the wrist and of the brain vary oppositely. At the moment of waking, the pulse at the wrist diminishes, while that of the brain increases. The cerebral pulsations diminish as the sleep grows deeper,

and at last become very weak. Outward excitations determine the same modifications during sleep as in the waking state, without waking the sleeper. A deep inspiration always produces a diminution in the volume of the brain, in consequence probably of an increased flow of blood into the veins of the thoracic cavity; the increase in volume of the brain, when it takes place, is, on the contrary, due to a more abundant flow into it of arterial blood.

INFLUENCE OF THE BLOOD-CONSTITUENTS ON THE CONTRACTION OF THE VENTRICLE.—Dr. Sidney Ringer, of University College, London, has described a series of experiments made to ascertain the influence which each constituent of the blood exercises on the contraction of the ventricle. He employed, as his principal fluids, a "saline solution," or the ordinary .75 per cent solution of sodium chloride, and "blood mixture," made from dried bullock's blood dissolved in water to represent normal blood, and diluted with five parts of saline solution. When the circulating fluid consists only of "saline solution," the ventricular beats undergo a series of remarkable changes. The contraction at first becomes more complete if the ventricle empties itself imperfectly. The trace representing the beatings soon becomes broader and its summit rounder, while there is a slight diastolic contraction (persistent spasm). Next, the period of relaxation becomes greatly prolonged, and the whole trace is permanently raised higher above the base line. During these changes affecting the expansion of the ventricle the contraction is very little altered, or is rather accelerated. Next, the prolongation of the ventricular dilatation grows less, while the trace rises still higher above the base line. In a series of contractions excited after a stand-still of some fifty or sixty seconds, the first contraction dilates more rapidly than the subsequent ones. The changes in the trace increase, the amplitude and duration of each contraction grow less, and the dilatation often becomes less prolonged. At the same time the ventricle undergoes another curious change. After the contractions have become weakened, the duration of the contraction and the slowness of dilatation are influenced by the strength and duration of the stimulus. Also, if the faradaic excitations be continued till the trace has nearly completed its rise, the contraction is much prolonged. The effect of an increase in the strength or duration and number of stimuli does not occur in a heart fed with blood, nor, in the early stages, with saline. When the dilatation is greatly prolonged, in many cases it is completed at the base while the rest of the ventricle remains quite contracted, and then it extends gradually to the apex. Sometimes, before the dilatation has spread far down the ventricle, the dilated portion contracts again, and there ensues a partial fusion of the excursions in the trace; in fact, we get an imperfect tetanus, the fusion being

due not to increased frequency of the contractions, but to their great prolongation, a second contraction beginning before its predecessor is finished.

Blood and the white of egg in small quantities obviate the changes which occur with saline solution; so also does potassium chloride, in much smaller quantities than exist in serum. Phosphate of potash in smaller proportions than exist in the blood counteracts the prolonged relaxation which the solution occasions; and in general, from the tenor of Dr. Ringer's experiments with other compounds of that metal, probably any potassium salt contributes to such an effect. This is not the case with phosphate of soda, and it is hence inferred that the effect with potassium phosphate is due to the potassium, and not to the phosphoric acid. Serum albumen, free from potassium salts, has no effect upon the dilatation produced by the saline solution.

Distilled water, when introduced to the ventricle, throws it into complete and permanent systole, affecting the cardiac as it does the skeletal muscles, and inducing water rigor. This effect is renewed by adding sodium chloride to the water, while white of egg dissolved in water affects the ventricle just as the water does. Blood, however, is more efficient in restoring the contractions than simple saline solution; but if the rigor, which is in the beginning a condition closely similar to *rigor mortis*, is continued too long, it becomes a true *rigor mortis*, when the ventricle turns white and opaque, and neither sodium chloride nor blood mixture will cause a resumption of contractility. Phosphate of soda removes water rigor, chloride of potassium does not, either in physiological or toxic doses.

The saline solutions used in the preceding experiments were made with the ordinary water of the New River Water Company, and their effects were probably promoted by the impurities in that water. When distilled water was used for the solution the effects were different. An addition of one part of a 1 per cent solution of potassium chloride solution to one hundred parts of circulating saline formed an excellent artificial circulating fluid for the heart. Calcium and calcium compounds, even in minute doses, produced the formerly described changes in the ventricular beat, and their action seems to be favored by cold. Added to the saline solution, with potassium chloride, they make a good artificial circulating liquid. As this composition is neutral, the conclusion is drawn that alkalinity of the circulating fluid is not necessary for contractility. The alkaline reaction of the blood is, however, no doubt necessary, indirectly, to contractility, for muscular contractions develop acidity, which would give an acid reaction to a neutral fluid, while the heart can not contract when supplied with a circulating fluid of that character. Sodium bicarbonate added to saline solution prolongs slightly better contraction

and dilatation. All of its effects are obviated by a physiological quantity of potassium chloride.

A mixture containing a hundred parts of saline solution, five of sodium bicarbonate, five of calcium chloride solution, and one of potassium chloride, makes a circulating fluid with which the heart will continue to beat perfectly. The heart's contractility, however, can not be sustained by any combination of these solutions without the calcium salt; but the addition of a lime salt to any of the combinations will sustain contractility, and will restore it after it has ceased. It is therefore concluded that a lime salt is necessary for the maintenance of muscular contractility. Yet, while calcium salts are necessary for the proper contraction of the heart, if they are not antagonized by potassium salts the beats would become so broad and the diastolic dilatation so prolonged that much fusion of the beats would occur, and the ventricle would be thrown into a state of tetanus. Since the ventricle will continue to beat perfectly for hours without any sodium bicarbonate, it is evident that the normal trace is the result of the antagonizing action of calcium and potassium salts.

PRINCIPAL PHYSIOLOGICAL PUBLICATIONS AND MEMOIRS OF THE YEAR.—The literary work of the year in physiology includes a third edition of Professor Mapother's work, revised by Dr. Knott; a seventh edition of Dr. Dalton's work in a form which, while it is less voluminous than the previous editions, is none the less clear and precise; and a second edition of Harris & Power's "Manual for the Physiological Laboratory." In periodicals have appeared researches on "Chlorophyll," by Pringsheim and Lankester; articles on the "Lymphatic System," by Klein, and on "Saproleptia in relation to the Salmon Disease," by Walpole and Huxley; and "Notes on Echinoderm Morphology," by Herbert Carpenter, in the "Quarterly Journal of Microscopical Science"; a discussion of "The Segmental Value of the Cranial Nerves," by Dr. Milnes Marshall, and a description of the "Cerebral Sinuses and their Variations," by Mr. J. F. Knott, in the "Journal of Anatomy and Physiology"; and papers by Martin and Sedgwick on "The Mean Pressure and the Characters of the Pulse Wave in the Coronary Arteries of the Heart," and by C. S. Roy on "Rhythmical Contractions of the Spleen Independent of Cardiac Movements," in the "Journal of Physiology."

In Continental literature, Georges Hayem's "Leçons sur les Modifications du Sang" give the results of careful investigations of the changes presented by the blood under the influence of various remedies and therapeutic agents. Malassez has specially discussed the development of the red corpuscles in the medulla of the bones, and Marjet the spontaneous changes undergone by the colored corpuscles preserved in plasma without access of air. Alexander Schmidt has given in Brown-Sé-

guard's "Archives" a summary of researches on the physiological and pathological action of the leucocytes of the blood, in which he continues to maintain that the white corpuscles contain a ferment which plays an important part in the act of coagulation. Investigations of the bodies called hæmatoblasts and the transparent corpuscles have been made by Cadet, Bizzozero, Hart, and others; and Bizzozero has suggested an instrument for the optical estimation of the quality of blood. Observations made by Vignol, in Ranvier's laboratory, indicate that in the lower vertebrates the heart possesses a local motor and a local inhibitory center. Duclaux has written a work on ferments and their relation to disease. MM. Dastre and Morat have considered the subject of the dilatation of the blood-vessels under the influence of the nervous system, and conclude that it is, in most instances, of a reflex character. Dubar and Remy have studied the phenomena of absorption by the peritoneum; Langley has worked out, with much success, the histology of the mammalian gastric gland, and the relation of pepsin to the granules of the chief cells. Honigsberg has compared the digestibility of meat, in various conditions, in artificial gastric juice, with conclusions decidedly in favor of the superior digestibility of roast meat. Vella has, by means of intestinal fistula and the subcutaneous injection of pilocarpine, provoked the secretion of intestinal juice, with which he has emulsified fats, converted cane-sugar into grape-sugar, and digested proteids, and established an important difference in its action on muscle from that of gastric juice. Goultz has made some interesting researches into the effects of serious injuries upon the vertex convolutions, and on the occipital lobes of the brains of dogs. Merschewski has investigated the functions of the olivary bodies of the medulla oblongata, which he believes to stand in close relations with the functions of the cerebellum. Hippolyte Martin has drawn interesting conclusions from the investigation of the structure of muscular tissue. Eulenberg has determined the duration of the latent period of the "tendon reflex" in the healthy adult to be, with but little variation,  $\frac{1}{10}$  of a second. He regards it as something more than a mere reflex phenomenon, and endeavors to prove that it is of a complex nature, while Dr. Watterville is disposed to regard it as a direct contraction. M. Richet has published a very complete treatise on the physiology of the muscles and nerves, in which the chief facts now known in regard to the important lesions of these organs are clearly given.

PIERPONT, Hon. JOHN, Chief-Justice of the Supreme Court of Vermont, died at his home at Vergennes, in that State, on the 6th of January. He was born in Litchfield, Conn., September 10, 1806, and was descended from the Pierreponts and Edwardses of colonial times. He began the study of law at the age of eight-

een, in the office of Judge Gould, and three years afterward began its practice with his brother Robert in Rutland, Vt. He subsequently removed to Pittsfield, and finally located in Vergennes in 1832, where he married, in 1838, a daughter of General Viley Lawrence, of that place. In 1841 he was representative of his town in the State Legislature, and was State Senator from Addison County in 1855-'57. He was elected Fourth Associate Judge of the Supreme Court of the State in 1857, and was advanced to the chief justiceship in 1865, which position he held until his death. Judge Pierpont's health had been failing for a year or so, his death being the result of a general breaking down of the system, rather than to any special disease. Judge Pierpont had two sons, one of whom died some years since, shortly after his removal to Chicago. The other son, Henry, married the adopted daughter of Hon. David Davis, of Illinois, and lives in the same city, as does also one of the daughters of the deceased. The other daughter and widow of Judge Pierpont reside in Vergennes.

**POLITICAL ASSESSMENTS.** This was the subject of an unusual amount of public discussion during the year, caused chiefly by the action of the Republican Congressional Committee in calling upon officers, clerks, and others, in the service of the Federal Government, to contribute two per cent of their salaries for election purposes. Representative Jay A. Hubbell, of Michigan, was the chairman of this committee, and D. B. Henderson secretary. The Executive Committee consisted of Senators Allison, Hale, and Aldrich, and Representatives Robeson, Hiscock, McKinley, Davis, of Illinois, Fisher, Page, Calkins, Ryan, Hubbs, Van Horn, and Houk. In May the committee began sending Government employes a circular, of which the following is a copy (see CONGRESS, UNITED STATES, page 151):

HEADQUARTERS REPUBLICAN CONGRESSIONAL COMMITTEE,  
No. 520 THIRTEENTH STREET, NORTHWEST,  
WASHINGTON, D. C., May 15, 1883.

(Here follow the names of the chairman, secretary, and Executive Committee.)

SIR: This committee is organized for the protection of the interests of the Republican party in each of the congressional districts of the Union. In order that it may prepare, print, and circulate suitable documents, illustrating the issues which distinguish the Republican party from any other, and may meet all proper expenses incident to the campaign, the committee feel authorized to apply to all citizens whose principles or interests are involved in the struggle. Under the circumstances in which the committee finds itself placed, the committee believes that you will esteem it both a privilege and a pleasure to make to its fund a contribution, which it is hoped will not be less than \$—.

The committee is authorized to state that such voluntary contribution from persons employed in the service of the United States will not be objected to in any official quarter. The labors of the committee will affect the result of the presidential election in 1884, as well as the congressional struggle, and it may therefore reasonably hope to have the sympathy and assistance of all who look with dread upon the possibility of the restoration of the Democratic party to the control of the Government.

Please make prompt and favorable response to this letter by bank-check, draft, or postal order, payable to the order of Jay A. Hubbell, acting treasurer, post-office box 589, Washington, D. C.

By order of the committee:

D. B. HENDERSON, Secretary.

This action of the Congressional Committee held the New York Civil-Service Reform Association to send to Government employes a communication, of which the following is a copy:

CIVIL-SERVICE REFORM ASSOCIATION,

No. 4 PINE STREET, NEW YORK, June 17, 1882.

DEAR SIR: We understand that a circular has recently been sent to you from the Republican Congressional Committee, asking for contributions toward defraying the expenses of that committee at the coming election.

We desire to inform you that in the opinion of counsel, as the members of the committee are officers of the United States Government, you, as an officeholder, are liable, under section 6 of chapter 289 of the United States Statutes, 1876 (supplement to the Revised Statutes, page 245), to punishment by fine, or removal from office, or both, in case you subscribe, as desired. The National Civil-Service Reform League proposes to bring the matter to the attention of the Attorney-General, and other prosecuting officers of the United States, and until their decision is given we should advise you prudently to refrain from complying with the request of the committee. Respectfully,

GEORGE WILLIAM CURTIS, President.

EVERETT P. WHEELER,

Chairman Executive Committee.

WILLIAM POTTS, Secretary for the New York Civil-Service Reform Association.

The question whether a member of Congress incurred the penalties of the act of 1876 by soliciting or receiving money for political purposes from Government employes, was submitted to Attorney-General Brewster, who gave an opinion to the effect that neither a Senator nor a Representative was an "officer" within the meaning of that statute. In August a second circular, of which the following is a copy, was sent by the Congressional Committee to those persons in the Government service who had not responded to the first:

WASHINGTON, D. C., August 15, 1882.

SIR: Your failure to respond to the circular of May 15, 1882, sent to you by this committee, is noted with surprise. It is hoped that the only reason for such failure is that the matter escaped your attention, owing to the press of other cares.

Great political battles can not be won in this way. This committee can not hope to succeed in the pending struggle, if those most directly benefited by success are unwilling or neglect to aid in a substantial manner.

We are on the skirmish-line of 1884, with a conflict before us, this fall, of great moment to the republic, and you must know that a repulse now is full of danger to the next presidential campaign.

Unless you think that our grand old party ought not to succeed, help it now in its struggle to build up a new South, in which there shall be, as in the North, a free ballot and a fair count, and to maintain such hold in the North as shall insure good government to the country.

It is hoped that by return mail you will send a voluntary contribution, equal to two per cent of your annual compensation, as a substantial proof of your earnest desire for the success of the Republican party this fall, transmitting by draft or postal money-order, payable to the order of Jay A. Hubbell, acting treasurer, post-office lock-box 589, Washington, D. C.

By order of the committee:

D. HENDERSON, Secretary.

The levying of these political assessments or contributions was generally condemned by the press of both parties, as well as independent newspapers.

Meanwhile a case had been begun against General Newton Martin Curtis, which resulted in a decision by the United States Supreme Court on the question of the constitutionality of the act of 1876. General Curtis was a Federal officer in New York city, appointed by the Treasury Department. He was also Treasurer of the New York Republican State Committee, and in that capacity was charged with receiving money from Government employes who had been asked to contribute for political purposes by that committee. At the instance of the New York Civil-Service Reform Association, General Curtis was indicted under the act of 1876, tried in the Circuit Court of the United States, found guilty on two counts of the indictment, and sentenced to pay a fine of \$500 on each, or \$1,000 in all. His counsel contended that Congress had no power to pass the act under which he was indicted, and that therefore it was unconstitutional and void. The Circuit Court affirmed the constitutionality of the law, and the case was brought before the Supreme Court on a writ of *habeas corpus*.

The act of 1876 is as follows:

That all executive officers or employes of the United States, not appointed by the President, with the advice and consent of the Senate, are prohibited from requesting, giving to, or receiving from any other officer or employe of the Government, any money or property, or other thing of value, for political purposes;

And any such officer or employe who shall offend against the provision of this section shall be at once discharged from the service of the United States;

And he shall also be deemed guilty of a misdemeanor, and on conviction thereof shall be fined in a sum not exceeding five hundred dollars.

On December 18, 1882, the Supreme Court rendered a decision holding the act constitutional. In the opinion, written by Chief-Justice Waite, it is pointed out that the above act rests on the same principle as that originally passed in 1789, making it unlawful for certain officers of the Treasury Department to engage in trade or commerce, to own a vessel, to buy public lands or other public property, or to be concerned in the purchase or disposal of the public securities of a State or of the United States; and that passed in 1812, which makes it unlawful for a judge appointed under the authority of the United States to engage in the practice of the law; and that passed in 1853, which prohibits every officer of the United States from acting as an agent or attorney for the prosecution of any claim against the United States; and that passed in 1863, prohibiting members of Congress from practicing in the Court of Claims; and that passed in 1867, requiring the dismissal of any officer or employe of the Government who requests any working-man in a navy-yard to contribute or pay any money for political purposes; and that passed in 1868, prohibiting members of Congress from

being interested in contracts with the United States; and that passed in 1870, which provides that no officer, clerk, or employé in the Government service shall solicit contributions from other officers, clerks, or employés for a gift to those in a superior official position, and that no officers or clerical superiors shall receive gifts from their subordinates. After remarking that many other acts of a kindred character might be referred to, Chief-Justice Waite said:

The evident purpose of Congress in all this class of enactments has been to promote efficiency and integrity in the discharge of official duties and to maintain proper discipline in the public service. Clearly such a purpose is within the just scope of legislative power, and it is not easy to see why the act now under consideration does not come fairly within the legitimate means to such an end. It is true, as is claimed by the counsel for the petitioner, political assessments upon office-holders are not prohibited. The managers of political campaigns not in the employ of the United States are just as free now to call on those in office for money to be used for political purposes as ever they were, and those in office can contribute as liberally as they please, provided their payments are not made to any of the prohibited officers or employés. What we are now considering is not whether Congress has gone as far as it may, but whether that which has been done is within the constitutional limits upon its legislative discretion.

A feeling of independence under the law conduces to faithful public service, and nothing tends more to take away this feeling than a dread of dismissal. If contributions from those in public employment may be solicited by others in official authority, it is easy to see that what begins as a request may end as a demand, and that a failure to meet the demand may be treated by those having the power of removal as a breach of some supposed duty growing out of the political relations of the parties. Contributions secured under such circumstances will quite as likely be made to avoid the consequences of the personal displeasure of a superior as to promote the political views of the contributor—to avoid a discharge from service, not to exercise a political privilege. The law contemplates no restrictions upon either giving or receiving, except so far as may be necessary to protect, in some degree, those in the public service against exactions through fear of personal loss. . . .

If there were no other reasons for legislation of this character than such as relate to the protection of those in the public service against unjust exactions, its constitutionality would, in our opinion, be clear; but there are others to our minds equally good. If persons in public employ may be called on by those in authority to contribute from their personal income to the expenses of political campaigns, and a refusal may lead to putting good men out of the service, liberal payments may be made the ground for keeping poor ones in. So, too, if a part of the compensation received for public services must be contributed for political purposes, it is easy to see that an increase of compensation may be required to provide the means to make the contribution, and that in this way the Government itself may be made to furnish indirectly the money to defray the expenses of keeping the political party in power that happens to have for the time being the control of the public patronage. Political parties must almost necessarily exist under a republican form of government, and, when public employment depends to any considerable extent on party success, those in office will naturally be desirous of keeping the party to which they belong in power. The statute we are now considering does not interfere with this. The apparent end of Congress will be accomplished if it prevents those in power from requir-

ing help for such purposes as a condition to continued employment.

Justice Bradley dissented from the opinion of the court.

In his annual message to Congress in December, President Arthur referred to the subject of political assessments in the following language:

I declare my approval of such legislation as may be found necessary for supplementing the existing provisions of law in relation to political assessments.

In July last I authorized a public announcement that employés of the Government should regard themselves as at liberty to exercise their pleasure in making or refusing to make political contributions, and that their action in that regard would in no manner affect their official status.

In this announcement I acted upon the view which I had always maintained and still maintain, that a public officer should be as absolutely free as any other citizen to give or to withhold a contribution for the aid of the political party of his choice. It has, however, been urged, and doubtless not without foundation in fact, that by solicitation of official superiors and by other modes such contributions have at times been obtained from persons whose only motive for giving has been the fear of what might befall them if they refused. It goes without saying that such contributions are not voluntary, and in my judgment their collection should be prohibited by law. A bill which will effectually suppress them will receive my cordial approval.

Early in January, 1883, the President signed the Civil-Service Reform bill, which contains the following provisions relating to political assessments:

SECTION 11. That no Senator or Representative or Territorial Delegate of the Congress, or Senator, Representative, or Delegate elect, or any officer or employé of either of said Houses, and no executive, judicial, military, or naval officer of the United States, and no clerk or employé of any department, branch, or bureau of the executive, judicial, or military or naval service of the United States shall, directly or indirectly, solicit or receive, or be in any manner concerned in soliciting or receiving, any assessment, subscription, or contribution for any political purpose whatever, from any officer, clerk, or employé of the United States, or any Department, branch, or bureau thereof, or from any person receiving any salary or compensation from moneys derived from the Treasury of the United States.

SEC. 12. That no person shall, in any room or building occupied in the discharge of official duties by any officer or employé of the United States mentioned in this act, or in any navy-yard, fort, or arsenal, solicit in any manner whatever, or receive any contribution of money or any other thing of value for any political purpose whatever.

SEC. 13. No officer or employé of the United States mentioned in this act shall discharge, or promote, or degrade, or in any manner change the official rank or compensation of any other officer or employé, or promise or threaten so to do, for giving or withholding or neglecting to make any contribution of money or other valuable thing for any political purpose.

SEC. 14. That no officer, clerk, or other person in the service of the United States shall, directly or indirectly, give or hand over to any other officer, clerk, or person in the service of the United States, or to any Senator or member of the House of Representatives, or Territorial Delegate, any money or other valuable thing on account of or to be applied to the promotion of any political object whatever.

SEC. 15. That any person who shall be guilty of violating any provision of the four foregoing sections

shall be deemed guilty of a misdemeanor, and shall, on conviction thereof, be punished by a fine not exceeding \$5,000, or by imprisonment for a term not exceeding three years, or by such fine and imprisonment both, in the discretion of the court.

**PORTUGAL**, a monarchy in the south of Europe. The Constitution accorded by Dom Pedro IV, in 1826, was revised by the Cortes in 1852. The legislative power resides in the Cortes, which consists of two Chambers. The Chamber of Peers numbers about 150 members, nominated for life by the King. The Chamber of Deputies has numbered, since 1878, 149 members, who are elected by the people. The hereditary peerage was abolished in 1864. The number of peers whom the sovereign can appoint is not limited. The possession of an academical degree and an income equal to \$1,500 confers eligibility. The franchise is limited to citizens having a clear income of \$107. The Cortes meet and separate at fixed dates. The King has no veto on legislation. All laws concerning the army and general taxation must originate in the Chamber of Deputies.

The King, Luis I, born October 31, 1838, was the son of Maria II and Prince Ferdinand of Saxe-Coburg. He has two sons, Carlos, born in 1863, and Affonso, born in 1865. He succeeded his brother, Pedro V, November 11, 1861.

The executive authority is exercised in the name of the King by a Cabinet divided into seven departments and responsible to the Cortes. The ministry formed November 16, 1881, is composed as follows: President of the Council and Minister of Finance, A. M. de Fontes Pereira de Mello; Minister of the Interior, T. Ribeiro da Fonseca; Minister of Justice and Worship, Dr. J. Marques de Villena; Minister of War *ad interim*, General A. M. Fontes Pereira de Mello; Minister of Marine and the Colonies, J. de Mello Gouvea; Minister of Foreign Affairs, A. de Serpa Pimentel; Minister of Public Works, Commerce, and Industry, Dr. E. R. Hintz Ribeiro.

**AREA AND POPULATION.**—Portugal contains 36,510 square miles, not including the Azores, with an area of 966, and Madeira and Porto Santo, with 317 square miles, which islands form an integral part of the kingdom. The population of continental Portugal, according to the census of January 1, 1878, was 4,160,315 against 3,996,163 in 1868; the population of the Azores in 1878, 259,800; of Madeira, 130,584; total population of the kingdom, 4,550,699. Of this total, 2,175,829 were of the male and 2,374,870 of the female sex. The density of population was 127 to the square mile. The only towns of over 20,000 inhabitants were the capital, Lisbon, with a population of 246,343 (including the suburbs of Belem, population 30,029, and Olivaes, population 28,910), and the seaport Oporto, with 105,838 inhabitants.

**COLONIES.**—The colonial possessions of Portugal have an aggregate area of about 694,400

square miles, and an aggregate population estimated at 3,333,700. Of this number 2,000,000 are the estimated population of the Angola possessions in Africa, about 311,000 square miles in extent; 350,000 the estimated population of the Mozambique possessions, 381,000 square miles in extent; and 300,000 that of Timor, 6,200 miles in area. The Cape Verd Islands contained, in 1879, 99,317 inhabitants, area 148 square miles; St. Thomas and Prince's Islands, in 1881, 21,037, area 415 square miles; town of Macao, in China, in 1880, 59,959; Goa and dependencies, in 1881, 419,993, area 1,250 square miles; Daman and its district, 48,838, in 1881, area 30 square miles; and Diu, in 1881, 12,636.

**COMMERCE.**—The largest share of the commerce of Portugal is with England, to which it ships wine of about the average value of \$5,000,000 a year, and from which it receives cotton goods of four fifths that value, and which with the iron and woolen goods more than balance the account. The total commerce in 1880 amounted to 34,948,000 milreis of merchandise imports and 24,716,000 milreis of exports. (The milreis or 1,000 reis is a gold coin which was equal in value to the old Mexican dollar, about \$1.08.) There were cereals imported of the value of 6,000,000 milreis, textile fabrics of the value of 5,738,000 milreis, metals of the value of 4,544,000 milreis, animal food products of the value of 4,511,000 milreis, and tropical products of the value of 3,258,000 milreis. The chief exports were wines of the value of 9,693,000 milreis, animal food products of the value of 3,440,000 milreis, woods of the value of 3,165,000 milreis, and fruits, etc., of the value of 2,856,000 milreis. Of the total imports of 1880, 15,233,000 milreis came from Great Britain, 5,298,000 milreis from the United States, and 4,140,000 milreis from France; of the exports, 10,783,000 milreis went to Great Britain and 5,964,000 milreis to Brazil.

The total commerce of 1881 was much smaller, the imports amounting to 23,601,000 milreis and the exports to 13,568,000 milreis. The imports of 1882 amounted to 24,875,000 and the exports to 17,488,000 milreis.

The merchant navy numbered, in 1881, 41 steamers and 412 sailing-vessels. The number of vessels entering Portuguese ports in 1880, including coast-traders, was 7,331 sail-ships and 3,278 steamers. Somewhat less than 24 per cent of the tonnage was Portuguese.

The length of railroads in operation in October, 1882, was 1,045 miles. The length of the state telegraph lines at the end of 1880 was 2,730 miles, of wires 6,805 miles. The number of paid dispatches was 633,219, of which 379,802 were domestic, 139,301 foreign, and 114,116 in transit. The receipts were 247,463 milreis against 336,015 in 1879. The total number of letters, papers, and postal-cards forwarded by the post in 1881 was 35,677,441, including 14,600,096 domestic letters, 9,409,208 newspa-

pers, and 792,972 postal-cards, and 3,499,133 foreign letters and postal-cards received and dispatched. The receipts were, in 1879-'80, 495,060 milreis.

**ARMY AND NAVY.**—The army is recruited partly by conscription under the law of 1864, introducing obligatory military service; but about one half the standing army is composed of enlisted volunteers. One half the conscripts are not required to receive instructions. The half who enter the army for the three years of active service are chosen by a second drawing of lots among the total number conscripted. The effective annual recruit averages about 10,000. Immunity from conscription is purchasable for about \$200. The active army in 1882 numbered nominally 1,643 officers and 33,231 men on the peace footing, and 2,688 officers and 75,336 men on the war footing. There were in actual service on the 31st of July, 2,097 officers and 28,156 men, including 2,617 men on leave of absence.

The navy in 1882 consisted of one ironclad corvette, 7 other corvettes, 9 gunboats, 2 torpedo-boats, and 12 other steamers, besides 16 sailing-vessels. It was manned by 280 officers and 3,034 seamen.

**FINANCES.**—The average revenues for the last ten years have amounted to about \$25,000,000, and the average expenditures to about \$3,750,000 more. The total revenue in 1878-'79 was 28,944,484 milreis and the total expenditures were 34,118,700, of which 10,723,928 milreis were paid on the public debt, 7,167,885 for public works, and 16,226,887 for ordinary expenses. The estimated revenue for 1882-'83 is 29,654,012 milreis, of which 6,066,630 milreis are derived from direct taxes, 15,210,770 from indirect, and 2,578,234 from the railroads, posts, and other public property and enterprises. The estimated expenditures are 35,276,211 milreis, of which 13,089,321 are for the public debt; 5,763,870 for the civil list, pensions, interest, and capital payments on temporary debt, and financial administration; 2,161,149 for public instruction, charities, public safety, subventions to municipalities, and other expenses in charge of the Ministry of the Interior; 627,372 for the Ministry of Worship and Justice; 4,599,930 for the Ministry of War; 1,663,721 for the Ministry of Marine and the Colonies; 303,486 for the Ministry of Foreign Affairs; 2,727,084 for the Ministry of Public Works; and 4,335,278 for outlay on public works, constituting the extraordinary expenditure.

The colonial budgets for 1882-'83 show 2,388,445 milreis of aggregate receipts, and 2,579,146 of expenditures.

The public debt on June 30, 1881, amounted to 430,879,399 milreis, of which 232,929,349 milreis formed the domestic debt, newly funded at 3 per cent, and 197,950,050 milreis the foreign debt, contracted in England. For over thirty years there has been no budget without a deficit. The funded debt in July, 1880,

amounted to 391,667,650 milreis. In December of that year a new foreign loan of £4,000,000 sterling was added. The interest on the debt is never fully paid. The foreign 3 per cent loans were issued at 50 per cent of their face value. In 1852 the interest on the debt, amounting then to nearly \$100,000,000, was arbitrarily reduced to 3 per cent. In 1873 the floating debt was funded by the issue of a loan of \$42,500,000 of 3 per cent bonds at 43½ per cent; but it has continued since to accumulate.

**LEGISLATION.**—In the royal speech at the opening of the Cortes on January 2d, new measures for the development of primary and secondary education, army and navy reforms, the building of railroads and highways, for establishing a financial equilibrium, and a new commercial treaty with France were announced. Although the legal period of the session was prolonged eight times and the Cortes sat one hundred and ninety-nine days, many of the measures introduced had to be postponed. The commercial convention with France was approved. A syndicate which undertakes the construction of a railroad from Salamanca, in Spain, to Oporto and Beira Alta was guaranteed 5 per cent interest, in spite of a violent opposition.

**POLITICS.**—The Government continues to restrain its vigorous opponents by force, breaking up public meetings which discuss its policy with hostility. In the latter part of 1882 the anarchistic form of socialism, propounded by the Russian, Bakunin, which has many adherents in Southern Europe, particularly in Spain, began to manifest itself in the formation of secret societies and revolutionary conspiracies.

**POTTER, CLARKSON N.**, lawyer, born at Schenectady, N. Y., in 1824; died January 23, 1882, at his home in New York city. Mr. Potter was of Quaker descent; his ancestors in this country settling at Warwick Neck, R. I., in 1640. His grandfather was Joseph Potter, who represented Dutchess County, N. Y., in the Legislature shortly after the Revolution, and his father Alonzo Potter, Bishop of Pennsylvania. On his mother's side he was descended from the distinguished Eliphalet Nott, for a long time president of Union College, who preached the celebrated funeral sermon over Alexander Hamilton. Mr. Potter was graduated from Union College in 1842, and afterward studied civil engineering at the Rensselaer Institute. In 1843 he went to Milwaukee, Wis., then a small village, where he was employed for a time by the postmaster. He afterward found employment as an engineer, and at the same time studied law, and in 1848 began the practice of this profession in his native State, which he continued until 1859, gaining a high reputation. In this year he retired, his brother, Robert B., succeeding him. On the breaking out of the rebellion his brother enlisted, and Mr. Potter resumed his practice at the bar. In 1868 he was elected to Congress from the Twelfth Dis-

trict of New York as a Democrat, where he soon gained distinction. In this first term he served upon the Committees of Private Land Claims, of Commerce, and of Elections. He was re-elected in 1870, and served upon the Judiciary Committee. He was President of the Democratic State Convention in 1871, and was elected delegate to the Democratic National Convention in the following year. He opposed the nomination of Horace Greeley in this convention, but, as is usual, did his utmost for his election when nominated. He was re-elected to the Forty-third Congress, and served again upon the Judiciary Committee and upon a special committee on the South, appointed to investigate certain election frauds in Louisiana, on which Mr. Potter rendered valuable service. In 1875 he reported, from the Judiciary Committee, a resolution with reference to the presidency, proposing that the term of office be six instead of four years, and that both the President and Vice-President be ineligible for reelection. Mr. Potter declined a nomination to the Forty-fourth Congress, but was elected to the Forty-fifth, as also to the Forty-sixth. He took a prominent part in the discussions relative to the disputed electoral votes of the States of Florida and Louisiana, in the presidential election of 1876, which question was finally settled, as is well known, by the appointment of the Electoral Commission, which decided in favor of Hayes. Toward the close of the session of the Forty-sixth Congress, Mr. Potter moved for the appointment of a select committee to inquire into these same frauds, which was done. Mr. Potter's congressional life ended with this Congress, though he was urged to accept a nomination to the Forty-seventh. In 1879 he received the Democratic nomination for Lieutenant-Governor of New York, but failed of election, though the contest was so close that it was at first supposed he was elected. The following year he went abroad, making quite an extended tour. Since then, until the time of his death, he was engaged in the practice of his profession. His death was quite unexpected, he being taken suddenly sick in court while speaking upon a railroad bond case before the Court of Appeals, at Albany. The immediate cause of death was an acute attack of Bright's disease.

**POWER OF CONGRESS OVER WITNESSES.** The important question as to the power of Congress to compel witnesses who are not members to testify before one of its committees, and to punish for contempt in case of refusal, was raised in April by the refusal of Jacob R. Shipherd to disclose the names of the stockholders in the Peruvian company, and to answer other questions put to him by the committee of the House, directed to inquire into the course of this Government toward Chili and Peru when Mr. Blaine was Secretary of State. In view of the decision rendered early in 1881 by the United States Supreme Court in the Kilbourn case, the committee did not un-

dertake to compel Mr. Shipherd to testify as to the facts which he declined to disclose. In that case the powers of Congress over witnesses were elaborately discussed by the Supreme Court. It appeared that in January, 1876, the House of Representatives passed a resolution which, after reciting that the Government of the United States was a creditor of Jay Cooke & Co., then in bankruptcy, and that that firm had had a large and valuable interest in "the matter known as the real-estate pool" in the District of Columbia, provided for the appointment of a special committee of five to investigate the affairs of the "real-estate pool." Hallet Kilbourn was summoned to appear before this committee, and to bring with him certain records, papers, and maps relating to the subject-matter of the investigation. He appeared, but refused to produce the books and papers called for, and also to answer the questions put to him. He was thereupon adjudged guilty of contempt of the authority of the House, and by order of the House was arrested and sent to jail, where, in consequence of his refusal to testify as required, he was kept forty-five days, at the expiration of which he was released by a writ of *habeas corpus* granted by the Chief-Justice of the Supreme Court of the District of Columbia. Kilbourn then brought an action for false imprisonment against Speaker Kerr, John G. Thompson, the Sergeant-at-Arms, who had made the arrest, and the members of the House who constituted the special committee. Mr. Kerr died before the service of process, and the action abated as to him. Thompson pleaded that in making the arrest he had acted as Sergeant-at-Arms of the House and by its orders. The other defendants alleged that they were members of the House, and maintained that the order of arrest was an exercise of lawful authority. The plaintiff demurred to these pleas, and the demurrer being overruled, judgment was rendered for the defendants. An appeal was then taken to the United States Supreme Court. The issue thus joined raised the question as to the powers of the House over witnesses who were not members. On the part of the plaintiff it was contended that the House of Representatives had no power whatever to punish for a contempt of its authority. The defendants, on the other hand, maintained that such power undoubtedly existed, and when the House had formally exercised it, it was to be presumed that it had been rightfully exercised. An elaborate opinion on the subject was delivered by Justice Miller, and concurred in by all the other justices.

The Court pointed out that the power of Congress itself, when acting through the concurrence of both branches, is a power dependent solely on the Constitution. Neither branch, when acting separately, can lawfully exercise more power than is conferred by the Constitution on the whole body, except in the few instances where authority is conferred on

either House separately, as in the case of impeachments. The Constitution grants to Congress no general power of inflicting punishment. It authorizes each House to punish its own members for disorderly behavior (Article I, section 15, clause 3). And in the clause preceding it is said that they "may be authorized to compel the attendance of absent members, in such manner and under such penalties as each House may provide." There is, however, no express power conferred on either House to punish for contempt.

The advocates of the power argued in favor of its implied existence on the ground of its exercise by the British House of Commons, from which, it was said, we derived our system of parliamentary law. The Supreme Court pointed out that the House of Commons was anciently clothed with judicial functions, and that by virtue of this fact it still retains, like any other court, the power to punish for a contempt of its authority. For that reason this power of the English Commons rests on principles which have no application to other legislative bodies, and certainly can have none to the House of Representatives of the United States—a body which is in no sense a court, which exercises no functions derived from its once having been a part of the highest court of the realm, and whose functions, so far as they partake in any degree of that character, are limited to punishing its own members and determining their election. "We are of opinion," said the Court, "that the right of the House of Representatives to punish the citizen for a contempt of its authority can derive no support from the precedents and practices of the English Parliament, nor the adjudged cases in which the English courts have upheld these practices." The Court then proceeded to indicate what powers may be exercised by Congress, as follows:

As we have already said, the Constitution expressly empowers each House to punish its own members for disorderly behavior. We see no reason to doubt that this punishment may in a proper case be imprisonment, and that it may be for refusal to obey some rule on that subject made by the House for the preservation of order.

So also, the *penalty* which each House is authorized to inflict in order to compel the attendance of absent members may be imprisonment, and this may be for a violation of some order or standing rule on that subject.

Each House is by the Constitution made the judge of the election and qualification of its members. In deciding on these, it has an undoubted right to examine witnesses and inspect papers, subject to the usual rights of witnesses in such cases; and it may be that a witness would be subject to like punishment at the hands of the body engaged in trying a contested election, for refusing to testify, that he would if the case were pending before a court of judicature.

The House of Representatives has the sole right to impeach officers of the Government, and the Senate to try them. Where the question of such impeachment is before either body, acting in its appropriate sphere on that subject, we see no reason to doubt the right to compel the attendance of witnesses, and their answer to proper questions, in the same manner and by use of the same means that courts of justice can in like cases.

Whether the power of punishment in either House by fine or imprisonment goes beyond this or not, we are sure that no person can be punished for contumacy as a witness before either House, unless his testimony is required in a matter into which that House has jurisdiction to inquire, and we feel equally sure that neither of these bodies possesses the general power of making inquiry into the private affairs of the citizen. . . .

In looking to the preamble and resolution under which the committee acted, before which Mr. Kilbourn refused to testify, we are of opinion that the House of Representatives not only exceeded the limit of its own authority, but assumed a power which could only be properly exercised by another branch of the Government, because the power was in its nature clearly judicial. . . .

What was this committee charged to do? To inquire into the nature and history of the real-estate pool. How indefinite! What was the real-estate pool? Is it charged with any crime or offense? If so, the courts alone can punish the members of it. Is it charged with a fraud against the Government? Here, again, the courts, and they alone, can afford a remedy. Was it a corporation whose powers Congress could repeal? There is no suggestion of the kind. The word "pool," in the sense here used, is of modern date, and may not be well understood; but, in this case, it means no more than that certain individuals are engaged in dealing in real estate as a commodity of traffic, and the gravamen of the whole proceeding is that a debtor of the United States may be found to have an interest in the pool. Can the rights of the pool, or of its members, and the rights of the debtor, and of the creditor of the debtor, be determined by the report of a committee, or by an act of Congress? If they can not, what authority has the House to enter upon this investigation into the private affairs of individuals who held no office under the Government?

The Court held that Sergeant-at-Arms Thompson was liable to suit for false imprisonment. But the other defendants were members of the House, and for that reason their case raised another important question. The Constitution declares that Senators and Representatives "shall, in all cases, except treason, felony, and breach of the peace, be privileged from arrest during their attendance at the session of their respective Houses, and in going to and returning from the same; and for any speech or debate in either House, they shall not be questioned in any other place." After citing this clause, Justice Miller said: "Is what the defendants did in the matter in hand covered by this provision? Is a resolution offered by a member, speech, or debate, within the meaning of the clause? Does its protection extend to the report which they made to the House of Kilbourn's delinquency? To the expression of opinion that he was in contempt of the authority of the House? To their vote in favor of the resolution under which he was imprisoned? If these questions be answered in the affirmative, they can not be brought in question for their action in a court of justice, or in any other place. And yet, if a report, or a resolution, or a vote, is not speech or debate, of what value is the constitutional protection? . . . It would be a narrow view of the constitutional provision to limit it to words spoken in debate. The reason of the rule is as forcible in its application to written reports

presented in that body by its committees to resolutions offered, which, though in writing, must be reproduced in speech, and to the act of voting, whether it is done vocally or by passing between the tellers; in short, to things generally done in a session of the House by one of its members in relation to the business before it. . . .

"It is not necessary," concluded the Court, "to decide here that there may not be things done in the one House or the other of an extraordinary character for which the members who take part in the act may be held legally responsible. If we could suppose the members of these bodies so far to forget their high functions, and the noble instrument under which they act, as to imitate the Long Parliament in the execution of the chief magistrate of the nation, or to follow the example of the French Assembly in assuming the function of a court for capital punishment, we are not prepared to say that such an utter perversion of their powers to a criminal purpose would be screened from punishment by the constitutional provision for the freedom of debate. In this, as in other matters which have been pressed on our attention, we prefer to decide only what is necessary to the case in hand; and we think the plea set up by those of the defendants who were members of the House is a good defense, and the judgment of the court overruling the demurrer to it, and giving judgment for those defendants, is affirmed. As to Thompson, the judgment is reversed, and the case remanded for further proceedings."

Mr. Kilbourn prosecuted his suit against Sergeant-at-Arms Thompson, and in April, 1882, recovered a verdict of \$100,000 damages. This, however, was soon set aside by the court on the ground of excessive damages. (See DISCIPLINARY POWER OF LEGISLATIVE ASSEMBLIES OVER THEIR MEMBERS.)

**PRESBYTERIANS. I. PRESBYTERIAN CHURCH IN THE UNITED STATES OF AMERICA.**—A general summary of the statistics of this Church, as published in connection with the "Journal" of the proceedings of the General Assembly for 1882, is given in the table in the next column. The statistics for 1881 are added for comparison.

The condition of the benevolent enterprises of the Church was represented in the reports made by the board having them in charge to the General Assembly in May, the principal items of which may be summarized as follows:

**Board of Ministerial Relief.**—Contributions, \$116,347; permanent fund, \$277,256. Four hundred and sixty-six cases had been assisted during the year.

**Board of Publication.**—Total receipts, \$270,530, of which \$222,046 were in the publishing department, and \$48,484 were in the missionary department. Fifty-four missionaries had been employed, and had assisted 997 schools and organized 78 new ones. The board closed the year with a balance of \$38,586. The Assembly

made important reductions in the administration of the missionary department of the board.

**Board of Education.**—Receipts for the year, \$54,072. Four hundred and seventy students had been aided, of whom 74 were colored, 24 German, 3 Bulgarian, and one was a Hindoo.

**Board of Church Erection.**—Receipts for the year, \$157,185, of which \$71,454 were from churches and individuals.

**The Committee on Theological Seminaries** reported, of the 13 institutions under its charge, that their entire real estate amounted to \$1,626,153 in value, and their endowment and other funds to \$3,693,739. Their income had been \$220,717, and they had been attended by 515 students, 195 of whom had been graduated.

**Freedmen's Committee.**—Receipts, \$79,176; expenditures, \$77,111. Good subscriptions had been received toward the erection of new buildings, and other improvements, for Biddle University and Scotia Female Seminary, amounting to \$106,176. The missionaries consisted of preachers, catechists, and teachers, as follows: Ordained ministers, of whom 56 were colored, 68; licentiates, all colored, 8; in all, 76. Catechists, all colored, 19. Teachers, males, of whom 29 were colored, 32; females, of whom 28 were colored, 46; in all, 79; making a total of 174, of whom 140 were colored. Whole number of schools, 58, with 108 teachers and 6,088 pupils. Number of chartered institutions, 5, in all of which were enrolled 1,641 students. The committee was authorized to procure a charter from the State of Pennsylvania, and to extend its missions and schools into the Gulf States as soon as its circumstances will permit.

**Board of Home Missions.**—Receipts for the Home Mission department, \$403,108; for sustentation, \$46,013; total, \$449,121. Thirteen hundred and three missionaries had been employed, 6,195 persons added on profession of faith, 1,924 adults and 3,820 infants baptized,

196 Sunday-schools organized, 81 churches built, at a cost of \$218,128, 155 churches organized, and 21 churches become self-sustaining, during the year. Whole number of members of the mission churches, 68,041; number in the congregations, 119,689; number of Sunday-schools, 1,384, with 116,501 members. Number of church buildings, 1,121, having a total value of \$3,095,806.

*Board of Foreign Missions.*—Receipts from all sources, \$592,289; expenditures, \$591,639.88, leaving a balance of \$649.80. Of this sum, \$222,252.75 were from churches, \$170,304.23 through the women's societies, \$111,356.57 from legacies, and \$76,342.76 from miscellaneous sources. The mission fields occupied by the board are among the Indian tribes of the United States, in Mexico, South America, West Africa, Siam, China, the Chinese in California, Japan, Persia, Syria. In these fields were 140 ordained American ministers, 84 ordained native ministers, 18 American male lay missionaries, 240 American female missionaries, 607 native lay missionaries, 16,484 communicants; in the boarding-schools, 636 boys and 1,247 girls; in day-schools, 12,743 boys and 4,066 girls; making a total in all the schools of 20,064. The board was expecting to send out 30 new missionaries.

The *General Assembly* of the Presbyterian Church in the United States of America met at Springfield, Illinois, May 18th. The Rev. Herrick Johnson, D. D., of Chicago, was chosen Moderator. The part of the proceedings to which the most general interest was attached was the correspondence with the Southern Presbyterian General Assembly relative to the restoration of fraternal relations, of which an account is given below. The attention of the Assembly was called on appeal to a case of discipline in which a member of the church in Emlenton, Pa., had been excluded for dancing. This brought up the question of the interpretation of an amendment to the constitution of the Church, which had recently been adopted, to the effect that appeals and complaints shall not be carried higher than the synods, unless the decision appealed from "affects the doctrine or constitution of the Church." The appellant in the present case confessed the facts charged, but denied that they constituted an "offense" in the constitutional sense of that word, thus presenting a case which, as the committee to whom the question was referred said in its report, should be held to be one affecting the constitution, and therefore properly coming under the purview of the Assembly. Action was taken upon it as follows: "The Assembly finds that there are two branches to this case: the first involving the question of jurisdiction, and the second the merits of the case. This Assembly is not now able to determine either of these questions, on account of the meagerness of the records, and on account of irregularities which are alleged to have occurred in the trial of the court be-

low. Therefore the Assembly, reserving its judgment both on the question of jurisdiction and the merits of the case, remands the whole case to the session of the church of Emlenton, with the direction to table new charges with adequate specifications, and cite the accused to answer, taking care that the evidence shall show the case to justify the judgment they may render." A committee was appointed to report to the next General Assembly the names of delegates to the next General Council of the Presbyterian Alliance, which is to meet in Belfast, Ireland, in 1884. Resolutions were adopted, deprecating the legislation of Congress with reference to Chinese immigration, and expressing the hope "that such subsequent action may be taken by our Government as will be consistent with treaty obligations, promote and foster the friendly relations hitherto existing between China and the United States, and advance the cause of Christian evangelization in that great empire." A paper on Sabbath Observance was adopted, in which the Assembly admonished all its people to bear in mind the sacredness of the day; entreated all members and officers of churches "to guard against real violations of the fourth commandment by performing labor on the Sabbath, under the claim of necessity or mercy, where such claim can not be sustained by the Word of God"; urged liberal measures to disseminate Sabbatarian principles among foreign immigrants; committed the case as to members of the church to the sessions; urged ministers to represent the subject to their congregations; and resolved, "that inasmuch as prominent among the forms of Sabbath desecration prevalent in our times are those to which many railroad and steamboat companies and publishers of Sunday newspapers are addicted, the Assembly earnestly counsel all our people not to be, as owners, managers, or employees of such companies, or as shippers or passengers on the Sabbath, or as publishers or patrons of Sunday newspapers, partakers in the guilt of their flagrant forms of Sabbath-breaking."

**II. PRESBYTERIAN CHURCH IN THE UNITED STATES.**—The following is the summary of the statistics of this Church as officially published in connection with the "Journal" of the proceedings of the General Assembly for 1882:

Synods.....	13
Presbyteries.....	66
Candidates.....	160
Licentiates.....	40
Ministers.....	1,081
Churches.....	2,010
Ruling elders.....	6,083
Deacons.....	3,917
Added on examination.....	6,062
Total communicants.....	123,806
Adults baptized.....	1,868
Infants baptized.....	4,769
Number in Sunday-schools and Bible classes.....	75,888

#### CONTRIBUTIONS.

Sustentation.....	\$36,937
Evangelistic.....	25,809
Invalid fund.....	10,407
Foreign missions.....	46,683

Brought forward.....	\$119,791

Pastors' salaries.....	540,745
Congregational.....	847,918
Miscellaneous.....	58,132
Total.....	\$1,130,138

The standing committees having the various denominational enterprises in charge reported to the General Assembly:

*Committee on Education.*—Receipts, \$11,767, or \$1,452 more than the receipts of the previous year. One hundred and fourteen candidates for the ministry were returned, against 144 in 1881.

*Committee of Home Missions.*—The receipts had been: for sustentation, \$21,715, showing an increase of \$3,189 over the contributions of the previous year; for evangelistic work, \$13,821; for the Invalid fund, \$11,088. Aid had been given in the sustentation department to 180 ministers, who were serving more than 400 churches. Eighteen pastoral charges, embracing forty or fifty churches, had become self-sustaining. Fifty-five evangelists had been supported, and twelve laborers were conducting the colored evangelistic work with a commendable degree of success. A bequest of \$25,000 had been made by Dr. Stuart Robinson to the Invalid fund, as a permanent capital, with the expectation that the Church would raise the amount to one hundred thousand dollars.

*Committee on Foreign Missions.*—The receipts from all sources had been \$69,309, of which \$51,999 were from churches and individuals, legacies, &c., \$10,984 from women's missionary associations, and \$6,326 from Sunday-schools. The increase over the receipts of the previous year was \$10,783. The missionary force under the direction of the committee included one hundred and four persons, consisting of twenty ordained ministers, one missionary physician, and twenty-six female missionary laborers from the United States; thirteen native ordained preachers, three licentiates, and forty-one native assistants, variously employed as teachers, colporteurs, and Bible readers. Connected with the missions were twenty schools, of which six were boarding-schools with about two hundred pupils, and nine were day-schools with three hundred pupils. The missions were among the Chickasaw Indians (27 organized churches and 1,008 members), in Mexico (3 churches, 220 members), Brazil (4 churches, 104 members, with an Institute at Campinas returning 57 pupils), Italy (a school at Milan), Greece, and China. The committee had contemplated a mission in Africa, but had not yet been able to establish it.

The receipts of the Tuscaloosa *Institute for the Instruction of Colored Preachers* had been \$3,678. Eleven Presbyterians and eleven students from other denominations had been instructed there, and four Presbyterians had been graduated.

The *General Assembly* of the Presbyterian

Church in the United States met at Atlanta, Ga., May 18th. The Rev. Dr. R. K. Smoot, of Austin, Texas, was chosen Moderator. The renewal of fraternal relations with the Northern Presbyterian Church was the predominant subject of discussion. An account of the action of both bodies in the matter is given below. A question of much interest was involved in the "Park case," which came up on appeal from the Synod of Memphis, and was supposed to involve the right of a colored presbyter to vote in the presbytery composed of whites. The Rev. Samuel Park, an uneducated colored man, a former slave, had been ordained by the Presbytery of Memphis to preach to the colored people, without being given the right to vote in the white presbytery. The formation of a colored presbytery appears to have been anticipated, but not carried into effect. Mr. Park was treated as a presbyter for seven years, when the issue was made as to his right to vote. The moderator decided that he had that right, and the presbytery, by a majority vote, overruled the decision of the moderator. The minority of the presbytery complained to the Synod of Memphis, which reversed the decision of the presbytery. The presbytery then complained to the Assembly against the decision of the synod. This brought up the constitutional question, Can the Presbyterian Church ordain a minister without giving him the right to vote in the presbytery? The Assembly decided that, as "perfect ministerial parity is an essential and fundamental principle of Presbyterian polity," and whereas Mr. Park had been duly and constitutionally ordained, and had been several times formally recognized by the presbytery as a duly ordained minister, it was the Assembly's judgment that he was in full ministerial connection with the presbytery, and consequently entitled to vote. Steps were taken to restore the management of the publishing interests of the Church, which were now carried on under arrangements with a company in St. Louis, to the exclusive control of the Assembly's Executive Committee, and to provide for the adjustment of the mortgage on the property in Richmond, Va., by the sale of bonds.

RESTORATION OF FRATERNAL RELATIONS BETWEEN THE NORTHERN AND SOUTHERN GENERAL ASSEMBLIES.—The Northern General Assembly, on the third day of its session, dispatched as a fraternal message to the Southern General Assembly, "Fathers and brethren, we send you our hearty salutation. See 1 Peter i, 2." In the Southern General Assembly, on the second day of the session, a resolution was offered for the appointment of a committee to convey cordial greetings to the Northern Assembly, and to express a willingness to co-operate, as far as practicable, with that body in the work of home and foreign evangelization. This was formally referred to a committee, with the understanding that it should be reported upon as soon as practicable. Before the committee was ready to report, the message from the

Northern Assembly was received, and answer was sent to it, with the approval of the Committee: "To the General Assembly of the Presbyterian Church in the United States of America, in session at Springfield, Ill. The General Assembly of the Presbyterian Church in the United States at Atlanta, Ga., sends cordial Christian salutations, wishing you grace, mercy, and peace." The Committee of the Southern Assembly to which the propositions for seeking a restoration of fraternal relations were referred, reported, with a detailed statement of reasons, against entertaining them. This report was not acceptable to the Assembly, and the committee having received several suggestions in the way of propositions offered for consideration of forms for messages to be sent to the Northern Assembly, presented as its unanimous conclusion the following paper, which was adopted by the Assembly with only three dissenting votes:

In order to remove all difficulties in the way of that full and formal fraternal correspondence for which, on our part, we are so earnestly desirous, we adopt the following minute:

That, while receding from no principle, we do hereby declare our regret for and withdrawal of all expressions of our Assembly which may be regarded as reflecting upon, or offensive to, the General Assembly of the Presbyterian Church in the United States of America.

*Resolved*, That a copy of this paper be sent by telegraph to the General Assembly now in session at Springfield, Ill., for their prayerful consideration, and, *mutatis mutandis*, for their reciprocal concurrence, as affording a basis for the exchange of delegates forthwith.

The Northern Assembly replied to this, May 20th:

The moderator is instructed to telegraph to the moderator of the General Assembly in session in Atlanta, that his telegram is received with warm enthusiasm by this Assembly, and, in order to remove all difficulties in the way of that full and formal fraternal correspondence between the two assemblies, which we are, on our part, prepared to accept, we adopt the following, to wit:

While receding from no principle, we do hereby declare our regret for and withdrawal of all expressions of our Assembly which may be regarded as reflecting upon, or offensive to, the General Assembly of the Presbyterian Church in the United States; and we renew the expression of our warm fraternal regard for all who compose its communion, and our readiness to exchange delegates forthwith.

In connection with this minute the moderator of the Northern Assembly telegraphed personally to the moderator of the Southern Assembly:

As a matter of information, and in justice to all parties, I would say that our Assembly's action on your basis for fraternal relations was taken *mutatis mutandis* with great heartiness, only two or three dissenting.

Pending our action the following resolution was passed:

*Resolved*, That, in the action now to be taken, we disclaim any reference to the action of previous Assemblies concerning loyalty and rebellion, but only to those concerning schism, heresy, and blasphemy.

We were led in prayer after final action, and sang the doxology amid grateful and profound feeling.

We shall welcome words from your Assembly concerning delegates.

To these papers the Southern Assembly replied:

If the action of your Assembly, telegraphed by your moderator to our moderator, does not modify the concurrent resolution adopted by your Assembly and ours, we are prepared to send delegates forthwith.

To which the moderator of the Northern Assembly replied:

The action referred to does not modify, but it explains, the concurrent resolution, and the explanation is on the face of the action. There is nothing behind it or between the lines.

The dissolution of our Assembly is near at hand. We may be ready for final adjournment this evening. An exchange of delegates is impossible before Tuesday. Shall we each appoint delegates this day to visit the respective Assemblies next year? We await your answer with deep and prayerful interest.

And to this the following reply was adopted, and sent by the Southern General Assembly:

ATLANTA, GA., May 27.

*To the General Assembly of the Presbyterian Church in the United States of America, in session at Springfield:*

It was unanimously resolved—1. That the Assembly does hereby declare its entire satisfaction with the full and explicit terms in which the General Assembly of the Presbyterian Church in the United States of America has expressed its reciprocal concurrence in the paper transmitted to our Assembly on fraternal correspondence.

2. That we do unfeignedly rejoice, and render thanksgiving to God for an event suited to take away the reproach of alienation between bodies holding the same standard of faith and order, and tending to bring peace to our borders.

3. That, inasmuch as it is impracticable at this late day to have an interchange of delegates, the Assembly does hereby appoint the following to your Assembly at its next session:

Principals: Rev. William Brown, D. D., Rev. T. A. Hoyt, D. D., Hon. B. M. Estes.

Alternates: Rev. R. P. Farris, D. D., Rev. H. C. Alexander, D. D., Hon. Patrick Joyes.

R. K. SMOOR, Moderator.

The Northern Assembly thereupon appointed the following delegates on its part:

Principals: Rev. S. J. Nicolls, D. D., Edwin F. Hatfield, D. D., and Hon. S. M. Moore.

Alternates: Rev. Arthur Mitchell, D. D., Rev. S. Irenæus Prime, D. D., and Hon. William E. Dodge.

III. UNITED PRESBYTERIAN CHURCH IN NORTH AMERICA.—The following is a summary of the statistics of this Church as they were reported to the General Assembly in May: Number of synods, 9; of presbyteries, 60; of ministers, 719, of whom 541 were returned as serving as pastors and stated supplies; of licentiates, 39; of students of theology, 50; of congregations, 826, of which 661 were served by pastors and stated supplies; of members, 84,573; of Sunday-schools, 809, with 8,647 officers and teachers, and 72,596 scholars; number of baptisms during the year, 629 of adults, and 3,720 of children. Amount of contributions:

For salaries of ministers.....	\$461,493
For congregational purposes .....	265,717
To the boards.....	140,716
General contributions.....	62,199
Total.....	\$930,125
Average per member.....	11 40
Average salary of pastors.....	865 00

Increase of members during the year, 1,636. The *Board of Church Extension* had received \$23,334, and reported its liabilities to be \$17,562, and that these were partly offset by a balance in the treasury of \$10,148.

The *Board of Ministerial Relief* had received \$10,625, and returned twenty-two beneficiaries receiving aid regularly. Its endowment now reached \$30,000, which was principally invested in Government bonds.

The *Board of Education* had received \$12,059, and reported investments and other assets to the amount of \$16,260. It had aided twenty students of theology.

The *Board of Freedmen's Missions* had received \$12,727, and reported an indebtedness, largely on account of real estate, of \$12,727. It had 718 pupils in its day- and boarding-schools, and 1,000 in Sunday-schools. Fifty-seven students from its schools were engaged in teaching, and had about 2,500 pupils under their charge. The board sustains a college and industrial school at Knoxville, Tenn., and a considerable school at Chase City, Va.

The *Board of Home Missions* had received \$39,344. It had 76 men able and willing to receive appointments, while the time of only 68 missionaries was asked for by the presbyteries. The 244 mission stations reported 11,564 members, and 12,964 attendants at Sunday-school.

The receipts of the *Board of Foreign Missions* had been \$77,872. The following report was made of the condition of missions on the first day of January, 1882: Presbyteries, 2; stations (places where foreign missionaries are located), 8; out-stations, 69; foreign ordained ministers, 15; female missionaries, including the wives of missionaries, 27 (unmarried, 13); native ordained ministers, 8; licentiates, 5; native teachers and helpers, 184; total foreign and native laborers in the two missions, 239; native congregations, 19; communicants, 1,565; increase, 370; decrease, 141. Total net increase, 229. Baptisms—adults, 130; infants, 189; total, 319. Sabbath-school scholars, 2,244; in other schools, 4,577; in all the schools, 6,151. Contributions for church and benevolent purposes, \$5,058; for schools, \$11,171; for books, \$6,248; total by the natives, \$23,272. Books sold and distributed (by the Egyptian mission), 27,150 volumes. Total value of the property in both missions, \$122,268. Of the members, 1,168 were in Egypt, and 397 in India.

The twenty-fourth *General Assembly* of the United Presbyterian Church in North America met at Monmouth, Ill., May 24th. The Rev. Dr. David Paul, of Ohio, was chosen Moder-

ator. The principal interest of the proceedings lay in the action which was taken on the subject of permitting the use of instrumental worship in the churches. An overture to rescind the rule prohibiting the use of instrumental music in worship had been sent down to the presbyteries to be voted upon. The report of the voting showed that 1,233 votes had been cast, of which 620½ were in favor of the repeal of the prohibition, and 612½ were against it, while nine persons entitled to vote were returned as not voting. The proposition thus appeared to be carried by a majority of eight, although it had failed to receive the assent of a majority of the whole number of persons entitled to vote. The Assembly, considering the measure lawfully carried, ratified the action, and declared, by a vote of 125 to 99, that the rule prohibiting the use of instrumental music was repealed. In connection with this action, it further resolved that its decision was not to be considered as authorizing instrumental music in the worship of God, but simply as a declaration of the judgment of the Church that there is no sufficient Bible authority for an absolutely exclusive rule on the subject. "That while there may be a liberty here, it is a liberty which in itself, especially in the present state of the Church, should be stringently regulated and kept from abuse, or any use that would conflict with the required simplicity of Christian worship." And it instructed the lower courts "to abstain, and have all under their authority abstain, from any action in this matter that would disturb the peace and harmony of congregations, or unreasonably disregard the conscientious convictions of members."

The party in the Assembly opposed to this action maintained that the measure had not been lawfully carried in the presbyteries, because it had not received a majority of the votes entitled to be cast, and contended that the nine votes not cast should be taken account of; and they presented a protest embodying their views, in answer to which a paper was filed by the committee having the subject in charge, vindicating the action of the Assembly, and its interpretation of the constitution of the Church.

A committee was appointed to prepare a brief statement of principles for use in mission work, and report to the next Assembly. The Assembly declared its readiness to co-operate with other churches in every proper way to secure the enforcement of legislation for the protection of Christian citizens in the enjoyment of their rights on the Lord's day.

No progress was made in the negotiations with the Associate Reformed Synod of the South for union.

IV. REFORMED PRESBYTERIAN CHURCH (SYNOD).—The statistics of this body, as reported at the meeting of the synod in May, show that the ten presbyteries of which it is composed include 108 ministers, 122 congregations, and

10,661 communicants. The total amount of collections, including \$79,147 for pastors' salaries, was \$191,893. The income for foreign missions was \$12,835.

The *Synod of the Reformed Presbyterian Church (O. S.)* met at New Concord, Ohio, May 24th. The law of tithes was declared binding on all Christians. Secret societies were denounced as unnecessary, sinful, opposed to the Master's example, and essentially hostile to the best interests of society. The "Anti-Chinese bill" was declared a breach of treaty obligations, opposed to the spirit of the age, a gross violation of the law of God, and calculated to arrest missionary effort among the Chinese. The merits of the labors which had been spent upon the revision of the New Testament were recognized, but the synod declared itself compelled to withhold its entire approbation from the revised version, while it recommended it for study. The views of the synod with reference to the incorporation of a recognition of the principles of the Christian religion into the Constitution of the United States were reiterated, and the sum of \$10,000 was appropriated in aid of the agitation of those views during the year. The question was brought up whether members of the Church in Iowa could, consistently with the Church's position respecting the Constitution of the United States, vote in the election then pending on the amendment to the Constitution of the State prohibiting the manufacture and sale of intoxicating liquors. The synod decided that the matter should be left to the presbyteries and sessions, who were to see that the principles of the Church, allowing all civil action not inconsistent with its dissent from the Constitution of the United States, were observed.

**V. REFORMED PRESBYTERIAN CHURCH (GENERAL SYNOD).**—The presbyterial reports of statistics of this body are incomplete, but the number of communicants is estimated at 6,700, of whom 3,500 are in the three eastern presbyteries, and 3,200 in the three western presbyteries. The receipts of the year for the Church Extension Fund had been \$653; for the Educational Fund, \$289; and for the Endowment Fund of the Theological Seminary, \$3,839. The appropriations for home missions were \$2,000.

The General Synod met at Darlington, Pa., in May. The Rev. W. J. Macdowell, of Brooklyn, N. Y., was chosen Moderator. The attempt in the previous year to establish a mission in Roorkee, India, had failed, through the refusal of the appointed missionary to serve.

**VI. CUMBERLAND PRESBYTERIAN CHURCH.**—The following is a summary of the statistics of this Church, as they were reported to the General Assembly of 1882:

Number of presbyteries, 117; of ministers, 1,422; of licentiates, 224; of candidates for the ministry, 197; of congregations, 2,587; of members, 115,749; of scholars in Sunday-schools, 58,184. *Contributions:* For home missions, \$11,218; for foreign missions, \$4,447;

for education, \$8,062; for publication, \$1,705; for church building and repairing, \$105,876; for pastors, \$183,037. Value of church property, \$2,059,950.

The *General Assembly of the Cumberland Presbyterian Church* met at Huntsville, Ala., May 18th. The Rev. S. H. Buchanan, D. D., of Little Rock, Ark., was chosen Moderator. The Board of Publication reported that its receipts had been \$43,240, and estimated its total resources at \$61,250. The Board of Missions reported that its cash receipts had been \$14,870, besides which considerable amounts, bringing the whole sum contributed for mission work to \$21,337, had been paid directly to missionaries by local treasurers, or through the Woman's Board. The mission in Japan, now four years old, was making good progress. The American Indian Mission had assumed the support of its missionary. The contributions for ministerial relief had been \$598. A board to take charge of that cause had been incorporated. A Board of Education also had been incorporated. The most important business before the Assembly was the consideration of the revision of the Confession of Faith, upon which a committee had been laboring for a considerable period. The whole work was discussed with considerable interest, but no essential differences were revealed on any of the points except the articles on Sanctification and Divorce. On the former subject, the following expression of faith was adopted: "The doctrine of sanctification is taught in the Word of God, and it is the duty and privilege of Christians to avail themselves of its inestimable benefits. The doctrine of sinless perfection is not authorized by the Scriptures, and is a dogma of dangerous tendency." The article on Divorce, as adopted, declares that "the marriage relation should not be dissolved for any cause not justified by the Word of God, and any immorality in relation to its dissolution is cognizable by the State courts." The delegates appointed by this Church to attend the meetings of the Presbyterian Alliance had not been admitted by that body, on the ground that the Church had not approved the constitution of the Alliance, and that the Alliance was not satisfied that its creed was in harmony with the consciences of the Reformed churches. The Assembly had since approved the constitution of the Alliance, and had referred the question of doctrinal position to a committee for consideration. That committee now made a report on the subject, which was adopted, in substance as follows:

The founders of the Cumberland Presbyterian Church, in their licensure and ordination by the Presbyterian Church, were permitted to "except the idea of fatality," as they believed it to be embraced in the doctrine of unconditional election and reprobation, and an atonement limited to a definitely elected number, as taught in the Westminster Confession of Faith. Subsequently, having for this been cut off from the parent Church, in fixing a standard of doctrine for the Cumberland Presbyterian Church, which they or-

ganized, they adopted the Westminster Confession of Faith, modified in the following particulars:

1. That there are no eternal reprobates.  
2. That Jesus died, not for a part only, but for all men, and in the same sense.

3. That *all* infants dying in infancy are saved.

4. That the Holy Spirit operates on all the world—for all for whom Christ died, in such a manner as to render all men responsible, and therefore inexcusable.

By these exceptions it will be seen that we have an amended form of the Westminster Confession of Faith; and, if this puts us out of harmony with the Consensus of the Reformed Confessions, we will be glad to have the fact clearly and unequivocally stated.

That this may be certainly done by the next Council, delegates were appointed to attend the next meeting of the Alliance, to be held in Belfast, Ireland, in 1884. On the subject of Sabbath observance, in reply to an invitation from a committee of the Southern Presbyterian Church to join in representations to the civil authorities against running railroad trains and delivering mails on the Lord's day, the Assembly declared that:

While we deplore the fact that trains are run and mail is delivered on the Sabbath, we do not see the consistency in invoking civil power to check the evil, while our business men make the demand for handling and carrying freight, and while ministers and church members demand the running of trains and the delivery of mails on the Sabbath. We therefore recommend that this General Assembly insist upon the better observance of this day by all the members of the Church, to the end that a public sentiment may be cultivated in its favor.

Co-operation was, however, pledged to "any judicious movement looking to the better observance of the Sabbath."

VII. PRESBYTERIAN CHURCH IN CANADA.—The dispute which arose, when the union of the Presbyterian churches in Canada took place in 1875, over the disposition of the Temporalities Fund, which had belonged to the organization known as the Presbyterian Church of Canada in connection with the Church of Scotland, was carried to the Imperial Privy Council, and was finally decided by that court early in the year. A number of ministers, who held aloof from the union and upheld the organization in connection with the Church of Scotland, resisted the transfer of the fund to the United Church. The moderators of the churches entering into the union secured from the Legislature of Ontario an act giving the possession of the fund to the United Church. This was contested in the courts, and, after a prolonged litigation, the Privy Council decided that the transfer was unlawful, and an injunction could be issued preventing the disposition of the funds for the advantage of the United Church.

VIII. ESTABLISHED CHURCH OF SCOTLAND.—The Endowment Committee of this Church reported to the General Assembly in May that during the year eight new parishes, with a population of 24,670, had been endowed, making a total of churches endowed since the beginning of the scheme 312. The total revenue for 1881 amounted to £14,847, against £18,594

in 1880, and £14,581 in 1879. The income for home missions had been £9,130, and the expenditure had been £81 more than that amount. The sum of £1,520 had been voted to 53 mission stations, £3,285 had been granted to 77 mission churches, and £5,982 had been voted toward the enlargement or erection of 17 churches. The Committee on Christian Liberality reported a decrease of £38,343 in the total amount of contributions, the present amount, exclusive of seat rents, being £281,503, against £319,847 in 1880. The Foreign Missions Committee reported an improved financial condition. Its entire revenue had been £22,853, showing a marked improvement on the revenues of former years, though it was still behind the sums raised by the Free and United Presbyterian churches for similar purposes. The income of the Jewish Mission had been nearly £1,000 below its expenditures; and only one convert was reported.

The *General Assembly* of the Church of Scotland met in Edinburgh May 25th. The Rev. Dr. William Milligan was chosen Moderator. For the first time the Assembly took formal notice of the agitation which is active in the other churches of the kingdom in favor of disestablishment, and resolutions were adopted to the effect that a committee be appointed to watch over and take any steps that might be thought necessary and advisable in regard to any question or measure brought before the Legislature affecting the interests of the Church; and, should opportunity arise, to aid by active good-will and co-operation in any movement having for its object the promotion of the cause of national religion and the interests of the true Protestant religion in Scotland; and that a pastoral letter be issued to the members of the Church, instructing them in its principles, and reminding them of the many blessings it had conferred on Scotland, and of the duty under which its members lay to be loyal to an institution which God had so blessed, and transmit it unimpaired to future generations. The case of the mission at Blantyre, Central Africa, in which the Assembly of 1881 had felt itself obliged to censure some irregularities in administration and cruel acts toward natives, was brought up again by the petitions of the Rev. Duff Macdonald asking to be personally exonerated from the censure, and of Mr. John Buchanan for a reconsideration of the case. The Assembly adopted an expression modifying its censure as against Mr. Macdonald, testifying to the good work he had done, and declaring that no good reason existed why he should not still be considered useful in Christian work. The present management and condition of the mission were represented to be wholly satisfactory. The statement of doctrine and formula to be used in the admission of native preachers, which had already met with the approval of the other Scottish Pres-

byterian churches, was referred to a special committee, to consider and report upon it at the next session of the Assembly.

A Scottish National Church Defense Society has been organized, to resist the movement for disestablishment. Its object is declared to be "to supply information respecting national religion and the true position of the Church of Scotland, to intensify a sense of corporate unity among all having common views on this subject, and especially to organize all members of the Church, and all favorable to national religion, in defense of the national position of the Church."

**IX. FREE CHURCH OF SCOTLAND.**—The total revenue of the Free Church of Scotland, as returned for the year at the meeting of the General Assembly in May, was £607,500, or £17,000 more than the revenue for the preceding year. The Committee of the Sustentation Fund reported an increase of £915 in the contributions. The Committee of Jewish Missions had received £6,680, and reported the conversion of seven Jews. The income of the Foreign Missions Committee had been £82,726, and exceeded the income of any previous year. The operations of the missions were now carried on in thirteen fields, specified as those of Calcutta and Lower Bengal, the Santhals, Bombay, Poona, Deccan, Central India, Madras, South Caffraria, North Caffraria, Zululand, Livingstonia, the New Hebrides, and Syria. Among the publications of the year were a grammar and a dictionary of the Aneityum language of the New Hebrides.

The *General Assembly* of the Free Church of Scotland met at Edinburgh, May 18th. The Rev. Dr. Robert Macdonald, of North Leith, was chosen Moderator. The session was occupied chiefly with the questions of disestablishment, the doctrinal position and relation to the Church of two of its members who had gained prominence as teachers and authors, and instrumental music, each of which was the subject of an active discussion. On the question of disestablishment, resolutions were adopted reaffirming the previous expressions of the Assembly in favor of disestablishment, and declaring that the Free Church "does not regard the maintenance of an established Church in Scotland as in present circumstances a legitimate or useful way of expressing national homage to Christ; while the continued maintenance of the existing establishment by the State is unjust and oppressive."

Petitions were presented from two Presbyteries asking for inquiry into a new book of Professor Bruce on "The Chief End of Revelation," which was regarded as divergent from orthodoxy on several points, and Dr. W. Robertson Smith's work on the "Old Testament in the Jewish Church," in which a line of thought was followed parallel with that of other works of the same author which had engaged the attention of previous assemblies. Principal Rainy moved, with reference to both

cases, that, in all the circumstances, the Assembly deem it neither necessary nor expedient to take action in the matter; and his motion was adopted.

The question of the use of instrumental music in the services of the Church was remitted to a committee, to report to the next Assembly. Twelve overtures desiring a change in the formula of subscription by deacons were taken up, and referred to a committee to consider the whole matter and report to the next Assembly. The Rev. George O. Cameron, of St. John's church, Glasgow, was appointed Professor of Hebrew in the college at Aberdeen, in place of Dr. W. Robertson Smith.

**X. UNITED PRESBYTERIAN CHURCH OF SCOTLAND.**—The total number of members of this Church was reported to the synod in May to be 174,557, or 575 more than were reported in the previous year. The total income of the Church was £383,370, £725 more than the income of the previous year, and representing a higher amount than had ever before been returned.

The *Synod* of the United Presbyterian Church of Scotland met in Edinburgh, May 8th. The Rev. Daniel Young, of Glasgow, was chosen Moderator. A decrease in the number of members of the Church had been reported at the last two previous meetings of the Assembly, but the statistical committee were able this year to report a net increase for the year of 575 members, although the number was still about 500 less than in 1878. The following declarations on the status of the foreign missions were adopted:

That the Synod and Presbyteries of Jamaica, and the Presbyteries of Biafra, Caffraria, and Rajpootana shall be regarded as standing in a federal relation to the Synod, and as being no longer constituent parts thereof; that any missionary presbyteries which may hereafter be formed shall be regarded as occupying the same position; that no formula shall be used within the bounds of a missionary presbytery until it has received the sanction of the synod; that no decision of a missionary presbytery or synod affecting the status of any agent of the Mission Board, appointed by the home Church, shall take final effect, unless all the parties and the Mission Board acquiesce therein, or, otherwise, till it has been confirmed by the synod; that, in regard to all matters of administration affecting the property of the synod, or the agents appointed by the Mission Board, no decision of a missionary presbytery shall have any effect unless it is acquiesced in by the board; that, in the event of congregations belonging to any of our missions joining with those of any other Church or Churches to form a United Missionary Presbytery, the rights of the home Church and its agents shall be reserved; and that members of missionary presbyteries, whether ministers or elders, and of other ordained missionaries of the Church, who are in this country during the synod meeting, shall, under conditions named, be entitled to sit in the court and take part in its deliberations, but without the right of voting.

The synod declined to recognize the council of the Presbyterian Alliance in India as a final court of appeal in matters concerning native members. A proposed statement of doctrine and formula for native elders, licentiates, and ministers was submitted, with an ex-

planation that it had been found needful in all the mission fields to have simple formulas for the native candidates. It was found by all missionaries that it would never do to make use of the Westminster Confession of Faith, the Larger and Shorter Catechisms, and the other standards in the native churches. Negotiations had been going on between the committees of the Established and Free Churches and of this Church for some time in regard to this matter; and the document now offered, which had been drawn up by the synod's committee, containing a simple statement of Christian doctrine, had been approved, in the main, by the committees of the Established and Free Churches. The statement and formula were adopted. The synod resolved to petition Parliament in favor of the disestablishment of the Church of Scotland. An effort was made to have the synod rescind the action it had taken in 1872 on the use of instrumental music in public worship, and adopt fresh restrictive legislation on the subject, but it failed.

**XI. PRESBYTERIAN CHURCH IN ENGLAND.**—This Church is made up, according to the statistical reports for 1882, of 275 congregations, besides several preaching-stations, 264 ministers with charges, 24 missionaries, and 56 other ministers, 56,099 communicants, and about 108,000 adherents. The number of church-sittings, as reported to the synod, was 141,903, showing an increase of 5,007 during the year. The Union Thanksgiving Fund, which was now completed, amounted to £155,839. The entire income of the Church for the year had been £208,226, against £205,603 in 1880. The Home Mission Committee presented a proposition that the synod undertake to create at least fifteen or twenty new congregations, each with a suitable church, within the next five years, and to raise £25,000 for church-building purposes. The Foreign Mission Committee reported that the annual expenditures on its work were not less than £13,500, while its income did not exceed £11,500. The missions were in the Amoy, Swatow, and Formosa districts of China, and returned 26 missionaries, 74 native evangelists, 37 native students, 316 adult baptisms during the year, and 2,342 communicants, with 1,000 baptized children. Five native pastors had been settled over self-supporting churches, a second native presbytery had been formed, a medical mission had been established and another one revived, and a home for Bible women had been opened during the year. The *Synod* of the Presbyterian Church in England met in London, April 23d. The Rev. William McCaw, of Manchester, was chosen Moderator.

**XII. PRESBYTERIAN CHURCH IN IRELAND.**—The statistics of this Church, presented to the General Assembly in June, show the entire number of communicants to be 102,825, as against 109,395 in 1881, and 122,792 in 1864. Reports were made of 558 congregations and 7 mission stations. The entire amount raised

by the Church for all purposes had increased by £7,016 over the amount reported in the previous year. The number of Sunday-schools connected with the Assembly was 1,101, with 8,552 teachers and 91,025 scholars. The Committee on Elementary Education reported that 828 of the 7,590 schools of the National Board were under Presbyterian management. The report of Belfast College stated that the Presbyterian Church now required from its theological students a university degree in arts, and also attendance on the Presbyterian College classes during the undergraduate course. The Committee on Colonial Missions reported that three ministers had recently been sent to New South Wales. Grants of £650 had been made to Canada and Manitoba College. Twenty-seven missionaries, of whom 21 were ordained ministers, had been employed in Canada, laboring with considerable success, especially among the French-speaking population.

The *General Assembly* of the Presbyterian Church in Ireland met in Belfast in May. The Rev. T. Y. Killen, of Belfast, was chosen Moderator. The question of the use of instrumental music in worship engaged a large share of attention. A resolution was adopted, by a vote of 360 to 345, ordering that the prohibition which the Assembly had issued in the previous year against the use of instrumental music in churches be carried out without delay. Afterward, a notice of motion, signed by sixty members of the Assembly, was read, stating that in the next year a proposal would be made to rescind the resolution which had been carried by so narrow a majority at the present Assembly. The Assembly recommended that the examinations before the Theological Committee, instead of referring to the theological views and personal experience of the candidates, should embrace such subjects as Hebrew, Biblical Criticism, Greek Testament, Christian Ethics, Church History, and Systematic Theology.

**XIII. REFORMED PRESBYTERIAN CHURCH IN SCOTLAND.**—The Reformed Presbyterian Synod of Scotland met at Glasgow in May. A report was presented by the National Reform Committee, which held that the fundamental evils of the British Constitution consist in the Word of God not being recognized as the standard of legislation; that the headship of Christ is invaded by the British Crown; and that episcopacy, with its unscriptural hierarchy and liturgy, was established and endowed. The holding of public meetings to agitate these views and the pressing of them upon members of Parliament were urged.

**XIV. WELSH CALVINISTIC METHODIST CHURCH.**—The following are the statistics of this Church as they were reported to the General Assembly at Bala in June. Number of ordained ministers, 600; of preachers, 357; of chapels, 1,324; of communicants, 118,635; of adherents, 279,189; of Sunday-school teachers, 22,262; of scholars in Sunday-schools,

163,373. Amount of contributions for the year, £157,348; value of church property, £1,000,000.

The *General Assembly* met at Bala, June 15th. The Rev. T. Levi, of Aberystwyth, was chosen Moderator.

**XV. WALLOON CHURCHES.**—The annual synod of the Walloon churches was held in Rotterdam in July. The churches are in a condition of decline, owing to the gradual dying out of the use of the French language, and only those at Rotterdam, Amsterdam, and the Hague, out of the seventeen organizations still in existence, seem to be prospering. In view of these facts, the synod appointed a committee to collect materials for a history of the churches since their foundation by the Walloons, who sought a refuge in Holland in the time of the Reformation.

**PROTESTANT EPISCOPAL CHURCH.** Whittaker's "Protestant Episcopal Almanac and Parochial List" for 1883 gives statistics for this Church of forty-eight dioceses and sixteen missionary jurisdictions (of which twelve are in the United States and Territories and four in foreign mission fields), of which the following is a summary: Number of bishops, 66; number of clergy (priests and deacons), 3,513, or, including the bishops, 3,579; number of parishes, 3,047; number of missions, 1,310; whole number of communicants, 348,888; number of candidates for orders, 396; number of ordinations, 132 of deacons, 116 of priests; number of baptisms, 45,817; of confirmations, 26,091; number of Sunday-school teachers, 34,675; of Sunday-school scholars, 308,591. Total amount of contributions by the churches, \$8,066,404.

"Whittaker's Almanac" gives an exhibit of the ratio of communicants to the population in five decades, beginning in 1830, which shows the advancing growth of the Church as follows: In 1830 there was one communicant to every 410 of the population; in 1840, one to every 308; in 1850, one to 292; in 1860, one to 214; in 1870, one to 175; in 1880, one to 151.

**THE PRESIDING BISHOP'S FIFTIETH ANNIVERSARY.**—The fiftieth anniversary of the consecration of Presiding Bishop Smith, which took place, together with the consecrations of Bishops McIlvaine, Doane, and Hopkins, October 31, 1832, was celebrated in the city of New York on October 31st. Special religious services were held on the previous day (Sunday), commemorative of the event, in St. Paul's Chapel, when appropriate discourses were delivered by the Bishop of Albany and the Rev. Dr. Hopkins. The celebration itself was marked by the presentation of congratulatory addresses from the clergy of New York, the bishops of the Church of England, the Episcopate of the Church in the United States, the Standing Committee of the Presiding Bishop's own diocese of Kentucky, and the Executive Committee of the Church Temperance Society. A chalice and paten were presented to the bishop, as a

memorial of the occasion, by churchmen of New York.

**BISHOP OF MISSISSIPPI.**—At the regular annual council of the Diocese of Mississippi, which met in April, the Right Rev. Dr. John N. D. Wingfield, Missionary Bishop of Northern California, was elected Assistant Bishop to Bishop Green, whose advanced age and infirmities rendered such an aid necessary. Bishop Wingfield declined to accept the appointment. A special council of the diocese was called, and met on November 28th, when the Rev. Hugh Miller Thompson, D. D., Rector of Trinity Church, New Orleans, La., was chosen assistant bishop.

**CHURCH TEMPERANCE SOCIETY.**—The *Church Temperance Society* was founded in 1881, with the aid of Mr. R. Graham, one of the general secretaries of the Church of England Temperance Society. Its general constitution is based on principles parallel with those on which that society is founded; and it is intended to furnish a platform on which total abstainers and non-abstainers may work together and in harmony for the promotion of temperance. It was organized with the presiding bishop as president, and the bishops of the dioceses were invited to act as vice-presidents. The formation of diocesan societies in the several dioceses was recommended, and work was begun at once for the establishment of local societies. In March, 1882, letters were sent out to the secretaries of the diocesan conventions, suggesting to them that the organizing secretary of the society desired, provided their bishops approved of it, to obtain at as early a day as possible the passage of some resolution giving official sanction to the work and objects of the society in their several dioceses, and inviting the choice of clerical and lay delegates to attend a National Church Temperance Convention to be held in the city of New York in October. These letters were answered by favorable replies. The convention was opened October 29th with services in the churches of the city, after which business meetings and general public meetings were held on the 30th and 31st. At these meetings papers were read or addresses made on "Prohibitory and Licensing Law in the United States," the "Non-observance of Liquor Law in New York City," "The Formation and Management of Parochial Temperance Societies," and "Juvenile Societies." At the final public meeting, over which the Bishop of Louisiana presided, Bishop Clark, of Rhode Island, spoke in commendation of the "broad, tolerant, and scriptural methods" of the society, and Bishop Dudley, of Kentucky, made an expression of similar significance.

**SOCIETY FOR THE INCREASE OF THE MINISTRY.**—The receipts of the *Society for the Increase of the Ministry*, for the year ending September 1st, were \$24,722; its expenditures were \$23,269. The invested funds amounted to \$54,927. Twenty-one scholars of the society had been admitted to holy orders since

the last annual report. The society had received, since its organization in 1857, the total sum of \$561,701, of which, after deducting the receipts from legacies and the income from invested funds, \$465,661 represented the contributions of the Church at large through this agency to the cause of ministerial education. Appropriations had been made in aid of 1,016 scholars, of whom 600 had been ordained ministers, and 518 were still in service.

**EVANGELICAL KNOWLEDGE SOCIETY.**—The receipts of the *Protestant Episcopal Society for the Promotion of Evangelical Knowledge*, for the year ending October 1, 1882, were \$8,687, and its expenditures were \$3,885. The society had put into circulation during the year books, tracts, and papers, the value of which was about \$6,700. Its monthly journal, "The Parish Visitor," had a circulation of about 20,000 copies.

**DOMESTIC MISSIONS.**—The general receipts of the *Committee for Domestic Missions*, for the year ending September 1, 1882, were \$126,734; adding \$70,956 of legacies left to the committee and \$30,683 of special contributions, the total receipts were \$228,373. The total sum available for the use of the committee was \$210,951, of which it had \$33,201 left at the beginning of the year. The committee employed as evangelizing agents—among white people, 12 missionary bishops, 292 clergymen, and 5 women helpers, or 309 in all; among colored people, 13 white clergymen, 15 colored clergymen, 5 lay readers, 4 teachers, and 18 women helpers—55 in all; among the Chinese, 1 Chinese clergyman; among the Indians, 1 missionary bishop, 12 white clergymen, 13 native clergymen, 1 white catechist, 9 native catechists, 3 teachers, and 13 women helpers—52 in all; the whole number constituting a total of 417 laborers. In support of the missions and missionaries, \$141,417 had been expended among white people, \$41,666 among Indians, \$13,667 among the colored people, and \$8,718 at the central office.

**FOREIGN MISSIONS.**—The receipts of the *Committee for Foreign Missions*, for the year ending September 1, 1882, had been \$173,848. Of this amount \$20,459 had been contributed by the Women's Auxiliary, and \$20,067 by the League in aid of the Mexican branch of the Church, for the benefit of the missions in Mexico. The missions were: in Greece, 1 teacher, 9 assistant teachers, and 700 students; West Africa, 16 missionaries (including the bishop), 27 other laborers, 560 native and Liberian communicants, 392 scholars; China, 11 missionaries and ministers, 94 other laborers, 320 native communicants, 738 scholars; Japan, 8 missionaries and ministers, 39 other laborers, 84 native communicants, 117 scholars; Hayti, 15 missionaries and ministers, 49 other laborers, 360 communicants, 199 scholars, 1,258 attendants on worship; Mexico, 14 missionaries and ministers, 94 other laborers, 929 native communicants, 555 scholars, 3,646 attendants on worship. The

list of missionaries includes the bishop in each mission, and, in Mexico, a bishop elect also, and the missionary physicians, when there are any; the enumeration of scholars includes those in day- and boarding-schools, but not those in Sunday-schools. The Mexican Church had been troubled with dissensions, and was represented as suffering from the want of accessible standards of doctrine and worship, the Mexican liturgy not having yet been completed.

**AMERICAN CHURCH MISSIONARY SOCIETY.**—The twenty-third annual meeting of the *American Church Missionary Society* was held in Philadelphia, Pa., in December. The total receipts of the society for the year had been \$24,677, and it had a balance in the treasury, on the 31st day of August, of \$2,894. Boxes of clothing and other articles had been sent to the missionaries, the total value of which was \$3,724. Thirty-seven missionaries had been commissioned, and four had resigned, leaving thirty-three, or four more than had been engaged during the previous year, in the field. Their fields of labor had been in fifteen dioceses and missionary jurisdictions. A new plan of administration had gone into operation on May 1st, under which the society was saved the expense of salaries for its secretaries and of office-rent. The offices of financial secretary and general agent had been abolished; the office of secretary had become voluntary, and was filled by a person who did its work gratuitously; and the necessary expenses of office-rent, printing, and other incidental matters were met by the gifts of a few friends especially contributed for those purposes. Thus every dollar of the income of the society now went directly to the support of its missionaries and the maintenance of its work.

**MISSIONS AMONG THE JEWS.**—The receipts of the *Church Society for Promoting Christianity among the Jews* for the year ending in April, 1882, were \$12,383; the expenditures were \$7,173, leaving a balance in the treasury of the society of \$5,210. During the year five new missionaries had been appointed, and two new missionary schools had been established, giving, as the full measure of the present operations of the society, fourteen missionaries, with four missionary day-schools and four industrial schools. In these schools were about two hundred children. Missions were established in most of the large cities of the country. The society had mission houses in Baltimore and New Orleans. A house had been bought in New York, in which it was intended to provide a chapel, with accommodations for the missionary day-school, the industrial school, the Sunday-school (of seventy Jewish children), a free reading-room, an office for the missionaries, and a residence for one of them. By an inflexible rule, no temporal aid was ever given to proselytes. Aid had been given to the parochial clergy in efforts among the Jews in their own localities, and this branch of the work was now carried on in thirty-four dio-

ceses and ten missionary jurisdictions; while the number of clergy engaged in it had nearly doubled, having been for the past year two hundred and twenty-two. The Jews in two hundred and one cities and towns were now directly reached by the society.

**THE CHURCH CONGRESS.**—The eighth annual *Church Congress* was held in Richmond, Va., October, 24th, 25th, 26th, and 27th. The opening address was delivered by the Bishop of Louisiana. Papers, to which were added extempore addresses in the general discussion of the several subjects, were read as follows: "The Position and Work of the Laity in the Church," Rev. George O. Shattuck, Boston, Mass., and Rev. Arthur Brooks, New York; "The Priestly and Prophetic Functions of the Christian Ministry," Rev. William R. Huntington, D. D., Worcester, Mass., Rev. S. D. McConnell, Philadelphia, Pa.; "The Relation of the Church to the Colored Race," Right Rev. W. B. W. Howe, D. D., Bishop of South Carolina, Rev. J. E. C. Smedes, Raleigh, N. C., and Rev. Henry Dunlop, Savannah, Ga.; "The Powers of Standing Committees," Rev. Hall Harrison, Ellicott City, Md., Hugh W. Sheffey, LL. D., Stanton, Va.; "Inspiration of the Scriptures," Rev. Frederic Gardiner, D. D., Middletown, Conn., Rev. A. M. Randolph, D. D., Baltimore, Md., John Dunlop, Esq., Richmond, Va.; "Christianity and the Criminals," Rev. H. C. Potter, D. D., New York city, Charles H. Kitchel, Esq., New York; "Requirements for Confirmation," Rev. H. Y. Satterlee, D. D., New York city, Rev. C. W. Rankin, D. D., Baltimore, Md.

**PRUSSIA.** (See GERMANY.)

**PUSEY, EDWARD BOUVIERE, D. D., D. C. L.** Born in 1800, he was second son of the Hon. Philip Bouvier (who assumed the name of Pusey by royal license), and nephew of the first Earl of Radnor. His early training was received at Eton. He entered Christ Church, at Oxford, was graduated with honors in 1822, and the next year was elected a Fellow of Oriel College. He took orders in the Church of England in 1824, and devoted himself assiduously for some years to Biblical studies, both at home and in Germany. In 1828 he was appointed Regius Professor of Hebrew in the University of Oxford, to which is attached a canonry in Christ Church. This professorship he held continuously until his death, and did good service to the cause of Hebrew learning and interpretation. The early associates of Pusey at Oxford were John Henry Newman and R. Hurrell Froude, elder brother of J. A. Froude, the historian. To these should be added Keble, Whately, Jelf, Hawkins, etc. In company with Newman and Froude, Dr. Pusey began, in 1833, that movement in the Church of England which is usually called by its admirers "the Anglo-Catholic movement," and which has had so marked and wide-spread effect upon both doctrine and practice in that Church. Pusey joined with Newman, Froude, and oth-

ers, in preparing and putting forth the somewhat famous "Tracts for the Times"; and though he contributed only four to the series, yet he was looked upon as the leading spirit, and as giving character to the entire movement. He worked efficiently for the end had in view by his elaborate treatise on "Holy Baptism" (1840), his "Letters to the Archbishop of Canterbury" (1842), and to the "Bishops of Oxford and of London" (1851), and his numerous single sermons and pamphlets. The party badges, "Puseyite" and "Puseyism," were coined and vigorously employed, and though Dr. Pusey earnestly protest-

EDWARD BOUVIERE PUSEY, D. D., D. C. L.

ed against this use of his name, as if he were the originator of a new sect in the Church, yet the epithets were persistently applied, and have continued to hold their place in current religious literature. On the publication (1841) of Newman's "Tract No. 90" (the last of the series), which taught that subscription to the Thirty-nine Articles of the Church of England may be made by any clergyman who maintains his right to interpret them according to "Catholic" doctrine, Dr. Pusey was called upon to defend Newman's course and views. This he did in a letter to Dr. Jelf (1841), which excited much attention at the time. In 1843 he preached a sermon before the university in which he advocated the doctrine of the real presence in the Lord's Supper. For this sermon he was brought before a board of judges, under a university statute, was condemned by them as holding substantially the Roman dogma of transubstantiation, and was suspended from the office of university preacher for three years. Although on most intimate terms with New-

man, Dr. Pusey did not join the latter in his secession to the Roman obedience in 1846, but remained in his place in the Church of England. Possessing wealth and its advantages, he gave his best energies to the guiding the Anglo-Catholic revival. The success of this great movement, which is patent to all observers, was largely due to Dr. Pusey's high and deserved reputation for piety, purity of purpose, and learning; and the strength of the High Anglican or Ritualistic party in England is now greater than it has ever been since Archbishop Laud's and the non-jurors' days. Dr. Pusey was not only a diligent student, but also published a large number of volumes during his long connection with the University of Oxford. He was one of the editors of the "Library of Translations from the Fathers," and of the "Anglo-Catholic Library," and adapted for use among English Church people a number of Roman Catholic books of devotion, such as Scupoli's "Spiritual Combat," Surin's "Foundations of Spiritual Life," St. Anselm's "Prayers and Meditations," etc. His chief publications were: "Causes of Rationalistic Character

of Theology in Germany" (1828); "Remarks on the Benefits of Cathedral Institutions" (1833); "Parochial Sermons" (8 vols., 1848-'69); "Marriage with a Deceased Wife's Sister" (1849); "The Royal Supremacy not arbitrary," etc. (1850); "The Doctrine of the Real Presence, as contained in the Fathers" (1855); "The Real Presence the Doctrine of the English Church" (1857); "History of the Councils of the Church, A. D. 51-381" (1857); "The Minor Prophets, with Commentary," etc. (1860-'62); "Letter on the Essays and Reviews" (1861); "Daniel the Prophet," nine lectures (1864); "The Church of England a Portion of Christ's one Holy Catholic Church, and a Means of restoring Visible Unity, an Eirenicon," a letter addressed to John Keble, and in reply to Manning's letter to Pusey (1865); "A Letter justifying holding Confessions for Forty Years past" (1878); "What is of Faith as to Everlasting Punishment? In reply to Dr. Farrar's Challenge, in his 'Eternal Hope'" (1880); and "Parochial and Cathedral Sermons" (1882), collected and issued just before his death.

## R

### RAILROADS OF THE UNITED STATES.

Statistics relating to the railroad corporations of the United States, their financial condition, business operations, etc., were first collected by the national Government in 1880, and are now reported by the tenth census. The returns show that on June 30th of that year there were

in the United States 1,482 companies, 87,891 miles of completed road, 10,016 miles under construction, and 41,029 miles projected. The average (cost, value, and amounts), per mile of road completed and operated, of assets and liabilities, earnings, income, expenses, profit, dividends, and balance retained were as follow:

ITEM.	Amount.	Average per mile of road completed and operated.
Cost of construction of roads .....	\$4,112,367,176*	\$47,887†
Cost of equipment .....	418,045,458	4,817
Value of lands owned (including buildings) .....	108,319,845	1,191
Value of telegraph lines and miscellaneous .....	204,918,196	2,361
Stock and bonds owned (issued by other companies) .....	848,800,182	8,962
Total permanent investments .....	\$5,182,445,807	\$59,718
Cash assets .....	358,973,981	4,079
Profit and loss to credit .....	\$110,697,228	\$1,275
Total permanent and cash assets .....	\$5,536,419,788	\$63,797
Capital stock paid in .....	\$2,618,606,264	\$30,117
Funded debt .....	2,890,915,402	27,551
Total stock and funded debt .....	\$5,004,521,666	\$57,668
Unfunded debt .....	421,200,894	4,854
Total capital paid in and borrowed .....	\$5,425,722,560	\$62,522
Gross transportation earnings .....	\$580,450,594	\$6,689
Total income (all sources) .....	661,295,391	7,620
Transportation expenses .....	352,800,120	4,065
Total expenditures (all classes) .....	541,950,795	6,245
Net transportation earnings .....	227,650,474	2,628
Net income or profit .....	119,344,596	1,375
Dividends declared .....	70,650,842	813
Amount retained .....	48,794,254	562

\* This amount includes funds expended upon partly completed miles of road under construction. It was impossible to obtain from railroad companies the respective amounts paid out for an exact number of miles entirely completed.

† Average taken upon 86,732 miles of road operated by the companies reporting transportation earnings.

INCOME OF.—The aggregate income is shown in the following exhibit:

ITEM.	Amount.	Total.	Aggregate.
Gross transportation earnings.....		\$580,450,594	
Income from all other sources—rents.....	\$58,548,710		
Income from all other sources—interest and dividends.....	27,801,087	80,844,797	\$661,295,891
Less:			
Transportation expenses.....	\$852,800,120		
General expenses of lessor companies.....	1,879,848		
Interest on funded debt.....	126,442,810		
Interest on unfunded debt.....	9,087,798		
Rentals.....	51,790,719		
		\$541,950,795	
Deduct expenses over earnings.....	\$1,427,581		
Deduct expenses over other income.....	18,286,921	14,714,502	527,286,293
Net income or profit reported by companies having no deficits.....			\$184,059,098
Dividends declared:			
On preferred stock.....	\$6,893,268		
On common stock.....	63,657,079		
		\$70,550,342	
Deduct dividends declared by companies having no net income.....		529,974	70,020,868
Balance retained.....			\$64,088,780*

ASSETS OF.—The aggregate assets and liabilities appear in the following balance-sheet:

ASSETS.			LIABILITIES.		
Item.	Amount.	Total.	Item.	Amount.	Total.
Construction of roads.....	\$4,112,867,176		Capital stock paid in—preferred.....	\$904,471,942	
Equipment.....	418,045,458		Capital stock paid in—common.....	2,309,184,322	\$2,618,606,264
Lands.....	108,819,845				2,890,915,402
Stock (of other companies).....	184,866,527		Funded debt.....		
Bonds (of other companies).....	158,988,605		Unfunded debt:		
Telegraph lines and miscellaneous.....	204,918,196		Interest unpaid.....	\$68,750,288	
Total permanent investments.....		\$5,182,445,807	Dividends unpaid.....	18,059,968	
Cash.....	\$61,211,518		Notes payable.....	85,573,270	
Bills receivable.....	81,064,428		Vouchers and accounts.....	256,817,368	421,200,894
Due from agents and companies.....	79,814,155				
Materials and supplies.....	44,294,901		Profit and loss (reported by others).....		288,191,598
Sinking fund.....	20,488,759		Total liabilities.....		\$5,658,914,158
Debit balances.....	117,100,225				
Total cash and other assets.....		858,978,981			
Profit and loss (reported by some companies).....		122,494,870			
Total assets.....		\$5,658,914,158			

EARNINGS.—The aggregate transportation earnings were:

ITEM.	Amount.		Total.	
		Per cent.		Per cent.
Local passengers.....	\$98,321,340	68·28		
Through passengers.....	44,514,898	80·89		
All other passengers.....	1,265,976	0·88		
Total.....		100·00	\$144,101,709	24·83
Express.....			8,828,259	1·52
Mails.....			10,472,818	1·80
Local freight.....	\$283,688,202	56·16		
Through freight.....	176,909,181	42·51		
All other freight.....	5,548,425	1·33		
Total.....		100·00	416,145,758	71·69
Earnings not analyzed.....			902,055	0·16
Aggregate.....			\$580,450,594	100·00

EXPENSE OF TRANSPORTATION.—The following statement exhibits the aggregate transportation expenses:

\* Against this balance stand the deficits of other companies, \$15,244,476.

ITEM.	Amount.	Per cent.	Per cent of earnings.
Repairs of road-bed and track.....	\$39,608,076	11.23	6.82
Renewals of rails.....	17,243,950	4.89	2.97
Renewals of ties.....	10,741,577	3.04	1.85
Repairs of bridges.....	9,009,097	2.55	1.55
Repairs of buildings.....	7,644,121	2.17	1.32
Repairs of fences, crossings, etc.....	1,480,926	0.42	0.25
Telegraph expenses.....	8,576,477	1.01	0.62
Taxes.....	13,288,819	3.77	2.29
Total maintaining road and real estate.....	\$102,583,043	29.08	17.67
Repairs of locomotives.....	\$21,830,968	6.19	3.76
Repairs of passenger, baggage, and mail cars.....	10,553,824	2.99	1.82
Repairs of freight-cars.....	22,595,558	6.40	3.89
Total repairs of rolling-stock.....	\$54,985,340	15.58	9.47

Locomotive service.....	27,239,568	7.72	4.69
Agents and station service.....	36,767,299	10.42	6.83
Station supplies.....	2,571,938	0.81	0.49
Salaries of officers and clerks.....	12,215,580	3.46	2.10
Legal expenses.....	2,457,905	0.70	0.42
Insurance.....	926,694	0.26	0.16
Stationery and printing.....	2,692,011	0.76	0.47
Outside agencies and advertising.....	4,787,811	1.34	0.82
Contingencies and miscellaneous.....	21,328,836	6.04	3.67
Loss and damage, freight.....	974,526	0.28	0.17
Loss and damage, property and cattle.....	1,103,761	0.31	0.19
Loss and damage, personal injuries.....	1,377,978	0.39	0.24
Expenses not analyzed.....	621,077	0.18	0.11
Total operating and other expenses.....	\$195,281,737	55.84	38.63
Aggregate transportation expenses.....	\$352,800,120	100.00	60.78
Net earnings.....	\$229,078,055	.....	.....
Less expenses over earnings by some companies.....	1,427,581	.....	.....
Total.....	\$227,650,474	.....	39.22

NET EARNINGS.—The disposition of net earnings is shown by the following statement:

Net earnings.....	\$229,078,055
Less expenses over earnings.....	1,427,581
Net earnings of whole system.....	\$227,650,474
Paid:	
Fixed charges, less income from other sources than earnings....	\$187,270,827
	80,844,797
General expenses of lessor companies.....	1,879,843
Total.....	\$106,426,080
Dividends declared.....	70,550,342
Total expended.....	\$178,856,220
Balance held, whole system.....	48,794,254
Total.....	\$227,650,474
Actual balance reported by some companies as surplus.....	\$64,033,730
Deficits reported by others.....	15,244,476
Net balance for system.....	\$48,794,254

Of the 1,016 companies which report an income (whether operating, lessor, or otherwise), 666 obtained a net income aggregating \$134,059,098, and 350 report none whatever.

There are 1,165 companies which report an aggregate capital stock (paid in) amounting to \$2,613,606,264, of which 623 have earned a net

income or a profit upon their stock. The balance of 542 companies earned no profit whatever; 373 of the latter created deficits or had their income balanced by expenditures, and 169 companies had not yet commenced operations, their roads being under construction.

The net income or profit available for dividends upon stock of these 623 companies (\$2,103,068,246, or 80 per cent of the aggregate for the United States) amounts to \$132,989,336, and is an average per cent of profit upon such stock of 6.32.

The balance of stock is that which bears no profit, and amounts to \$510,538,018, or nearly 20 per cent of the aggregate report for the country. Of this amount \$449,905,903 is stock of companies having deficits, or having their income balanced by expenses, and \$60,632,115 is stock of companies whose roads are yet under construction.

PROFIT PER CENT.—The average per cent profit, upon both capital stock paid in and funded debt, was:

Capital stock and funded debt.....	\$5,004,521,666
Total income.....	661,295,391
Total expenditures, less interest on funded debt.....	415,503,485
Net income or profit.....	245,786,906

The above shows the income to be 13.21 per

cent of stock and funded debt; expenditures, less interest on funded debt, 8.30 per cent of stock and funded debt; net income or profit, 4.91 per cent of stock and funded debt. If those companies are only taken which report net income, and those which report deficits are excluded, then the net profit upon the stock and funded debt of such companies in the United States will average 5.2 per cent. The financial results are:

Gross earnings.....\$580,450,594  
Transportation expenses.....352,800,120

Net earnings.....\$227,650,474  
Less fixed charges and general expenses of lessor companies, reduced by income from all other sources than earnings.....108,805,878

Amount available for dividends.....\$119,844,596

Stock (preferred and common).....\$2,613,606,264  
Per cent earned upon stock.....4.566  
Per cent declared upon stock.....2.699  
Per cent held.....1.867

**MILEAGE STATISTICS.**—The following are revenue train mileage statistics of the railroad system of the United States:

Total miles of road operated.....86,792  
Earnings per mile.....\$6.688  
Expenses per mile.....4.065  
Net earnings per mile.....2.623

Freight-trains:.....251,022,710  
Earnings per mile.....\$1.65  
Expenses per mile.....93  
Profit per mile.....67

Passenger-trains:.....138,225,621  
Earnings per mile (including express and mails).....\$1.18  
Expenses per mile.....76  
Profit per mile.....43

**FREIGHT AND PASSENGERS.**—The details of the freight and passenger traffic are as follows:

Freight tonnage: Number of tons carried....290,897,895  
Average miles hauled.....111  
Tons, one mile.....32,348,846,693  
Revenue.....\$416,145,758  
Receipts per ton per mile....1.29 cents.  
Cost per ton per mile.....0.76 cents.  
Profit per ton per mile.....0.53 cents.

Passengers: Number carried.....269,583,340  
Average distance.....23 miles.  
Passengers carried one mile....6,159,240,914  
Revenue.....\$144,101,709  
Receipts per passenger per mile.\* 2.38 cents.  
Cost per passenger per mile.....1.71 cent.  
Profit per passenger per mile....0.61 cent.

Freight traffic: Tons carried, local.....153,163,276  
Tons carried, through.....187,513,992

Tons carried, total†.....290,897,895

Passenger traffic: Passengers, season‡.....28,665,251  
Passengers, local.....244,178,377  
Passengers, through.....25,404,963

Passengers, total.....269,583,340

Freight tonnage: \$ Local.....14,252,169,778  
Through.....13,075,963,632

Revenue: Local.....\$233,688,206  
Through.....192,457,554

Average rate per mile: Local.....1.64 cent.  
Through.....1.01 cent.  
Local and through...1.29 cent.

Passengers carried one mile are not separately specified for local and through.

**EQUIPMENT.**—The equipment of all the roads in the United States comprised 17,412 locomotives, 12,330 passenger-cars, 4,475 mail, express, and baggage cars, 375,312 freight-cars, and 80,183 other kinds of cars; cost of equipment, \$418,045,459. The aggregate number of all employés was 418,957; amount of yearly pay-rolls, \$195,350,013.

**ACCIDENTS.**—The following is a condensed summary of the reported accidents on all the roads in the United States during the census year:

TO WHOM HAPPENED.	Through causes beyond their control.		Through their own carelessness.		Aggregate.		Total accidents.
	Killed.	Injured.	Killed.	Injured.	Killed.	Injured.	
Passengers.....	61	331	82	213	143	544	687
Employés.....	260	1,004	668	2,618	923	3,617	4,540
All others.....	43	108	1,429	1,945	1,472	1,451	2,923
Unspecified.....	...	...	...	...	3	62	65
Total.....	364	1,488	2,174	4,174	2,541	5,674	8,215

**RED-CROSS SOCIETIES AND THE LAWS OF WAR.** Many attempts have been made to bring about an international agreement for mitigating the horrors and mortality of battle, since the improvements in the rifle and the adoption of universal military service have rendered war so much more calamitous and fatal than in former times. The first successful movement of this kind was started at the same time that the civil war was raging in the United States.

**CONFERENCES.**—A conference of jurists and others interested in this object was held in Geneva in 1863. The Government of Switzerland approved of the project for an international compact which they drew up, and the potent support and sanction of the French

Empire were won. At a second conference the ten articles of the Geneva Convention were signed, August 22, 1864, by plenipotentiaries of France, Prussia, Italy, Spain, Holland, Belgium, Denmark, Sweden, Switzerland, Portugal, Württemberg, Baden, and Hesse-Darmstadt. This convention "for the amelioration of the condition of the wounded of armies in the field" imposes upon the victorious army the duty of caring for the enemy's wounded, and protects all surgeons and nurses and their hospital stores and materials. Military and field hospitals, in which wounded are cared for, are made neu-

\* Not including express or mails.

† This amount includes 220,127 tons of companies which omitted to specify them as through or local.

‡ Included in amount of local.

§ Of freight tonnage 20,713,261 tons were left unspecified.

tral, and all the attendants are to be free from molestation; non-combatants bringing help to wounded are not to be hindered, and houses where wounded are must not be disturbed. The permanently disabled are to be released and allowed to return to their own country. In 1865 Great Britain, Turkey, Greece, and Mecklenburg-Schwerin accepted the conditions of the convention; in 1866 Austria, Bavaria, and Saxony joined the other nations, Russia in 1867, and the Pontifical States in 1868. In the latter year fifteen other articles, extending the provisions of the convention to naval warfare, and enlarging the rights of the sanitary *personnel*, sick, and wounded, as neutrals, were added. The majority of the states, however, refused to ratify these supplementary articles. The badge by which the neutralized persons and places were to be recognized, the Swiss flag with the colors reversed, was stated in the articles of the compact. It is a red cross on a white ground. This symbol protects not only the regular hospital service of the belligerent armies, but volunteer nurses and surgeons. Societies of the Red Cross were formed in the different countries of Europe, and, in the tremendous wars which followed the conclusion of the humane compact, the governments found in the volunteer corps which gathered at the seat of war from the various countries of Europe an invaluable aid to their sanitary departments. The St. Petersburg declaration of November 16, 1868, was a corollary to the Geneva Convention. It forbids the use of certain kinds of explosive shot as unnecessarily deadly, on the principle that the legitimate aim of warfare is to cripple the military resources of the enemy merely, and consequently weapons which destroy life and maim, when slighter wounds would be equally effective in disabling the enemy, are inhumane and illegitimate. Fifteen European states agreed to the proposition of the Russian Government, including all the great powers, besides Turkey and Persia. In 1874 Persia, Roumania, and San Salvador subscribed to the Geneva Convention; Montenegro in 1875; Servia in 1876; the Argentine Republic, Bolivia, and Chili in 1879; and Peru in 1880.

**ORGANIZATION COMPLETED.**—An international organization was completed and cemented at a conference of Red-Cross societies held at Berlin in April, 1869. Measures were adopted with regard to the establishment of national societies in the different countries and their relations to the military authorities, and to provisions for the service in war-time, and the technical preparation and equipment. The international association embraced in its objects also the relief of the injured and suffering in calamities occurring in time of peace. A quarterly bulletin, published at Geneva, was established as the official organ of the association. The central control of the organization is vested in an international committee permanently established at Geneva. The national

societies and their branches, recognized by their several governments, receive credentials from this committee to the authorities of the belligerent states when they engage in the active work of the association in time of war. The International Committee consists of seven members. The president, Gustave Moynier, has held that office since the first organization of the association in 1863.

**OBJECTS.**—The original object of the association, the reform of the laws of war in the direction of greater humanity, has been abandoned for the magnificent field of practical work which was opened by the results of its original efforts. The theoretical aims were made the special task of an allied organization, the *Institut de Droit International*, which was founded by some of the men who gave the first impulse to the movement. The *Institut* published in 1880 a manual of the laws of war, revised in accordance with the newly accepted doctrines, which met with a favorable reception in some countries, notably in Russia, France, Belgium, and the Netherlands. The eminent Bluntschli, lately deceased, besought on behalf of the society the approval of Field-Marshal Moltke for the new code, and received, in the early part of 1881, a remarkable reply. The great German strategist eulogized war as "an element in the order of the world ordained by God," in which the noblest virtues, courage, self-abnegation, and faithfulness to duty are developed, and without which "the world would stagnate and lose itself in materialism." He declared that an international code of war can have no sanction or authority to execute it, and the only safeguards against the excesses of soldiery are discipline and an adequate commissariat maintained on the part of the government, and the religious, moral education of soldiers, and honor and sense of justice of commanders. The proposition that an invading army should take only "in proportion to the resources of the country" he declared impossible to carry out. He expressed disagreement with the declaration of St. Petersburg, believing that the more terrible the engines of destruction, and the sharper and shorter the conflict, the better for the nations engaged. The position of the reformers on the mooted question of the belligerent rights of irregular forces, volunteer corps, and those who take up arms "spontaneously" to defend their homes, the German commander could not be expected to accept after the relentless reprisals which were taken upon these classes of combatants during the French invasion. The Swiss, who have from ancient times owed their independence to their volunteer organizations, and the Norwegians, who are proud of their *Landstorm*, and hold the right of bearing arms to be the guarantee of popular liberty, are specially desirous to secure the recognition of volunteer bodies. They agree that these forces should be under the orders of the regular commanders, and that they should wear some distinguishing

uniform or badge. The establishment of the rights of people who rise in a mass to repel invasion is more hopeless, and all the nations of Europe will probably be forced to maintain a general *Landwehr* organization.

**PROPOSITIONS.**—In 1874 a further proposal to extend the provisions of the Geneva Convention emanated from the Russian Government. In the conference which met at Brussels to consider the propositions presented by Baron Jomini, fifteen states took part. Several of them raised objections to the project of a declaration, which was agreed upon by a majority of the representatives, August 27, 1874; and a new proposition was formulated by the Russian Government in the beginning of 1876. The Russo-Turkish War intervened, and the negotiations were not subsequently resumed; but in that war Russia put into practice certain stipulations of the Brussels declaration which relate to the treatment of prisoners of war.

With the authorization given by these treaties, the association of national Red-Cross societies was founded, and soon grew up to be the most potent and extensive non-religious organization for merciful works known to modern times. Their beneficent activity commenced in the Franco-Prussian War. Many hundreds of volunteer surgeons who did yeomen's service in both camps were maintained by the Red-Cross societies of England, Russia, Austria, Italy, and the smaller states. The German Red Cross established communications with the French, news of the wounded and captive were transmitted to friends across the lines, and the contributions to the French prisoners in Germany were forwarded from France through this agency. The German Central Committee dispensed in their own work during the brief campaign over \$13,000,000. The English Red Cross in the Turkish War displayed great energy and bravery as well as munificence in fulfilling its benevolent mission. The expenditures of the Russian and English societies during that war were enormous. In the decade which followed the definite organization of the international association in 1869, the Red Cross has been active at the scene of conflict in every war where it could receive the protection guaranteed in the treaty—in Spain, Bosnia, South America, South and East Africa, in Central Asia on the Indus, at Cabool, and in the Turkoman steppes, where the Russian volunteer sanitary column took under its protection the Turkoman women and children who were being ruthlessly massacred by the Russian soldiery in revenge for the courageous defense of Geok Tepe.

**SOCIETIES.**—The organization of the Red-Cross societies and their relations to the state and military authorities are very different in the various countries notwithstanding the efforts made at the conference of Berlin to establish definite and uniform rules. The Netherlands Society, which, like the English, has

been particularly active in practical work—in the Caucasus, South Africa, and Acheen—was founded by the King, and occupies a semi-official position, being placed under the control of the Ministry of War, and receiving an allowance from the military budget. In the other countries where the societies were initiated by the governments, the relations to the military authorities are close. In Sweden the first president of the society was the Crown Prince, the present King, and the organization is under the patronage of the Marine Department. In Spain the society was founded by Queen Isabella in 1864, and amalgamated with the order of the Knights of Saint John. In Italy also, as well as in Austria, England, Prussia, and elsewhere, the orders of Saint John or of Malta united with the Red Cross, which, under the patronage of the King, attained a high degree of organization and established regular relations with the army. In France the Red Cross was founded in 1864, and promoted by Napoleon III. In the war of 1870 it was more efficient than the sanitary department of the army. It has a highly developed and centralized organization, and is composed of about one hundred different branches attached to the military districts and adapted to special objects. In Belgium, where much has been done for sanitary science, and in Switzerland, where the Red Cross originated, the organization and development of the societies have made little headway. In Russia the women took an active part in establishing the Red-Cross societies. These attained an extraordinary development during the Turkish War, and have since been very active in the Asiatic campaigns. The central organization has no organic connection with the army, but the workers of the society are welcomed and aided by Russian commanders. In Germany and Austria the organization is highly developed, and enjoys an officially recognized position, with the advantage or disadvantage of official inspection and regular relations with the Ministry of War. In Austria-Hungary, as well as in Russia, and, to a greater or less extent, in Italy, England, Belgium, the Netherlands, and the Scandinavian countries, the ladies were prominent in the development of the societies. In England, which has contributed greater actual services under the Red Cross than any other country, and with greater disinterestedness, there is no centralized organization. In the great European wars three separate associations directed the work of benevolence—the National Society of the Red Cross, the Order of St. John, and the Stafford House Committee. The first two have branches corresponding to the plan adopted by the international congress, but lack a central control.

**POSITION OF THE UNITED STATES.**—The United States was the only great power remaining which did not officially recognize the rights to special protection secured to the bearers of the Red-Cross symbol, and which did not possess a national society. Yet the most magnifi-

cent example of voluntary sanitary service in all history was displayed during the civil war, when seven thousand societies engaged in the work, and the Sanitary Commission dispensed over \$20,000,000, besides the contributions of the individual societies. The improvements in military sanitation developed in the American war, principally by this volunteer organization—the means of speedy treatment, and of averting hospital infection, such as the field hospitals, and hospital tents, cottage hospitals, etc., the ambulance system, convalescent camps, etc.—were the basis of the whole system of the Red-Cross service, which copied also the intelligence bureaus and other features of the work of the Sanitary Commission.

The conferences at Geneva were attended by the United States Minister to Switzerland, but, pending the war of secession, the American Government was unwilling to join in the agreement. The principles of the treaty were practically observed in the American war, and the magnificent services of the volunteer sanitary organizations were a cheering example to the humane persons who were striving in this cause in Europe. Since then the International Red-Cross Association has several times appealed to the United States Government to join in the compact, but the delicate questions of maritime law involved in the treaty, and other political considerations, have hitherto deterred the Federal Government from taking the step. In the autumn of 1881 a final effort was made to gain the agreement of the United States to the stipulations of the convention of Geneva, and assurances were given by President Arthur of his willingness to accede. The President and the Senate subsequently ratified the convention; the treaty was signed March 16, 1882. Pending the action of the Government a national society was formed and incorporated under the laws of the District of Columbia, bearing the name of the American Association of the Red Cross. Miss Clara Barton was chosen president of the society. The constitution of the association specifies as its principal object—

To organize a system of national relief and apply the same in mitigating the sufferings caused by war, pestilence, famine, and other calamities.

Another article provides that—

This association shall hold itself in readiness, in the event of war or any calamity great enough to be considered national, to inaugurate such practical measures in mitigation of the suffering and for the protection and relief of sick and wounded as may be consistent with the objects above indicated.

**REFORMED CHURCHES. I. REFORMED CHURCH IN AMERICA.**—This Church is composed of four particular synods, viz.—the Particular Synods of New York, Albany, Chicago, and New Brunswick—with thirty-three classes, which reported to the General Synod in June, 1882, statistics of which the following is a summary: Number of churches, 509; of ministers, 545; of families, 43,611; of communi-

cants, 80,167; of baptized non-communicants, 29,669; number of Sunday-schools, 687, with 84,511 scholars; number of baptisms during the year, 4,051 of infants and 859 of adults. Amount of contributions for religious and benevolent purposes, \$200,248; for congregational purposes, \$902,368.

The several boards having the care of the benevolent enterprises of the Church made reports to the General Synod in June, of which the principal items are as follow:

*Board of Education.*—Total receipts, \$8,670; net indebtedness, \$5,625, against \$7,093 in 1881; number of students aided during the year, 63.

*Board of Publication.*—Receipts from business, \$16,299; profits, \$530; assets, \$11,769. Number of new publications (including official papers and documents), 11.

*Widows' and Disabled Ministers' Fund.*—Total amount of the Widows' Fund, April 30, 1882, \$55,391; amount of income from all sources, \$3,557; cash on hand, \$5,599. Amount of the Disabled Ministers' Fund, \$49,614; amount of receipts during the year, \$4,598; cash on hand, \$3,915.

*Board of Domestic Missions.*—Total receipts, \$29,030; expenditures, \$26,086. Sixty-four missionaries had been employed in 78 missions, of which 37 were in the West and 41 in the East, with, in all, 4,077 families and 5,979 members in communion. Connected with the missions were 89 Sunday-schools, having an average attendance of 8,247 persons. Eleven churches had become self-supporting during the year. The receipts for the Church-Building Fund had been \$9,186; and the expenditures \$11,841.

The receipts of the *Board of Foreign Missions* had been \$58,154. The missions—in India, China, and Japan—comprised 9 stations, 101 out-stations, 16 missionaries, 24 assistant missionaries, 13 native ministers, 39 catechists or preachers, 37 churches with 2,625 communicants, 5 academies, 90 day-schools, with 2,210 scholars, and 14 theological students. The contributions of the native Christians during the year had amounted to \$3,233. The synod decided to ask the churches for \$72,000 for this work during the ensuing year.

The receipts of the *Woman's Board of Foreign Missions* were \$14,662.

The *General Synod* of the Reformed Church in America met in Schenectady, N. Y., June 7th. The Rev. Edward P. Ingersoll, D. D., of Brooklyn, N. Y., was elected president. A resolution was adopted expressing surprise, regret, and solicitude, at the recent legislation of Congress on the subject of immigration from China; and the hope that the Government might be induced soon to reconsider its action, "and to adopt such measures as will be likely to promote good feeling and friendly intercourse between China and our own country, and which will at least not hinder the work of Christian evangelization in that distant

land." In response to a number of memorials on the subject of Masonry, the synod decided to refer all questions in regard to the standing and relations of persons already in communion, and to the acceptance or rejection of applicants for admission, to the several consistories; and further declared that while it felt restrained, by constitutional limitations, from recommending any course that would invade the innocent freedom of speech or of action guaranteed to every church-member by the established law and usage of the Church, it would in the spirit of Christian kindness, while reaffirming previous deliverances on the subject, "advise all the parties concerned to abstain from any associations, and from pursuing any course of conduct, that would furnish a scriptural or reasonable ground of offense to tender consciences, or that would be likely to interfere with the love and confidence that should always be found among the disciples of Christ." A committee of the synod had been engaged in preparing a revision of the translation of the Heidelberg Catechism, with the intention of consulting with a similar committee of the Reformed Church in the United States, for agreement on a common version. The synod directed that the revision be submitted to the theological professors for their approval, and then published in suitable form. In answer to a number of memorials, asking for the substitution of the word "hades" for "hell" in the Apostles' Creed, the synod directed that the word "hades" be placed in a foot-note at the bottom of the page wherever "hell" occurs in the text of the creed. It was determined that the correspondence of the Church with the bodies to which it is accustomed to send fraternal greetings be hereafter conducted by letter, "unless the distance and other circumstances make it entirely convenient for the appointed delegate to represent us in person." Delegates were appointed to convey the greetings of the Church to the Christian Synod of the Reformed Church of the Netherlands, "and the meetings of any other Reformed Churches in Europe which they may visit."

**THE SUBJECT OF THE CREED.**—A memorial from the Classis of Poughkeepsie, asking that the word "saving" be placed before the word "good" in the clause "incapable of doing any good and prone to all evil," of the confession required in the baptismal formula for adults, was vigorously discussed, and was finally referred to a committee of five ministers and two elders, to consider and report upon it at the next meeting of the synod.

**II. REFORMED CHURCH IN THE UNITED STATES.**—This Church, formerly known as the German Reformed Church, is composed of six synods, viz., the Synods of the United States, of Ohio, of the Northwest, of Pittsburg, the Potomac Synod, and the German Synod of the East; with fifty classes, of which the following is a summary of the statistics, as they are given in the "Almanac for the Reformed Church in

the United States" (Philadelphia: Reformed Church Publication Board) for 1883: Number of ministers, 751; of congregations, 1,420; of members, 163,669; of unconfirmed members, 99,732; of persons who communed during the year, 130,542. Number of Sunday-schools, 1,334, with 103,690 scholars; number of students for the ministry, 127; number of baptisms during the year, 12,711 of infants, and 892 of adults. Amount of contributions for benevolent purposes, \$92,936; for congregational purposes, \$666,442.

The Church has fifteen literary and theological institutions, a general board of Foreign Missions, five synodal boards of Home Missions, four synodal boards for Beneficiary Education, a general society for the Relief of Ministers, a mission among the Indians under the direction of the Synod of the Northwest, and fifteen English and six German periodicals.

The receipts for *Foreign Missions* during the year ending July 1, 1882, were \$3,561. The foreign mission is at Tokio, Japan, where one missionary and his wife are employed. The total amount of the contributions of the Church for *Home Missions* during 1882 was \$14,000.

**RHODE ISLAND.** The State officers for the year were as follow: Governor, Alfred H. Littlefield; Lieutenant-Governor, Henry F. Fay; Secretary of State, Joshua Addeman; Attorney-General, Willard Sayles; Treasurer, S. L. Clark.

Among the most noteworthy recommendations made by Governor Littlefield in his second annual message to the Legislature, on January 31, 1882, he urges the necessity of adopting effectual measures to alter the present system of education in the common schools of the State, so "as to fit the present generation of children, and their immediate successors, for the development of the manufacturing and mechanical industries carried on in Rhode Island, as they will furnish the main employment for our people"; adding, "To fit our youth for the greatest success in these pursuits, they should receive a preparation which is now beyond their reach through any of the ordinary channels of education. Not only should good, elementary instruction be provided, but our schools should be put upon the work of cultivating the eye and training the hand. To aid in this work, our children should be taught the elementary principles of physics and mechanics—those powers and factors with which they are to be intimately connected for the greater part of their lives."

As a means of improving the efficiency of the public schools of the State, he recommends "that special care should be taken to secure for them teachers of the requisite ability, training, and culture; the success of public schools in any State mainly depending upon the intelligence, the skill, the enthusiasm, and the moral force of their teachers."

He commends to the serious attention of the General Assembly the propriety of establish-

ing a State Industrial School for the proper care and training of pauper and vagrant children, who, by no fault of their own, are often at tender age cast upon the public for support and education. He testifies that "there is a feeling on the part of many that such children should not be sent to the Reform School or to the Almshouse, but to some school which shall be entirely separate from all pauper or penal influences, and where such children may be trained in such a manner as shall be most likely to save the State from all expense for their support in the future, and from all responsibility for their conduct when they arrive at maturity."

The January session of the Legislature was closed on April 21st. A large number of acts was passed, among which were the following:

"An act for the more effectual prevention of cruelty to children"; "An act in addition to chapter 49 of the Public Statutes 'of the appropriation for public schools'"; "An act making appropriation for the benefit of the Rhode Island School of Design"; "An act providing for the appointment of the Superintendent of Public Schools in the City of Newport"; "An act in amendment of chapter 71 of the Public Statutes 'of the support and discipline of paupers'"; "An act in amendment of chapter 253 of the Public Statutes 'of the State Reform School'"; "An act to establish a State School for the Deaf." It authorizes the State Board of Education to establish a day-school for the gratuitous education of deaf and semi-deaf children, and to pay for the traveling expenses of indigent pupils residing in the State, provided that such expenses do not exceed five hundred dollars a year; and that the annual amount for the support and maintenance of the school does not exceed three thousand dollars. "Two acts in amendment of chapters 7 and 8 of the Public Statutes 'of registering, listing, and returning lists of voters, and of proof of their qualification to vote,' and 'of canvassing the rights and correcting the lists of voters'"; "An act in amendment of chapter 10 of the Public Statutes, section 7 to read, 'The Secretary of State shall provide a sufficient quantity of uniform, self-sealing envelopes, bearing as a device the form of an anchor with the word *Hope* on the outside, for use in the elections of general officers of Representatives in Congress, and of electors of President and Vice-President of the United States.'"

Among the resolutions of a public nature the subjoined were passed: "A resolution for the appointment of a joint select committee to consider matters in relation to changes in the Constitution"; "A resolution instructing the committee on the revision of the Constitution to consider the subject of biennial sessions of the Legislature"; "A resolution to propose an amendment to the State Constitution." After much debate on these matters, the question was finally put to the vote on

March 28th, when all the members of either House, excepting only one Senator and one Representative, adopted the following:

RESOLUTION TO PROPOSE AN AMENDMENT TO THE STATE CONSTITUTION.

*Resolved*, A majority of all the members elected to each House of the General Assembly voting therefor, that the following amendment to the Constitution of the State be proposed to the qualified electors of the State, in accordance with the provisions of Article XIII of the Constitution, for their adoption, to be denominated Article V of Amendments, to wit:

ARTICLE V. The General Assembly may, a majority of all the members elected to each House voting therefor, authorize the qualified electors of the several towns and cities to elect as many delegates to a Constitutional Convention as the said towns and cities are respectively entitled to elect members of both Houses of the General Assembly, and the delegates, when elected, shall assemble in convention at a time and place to be provided by law, and may then revise, alter, or amend the Constitution; but no such revision, alteration, or amendment shall take effect unless, when the same is first submitted to the qualified electors of the State for their adoption in a manner to be provided by law, three fifths of all the said electors voting thereon shall have voted in favor of such revision, alteration, or amendment.

CONVENTIONS.—In preparation for the April election of State officers, the Republicans assembled at Providence on March 16th, and by acclamation renominated all of the incumbents for their respective offices, excepting Willard Sayles, Attorney-General, who declined, on account of his health, to be again a candidate. Samuel R. Colt, of Bristol, was nominated for Attorney-General; Samuel Clark, of Lincoln, was nominated for Treasurer. No platform was adopted by the convention.

The Democratic party of Rhode Island convened at Providence on March 22d, and nominated the following State ticket: Governor, Horace A. Kimball, of Providence; Lieutenant-Governor, J. G. Perry, of South Kingston; Secretary of State, Jonathan M. Wheeler, of Cranston; General Treasurer, George P. Leonard, of Newport; Attorney-General, Amos R. Perry, of Providence.

The following platform was adopted:

It is resolved by the Democrats of Rhode Island in convention:

1. That we are in favor of such a change in the State Constitution as will guarantee equal political rights to all citizens in the United States resident in this Commonwealth, whether of native or foreign birth.

2. We are in favor of reform in civil service.

3. That we are resolutely opposed to any affiliation of the Democratic party with a political faction which has for its cardinal principle repudiation of the public debt, either State or national.

4. That we demand of the national Government the most energetic measures tending to the immediate abolition in Territories of the United States of that relic of barbarism, too long a disgrace to the honor of our country and the civilization of the Christian world—polygamy.

The Greenbackers also held their State Convention at Providence, on March 22d, but no nominations were made.

At the election, in April, the Republican nominees were generally elected. The aggre-

gate number of votes polled for Governor was 15,523, of which Mr. Littlefield received 10,056.

**REORGANIZATION.**—On May 30th the Legislature met again at Newport, "to proceed to the reorganization of the State government for the ensuing year." The Senate was called to order by the Governor, as its usual President, and John B. Sanborn, the last year's presiding officer of the House of Representatives, was re-elected Speaker. A numerous committee, consisting of five members from the county of Providence and three from each of the other counties, together with the Secretary of State and the Clerks of both Houses, was appointed "to count the ballots for Governor and general State officers, and report to grand committee"; which committee, on canvass, made their report to the General Assembly in grand committee on the same day, declaring the officers actually elected, namely: Governor, Alfred H. Littlefield; Lieutenant-Governor, Henry H. Fay; Secretary of State, Joshua M. Addeman; Attorney-General, Samuel B. Colt; General Treasurer, Samuel Clark. All of these officers were legally sworn in immediately afterward.

The following State officers were elected by the General Assembly on May 31st, both Houses having then met again in grand committee for that purpose: State Auditor, Samuel H. Cross; Assistant Attorney-General, Benjamin M. Bosworth, Jr.; State Inspector of Beef and Pork, Henry M. Kimball; State Inspector of Lime, Gilbert E. Whittmore; State Inspector of Scythe-stones, O. E. Chickering; State Inspector of Cables, Joseph P. Morton.

The same grand committee, on May 31st, elected two Associate Justices of the State Supreme Court, Pardon E. Tillinghast and George M. Carpenter. They elected also trial justices, a long list of justices of the peace, sheriffs and clerks of the several counties, members of the State Board of Education to fill vacancies, and notaries public.

The next General Assembly in either House will stand as follows: In the Senate, Republicans 27, Democrats 8; in the House of Representatives, Republicans 68, Democrats 8.

On June 2d the General Assembly adjourned to June 13th, that the legal time prescribed by the statute of Congress for an election of Senator might elapse. Upon their meeting again, on June 13th, Senator Anthony was re-elected for a fifth term.

On the same day both Houses passed "an act to approve, and publish, and submit to the electors a proposition of amendment to the Constitution of this State." The act declared the above-mentioned amendment approved by both Houses; and fixed "the first Tuesday after the first Monday in November, 1882," as the day of election.

Several acts and resolutions of minor importance were passed on June 14th, relating especially to appropriations, and the Newport session was closed on the same day.

**CONGRESSMEN.**—For the November election

in 1882 the Republicans and the Democrats residing within the two congressional districts of Rhode Island severally met in convention at Providence, the former on October 20th, the latter on the 26th, to nominate their respective candidates for Congressmen. All of these four conventions were held, not only in the same city, but also in the same room—the Slade Hall, the convention for the second district having begun its work immediately after the first had adjourned, the delegates to the former waiting for the departure of those of the latter, to occupy the chairs vacated. The Republicans from either district unanimously re-nominated the incumbents, namely, Henry J. Spooner, of Providence, for the First District; and Jonathan Chace, of Lincoln, for the Second District. The Democrats as unanimously nominated Oscar Lapham, of Providence, for the First District; and Jonathan M. Wheeler, of Cranston, for the Second District.

**COLORED VOTERS.**—The colored voters of Rhode Island, who have long complained of the treatment which they have steadily received at the hands of the Republican party in the State—they being unrecognized as citizens, neglected, and totally ignored in regard to their political rights, excepting that of suffrage, which is eagerly sought for—asssembled in convention at Newport on the 18th of October, 1882, to express and make publicly known their sentiments. About fifty delegates from the various parts of the State attended this convention, a large number of other colored men being also present as interested spectators. Several public speakers of high repute among them addressed the convention, set forth in plain language, besides other causes of complaint, that the colored voters were highly insulted by the party in power, as they were considered not worthy being voted for by any of the public offices in the gift of the people; declaring also that henceforward they intended to act independently of the Republican party on all political occasions, but vote for the person, whatever the party to which he might belong, who would recognize them as citizens.

An "address to the people," recounting their grievances, together with a series of resolutions, was unanimously adopted by this convention, the resolutions being as follow:

*Resolved*, That the Republican party of our State has failed to properly recognize the worthiness and faithful devotion of its colored adherents; that it continues to do so in the face of earnest but respectful remonstrances.

*Resolved*, That while we cling to those principles which have made the party acceptable to the people, and would adhere steadfastly to its nominations, we affirm our determination to support that person, let him be allied to whatever party he may be, if he shall convince us that he has the most regard for our rights and feelings as citizens of the State.

*Resolved*, That we demand common respect, and a fair representation in the apportionment of prominent and other offices; not simply because of the money considerations that usually accompany office, but that it may be seen that our class is respected and deferred to as are other citizens.

*Resolved*, That we will hold in contempt, as a traitor to manhood and his race, that man who will permit his vote to be influenced by a tender of money or any other corrupting influence.

The colored people of the State numbered 6,271 in 1875, and 6,592 in 1880.

**ELECTIONS.**—At the election held on the 7th of November, the two Republican nominees were elected members of Congress.

The amendment to the Constitution of the State was rejected. The votes approving the amendment, instead of being three fifths, were much less than one half of the whole number cast upon it throughout the State. In almost every town the nays were more numerous than the yeas, as follows: for the amendment, 4,393, and 5,125 against it.

**FINANCES.**—The State debt on December 31, 1881, amounted to \$2,521,500; at the same date in 1882, it was \$1,606,500, as much as \$952,000, which fell due on the first day of September, having been paid.

The receipts and expenditures during the year 1882 were as follow:

Receipts.....	\$688,419 84
Balance in the Treasury on December 31, 1881..	210,789 90

Total.....	\$1,099,209 24
Expenditures .....	774,289 80

Balance in the Treasury on January 1, 1883. \$324,919 44

The deposits in the savings banks, on the 28th of November, 1882, amounted to \$50,657,-876.80, including \$187,067.49 of surplus profits on hand; which shows in the said deposits an increase of \$1,548,948.37 over those of 1881. The whole number of depositors in November, 1882, was 112,472, showing also an increase of not less than 9,481 over their number in the preceding year.

**EDUCATION.**—The present condition of education in Rhode Island, with regard to the number and kind of her school-houses, the number of children of school age, and their attendance, is quite satisfactory.

**STATE INSTITUTIONS.**—The charitable, reformatory, and penal institutions supported by the State, and now grouped together at Cranston, upon the land known as "the State Farm," are also under excellent management and realize the purposes for which they have been established. The number of these institutions and of their respective inmates, on December 31, 1882, was as follows: "Asylum for the Insane, 305; Workhouse and House of Correction, 252; Almshouse, 221; Sockanosset School for Boys, 138; Oaklawn School for Girls, 24; State-Prison, 94; and Providence County Jail, 129; in all, 1,163. Adding the number of officers with their families, residing at the institutions, the total population is about 1,250."

The Governor states the increase in the number of insane persons at the asylum to have been alarming for these several years, and that in 1882 this increase was two thirds larger than in 1881, the insane patients reported at the close of the said two years having been 303 and 281 respectively.

**RAILWAYS.**—The railway lines have transacted during 1882 a considerably larger amount of business, in both passenger and merchandise transportation, than during the previous year—the total number of passengers in 1882 having increased to 3,822,220, and that of tons of merchandise to 672,391. The general expenses incurred by them, however, the Railroad Commissioner states to have so far increased during the year that in their net earnings there has been a decrease of \$244,869.75.

"Thirty-one accidents have occurred on these railroads during the year 1882, by which fourteen lives were lost, and twenty-two persons were injured."

No additional mileage has been made during this year to the tracks of the railroads in the State.

**RICE PRODUCTION OF THE UNITED STATES IN 1879.** The production of rice, in the several rice-growing States, for the year 1879, and the average yield to the acre, as returned by the census of 1880, were as follow:

STATES.	Acres.	Pounds.	Average yield per acre (pounds).
Alabama.....	1,579	510,889	514
Florida .....	2,551	1,294,677	508
Georgia.....	84,973	25,369,687	725
Louisiana .....	42,000	23,188,311	552
Mississippi.....	8,501	1,718,951	491
North Carolina.....	10,346	5,609,191	517
South Carolina.....	78,888	52,077,515	664
Texas.....	385	62,152	156
Total.....	174,173	110,181,378	632

**RODGERS, JOHN**, Rear-Admiral United States Navy, born in Harford County, Md., August 8, 1812; died in Washington, D. C., May 5, 1882. In his sixteenth year he was appointed midshipman from the District of Columbia, and joined the Mediterranean squadron in the frigate *Constellation*, under the command of his father, Commodore Rodgers. In 1832 he went to the Naval School at Norfolk, Va., and two years later passed his examination and became a passed midshipman. He then spent a year of study in the University of Virginia. From 1836 to 1839 he served on the Brazilian squadron, when he took command of the schooner *Wave* on the Florida coast. He was made lieutenant January 22, 1840, and assigned to the command of the schooner *Jefferson*. He was now occupied in hydrographic work among the Florida Keys, and in conducting hostilities against the Seminole Indians. He joined the Mediterranean squadron again in 1846, and remained there for nearly two years. During the three following years (1849-'52) he was again on duty on the coast of Florida, in fixing the position of shoals, reefs, etc., in ascertaining the direction of currents, and in preparing charts.

In 1852 Lieutenant Rodgers joined the squadron which formed the Northern Pacific

Survey Expedition, under Commander Ringgold, and succeeded to the command when in the China Seas. His surveys of the Ladrone Islands, Loo-Choo, and other islands, added much valuable knowledge and increased the safety of navigation in those seas. In 1855 he sailed from Kamchatka, in the Vincennes, through Behring Strait into the Arctic Ocean, for the purpose of verifying the position of lands plotted by British officers on the Admiralty charts. He then sailed westward in search of the land plotted by Admiral Wrangel, but was turned back by ice-barriers. His return was occupied in marking his zig-zag course by line of soundings on the chart of "Behring Sea and the Arctic Ocean." This chart was published by the Government, and added to Rodgers's well-earned reputation. He reached San Francisco in October, 1855, and was gazetted with his officers by the Navy Department.

On the breaking out of the civil war, Commander Rodgers was sent West to superintend the construction of the Benton class of iron-clads. Desiring more active duty, he was placed in command of an expedition of gunboats, which he led (May 15th) to the famous attack on Fort Darling. His courage and skill were shown on many occasions, on one especially, when, in the monitor Weehawken, he captured, after a very brief engagement, the rebel ironclad Atlanta, in Warsaw Sound, Georgia, a vessel much his superior in tonnage and force. His most famous voyage was in the monitor Monadnock, which, under his command, navigated the Atlantic and Pacific, passing through the Straits of Magellan, and reaching San Francisco in safety.

Commodore Rodgers was particularly serviceable in the harbor of Valparaiso, where he succeeded in preventing a bombardment of the city by the Spanish fleet. His tact, judgment, firmness, good sense, all deserve praise, and received high commendation from the Government. In December, 1866, he was assigned to the command of the Charlestown Navy Yard; he was made rear-admiral December 31, 1869; and early in 1870 took command of the Asiatic fleet. His expedition to Corea and his prompt measures against the treachery of the natives showed those savages very plainly that the United States would never submit to outrage on their part with impunity.

On finishing his Asiatic cruise, Admiral Rodgers was made commandant of Mare Island Navy Yard, California, since which time he has been in charge of the Naval Observatory. Having received the thanks of Congress, his official life was prolonged beyond the prescribed age. He took an active interest in all that related to the service in which the best years of his life had been spent. He became a member of the Light-House Board in May, 1878, and was elected chairman to succeed Professor Henry. He died full of years, and was honored and esteemed by all who came in contact with him,

for his many noble and excellent qualities of both head and heart.

**ROMAN CATHOLIC CHURCH.** The earliest important official acts of Pope Leo XIII in the year 1882 were a series of beatifications, by which the public invocation and the exposition of the pictures of personages whose lives and miraculous powers had been duly investigated, were permitted in certain districts or to certain orders. These were, Blessed Alphonsus de Orosco, Hermit of the Order of St. Augustine, born at Oropesa, Spain, October 15, 1500, preacher to Charles V, and a theologian of high rank, beatified January 15th with solemn ceremonies in the Aula of the Canonization; Blessed Charles da Sezze, a Franciscan lay brother, known in the world as John Charles Marchione, born at Sezze, October 22, 1613, died January 6, 1670, beatified January 22, 1882; and Blessed Humilis da Bisignano, also a Franciscan lay brother, known in the world as Luke Anthony, born at Bisignano, in Calabria, August 25, 1582, died there October 26, 1637, beatified January 29, 1882.

**AN ENCYCLICAL.**—In an encyclical, dated February 15, 1882, and addressed to the archbishops and bishops of Italy, Pope Leo XIII, after reviewing the increasing assaults on religion and the spread of antichristian ideas, urges them to labor to counteract them: "In order to nourish and increase awakened virtue, it is necessary to see and provide that societies may be increased and flourish, in number, co-operation, and good accomplished; that the main object of these societies should be to maintain and arouse faith and other Christian duties. To this class belong associations of youth, of artisans, those intended for assembling Catholics at stated times, societies for the relief of the poor, for the observance of holy days, instruction of the children of the poor, and the like. And as it imports in the highest degree for the Catholic weal that the Roman Pontiff should be, and be known to be, free from all peril, annoyance, and difficulty, let these associations strive, by remonstrances, and by every form of action within the law, for the cause of the Pope. Let them endeavor and do, nor take rest till there is restored to us that liberty in fact, and not in figure, with which, as in a compulsory bond, is joined not only the Church's good, but a favorable course of Italian government and the tranquillity of Christian nations." He urged the daily or most frequent dissemination of sound principles and doctrines to oppose the flood of irreligious and communistic theories constantly offered to the unwary. Cardinal rules are given for writers. The bishops are urged also to renewed care in the due training of candidates for the priesthood in properly organized seminaries.

A form long in use, by which certain ancient sees in lands overrun by the Mohammedans were designated as *in partibus infidelium*, was suppressed by the Congregation "de Propaganda Fide," and approved by Pope Leo XIII,

February 28th. Where bishops are appointed as coadjutors or auxiliaries, they are made bishops of some one of these ancient sees; and, where necessary to distinguish the fact of non-residence, the formula *titular* bishop is to be used.

**CARDINALS.**—On the 29th of March the Pope pronounced two cardinals reserved *in petto* December 13, 1880, Francis Ricci Paracciani, Majordomo, and Peter Lasagni, Secretary of the Sacred College, both of the order of Cardinal Deacons; and also created cardinals, Dominic Agostini, Patriarch of Venice; Charles M. A. Lavigerie, Archbishop of Algiers; Mgr. Lluch y Garriga, Archbishop of Seville, who died before the close of the year, and Edward McCabe, Archbishop of Dublin. At a second creation, September 26th, Wladimir Czacki and A. Bianchi were also made cardinals; but during the year Cardinals Donnet, Lluch y Garriga, and Sanguigni died.

**DIPLOMATIC RELATIONS.**—Events were now beginning to show that many of the great powers felt that harmonious relations with the Sovereign Pontiff, the spiritual head acknowledged by a large part of their subjects, tended to render them more hearty in their support of the civil institutions under which they lived, and, in times when most radical and disorganizing theories were spreading, the influence of a Church essentially conservative was an element of strength, began to renew their intercourse with the Holy See by regular diplomatic representatives. Baron Von Schlöser, ambassador from Prussia, arrived in February. Russia, France, Brazil, with other American States, followed, and even England prepared at last to enter into diplomatic relations with the Holy See, which legislative enactments no longer forbade. This recognition that the papal sovereignty was diminished only, not destroyed, by the capture of Rome in 1870, only served to bring his anomalous position into a more striking light. A trivial incident brought from Italy a direct denial of the very sovereignty recognized by Catholic, Protestant, and Greek states.

**CASE OF MARTINUCCI.**—Martinucci, an architect employed in the works in the Vatican, dismissed for misconduct in 1879, considering himself aggrieved, brought suit in one of the Italian courts against the Cardinal Secretary of State and the Majordomo. As a claim on the pontifical treasury, it was virtually, though not in form, a suit against the Pope himself, and avowedly for matters arising within the precinct where he was, by the recognition of all, sovereign. To obviate a recurrence of such cases, Leo XIII, on the 25th of May, by a *motu proprio*, declared that "we can not in such questions of internal order permit the intervention of foreign authority," and he established two commissions, each composed of three prelates, to be appointed by him, for the adjudication in the first instance, and on appeal, of all complaints against any administration of the palace

arising on contract or quasi contract. The Italian court, though the question of jurisdiction was at once raised by the advocate Corazzini in the name of the Vatican, overruled it, declaring the Vatican to be within the jurisdiction of the courts established by the Italian Government. It dismissed the case (August 16th) on the merits; but it was carried to a Court of Appeals, which (November 13) affirmed the decision of the lower court, both as to jurisdiction and as to the merits of the case.

The whole question was discussed, and Menchetti, in his "*Stato Chiesa*," avowed that the law of guarantees was "only a temporary affair, intended to quiet Catholic powers and populations, the real object being to put an end in time to the exceptional and privileged situation it created for the papacy, and to make the Sovereign Pontiff return to the common law." Other leaders held the same views, Borighi, in the "*Nuova Antologia*," saying distinctly: "The rights of the Pope are inviolable only because the Italian law makes them so." The Cardinal Secretary of State addressed a note to the nuncios at the European courts, and the position of the Pope was brought up directly for diplomatic action. In the excitement against Austria, arising out of the Overdank affair, an attack was made, on December 29th, in the Piazza Sciarra, at Rome, on the carriage of Count Paar, the Austrian ambassador to the Pope. The Italian court before which the offender was brought ignored the diplomatic character of Count Paar, and held the offender "for an offense against an office of the administrative order."

In his allocution of December 24th the Pope said: "This year the work of persecution has not stopped. We will not speak of the increasing audacity of a shameless press, nor of the unworthy insults it launches with impunity for this end against all that is respected and sacred. We form no new complaints on the many Italian dioceses long left without pastors, although seasonably provided by us, nor on the spiritual loss which the faithful population receive. But we must mention a new attempt made on our inviolable rights. They have pretended to maintain that the very site of our abode is no longer to be respected or inviolable; whence it results that in the very precincts of our apostolic palace we are no longer free to exercise our sovereign rights."

In fact, the Italian law did not recognize in the Pope the immunity which the Pope's nuncio enjoyed at every European capital.

**GERMANY AND THE POPE.**—The state of the Catholic Church in Prussia and the German Empire was not improved in 1882, although the Government allowed some vacant sees to be filled. Several dioceses were still without bishops, and hundreds of parishes without priests. The Government had made some effort to obtain of the Pope a surrender of rights without repealing the May laws. In 1878, during the illness of the Emperor, the

Imperial Prince addressed Pope Leo XIII. The same year Prince Bismarck met at Kissingen Mgr. Masella, nuncio at Munich, but would not consent to a revision of the May laws. The next year he had interviews with Cardinal Jacobini at Vienna and Gastein, and Mr. Huebler was sent to Vienna to prepare for negotiations. Early in 1880 the Pope, in a letter to the Archbishop of Cologne, showed a willingness, for the sake of delivering the Catholics from their spiritual destitution, to do anything not absolutely incompatible with the discipline of the Church. Finally, in 1882, Mr. Schlözer was sent to Rome as Prussian ambassador, and negotiations were begun, but little progress was made. Leo XIII at last, in order, if possible, to bring the matter to a definite settlement, addressed the Emperor in person:

I.

YOUR MAJESTY: At the last opening of the Prussian Landtag your Imperial and Royal Majesty expressed to your people your heartfelt joy at the re-establishment of friendly relations with the head of the Catholic Church. Your utterances were so kind toward us that they were exceedingly agreeable, and we are forced to tender your Majesty our especial thanks. We do so with heartfelt satisfaction.

Since the beginning of our pontificate our confidence in the noble and generous nature of your Majesty has been so great, that we felt sure of the return of religious peace and tranquillity of conscience to the people under your powerful scepter; and now the re-establishment of diplomatic relations, and the interest which your Majesty evinces, strengthen our hopes.

Your Majesty's long experience and high good sense teach you the necessity of the observance of religious duties by the people for the fulfillment of those which fall on them as citizens and subjects. This is especially the case at present, when society is shaken to its very basis. We can assure your Majesty that the Catholic Church is animated by a similar spirit, and, unless obstructed, she has the will and the power to extend it everywhere. It is our earnest desire to have the holy influence of the Church used for the advantage of both the people and the Government, and for such a purpose to seal relations of friendship and peace.

If the imperious duties of the apostolic ministry, filled with responsibility to both God and man, force us to ask that the new ecclesiastical legislation of Prussia—at least in the points essential for the existence and life of the Catholic religion—may be definitively softened and improved, your Majesty, far from ascribing it to a lack of conciliatory disposition, will please acknowledge that we ask it in the interest of peace, which could not be true and lasting were it not established on a solid foundation. This pacification, while it will satisfy one of the most ardent desires of our heart, and bind with stronger ties to the throne of your Majesty the souls of all your Catholic subjects, will no doubt form the most beautiful and precious crown of your long and glorious domination.

With this hope we raise to Heaven the most fervid supplications for the prosperity of your Majesty, and of your imperial and royal family.

LEO, P. P. XIII.

From the Vatican, December 8, 1882.

To the Imperial and Royal Majesty of William I, Emperor of Germany and King of Prussia.

This elicited the following reply:

BERLIN, December 22, 1882.

I thank your Holiness for the letter which you addressed me on the 8d of this month, and I reciprocate with all my heart the kindly feelings it manifests. This letter confirms me in the hope that your Holiness

will derive, from the satisfaction you share with me at the restoration and activity of my legation, a new motive for replying, by an equal advance, that of my Government, which has rendered the occupation of most of the episcopal sees possible.

I am of opinion that such an advance, if made in the matter of the designation of ecclesiastical nominations, would be more advantageous to the Church than to the State, because it would open the possibility of filling the ecclesiastical posts which have become vacant. If, in consequence of an advance of the clergy in this matter, I could feel assured that the desire for an understanding is reciprocal, I might lend my hand to the submission for a fresh examination by the Landtag of my monarchy of those laws which were useful in the period of the struggle for the defense of the contested rights of the State, without their being necessary in a permanent manner for pacific relations.

It is with satisfaction that I avail myself of this occasion to assure your Holiness once more of my devotedness and personal veneration.

(Signed)

WILLIAM.

Countersigned BISMARCK.

II

YOUR MAJESTY. The letter which your Imperial and Royal Majesty sent us last December by the hands of Signor Schlözer, Envoy Extraordinary and Minister Plenipotentiary from Prussia to the Holy See, has confirmed in us the hope, long time entertained, of a complete settlement of the religious controversies in the kingdom of Prussia. The readiness of your Majesty to co-operate in a revision of ecclesiastical legislation, indicates the conclusion of a complete agreement at no distant date. For this favorable disposition of your Majesty we express our thanks and satisfaction.

We have directed our Cardinal Secretary of State to write a note to Signor Schlözer, which note we believe has already been brought to the knowledge of your Majesty's Government. In that note we desired that the royal Government should be assured of our will, manifested on many other occasions, to permit the bishops to notify the Government of the candidates selected for the pastoral benefices. And, in order to get nearer to the views and wishes of your Majesty, we have also made known our disposition, after the requisite notification, to fill up the parishes actually vacant, without awaiting the complete revision of the existing laws.

We have, however, asked meantime that the measures now binding the exercise of the ecclesiastical power and ministry in the instruction and education of the clergy be modified, because a modification, we believe, is indispensable to the very life of the Catholic Church.

She desires that her bishops shall have the power to train and instruct her sacred ministers vigilantly, and according to the spirit of the Church. The State could not exact less than this for its own functionalities. A reasonable freedom in the exercise of ecclesiastical power, and in the ministry, for the welfare of souls, is also an essential element of life in the Church. It would be useless to nominate to parishes new candidates, if they were forbidden to act in conformity with the duties imposed upon them by the pastoral office.

Once in accord on these points, it will be easy, with a reciprocal good will, to come to an understanding on other conditions necessary to insure a true and lasting peace, the final aim of mutual wishes.

Meantime we pray your Majesty to accept the repeated expression of the fervent supplications that we do not cease to raise for the full prosperity of your Majesty, and of the imperial and royal family.

LEO, P. P. XIII.

From the Vatican, January 30, 1883.

To his Majesty Imperial and Royal William I, Emperor of Germany and King of Prussia.

**RUSSIA AND THE CHURCH.**—While the negotiations between Prussia and the Holy See were thus protracted, from the unwillingness of Prussia to recede from the extremely harsh legislation adopted against the Catholic Church, the relations between Russia and the Pope had been speedily adjusted. The persecution of Catholics in Russia had lasted for twenty years; hundreds of bishops and priests had been exiled to Siberia or other districts; men had been forced into their places who went over speedily to the State Church; whole districts were compelled to accept that Church and its ministry. The Russian Government, relaxing its severity, set at liberty Bishop Borowsky, who had been for twelve years interned at Perm, and released others soon after. The Russian ambassador, M. de Bouteniew, on December 24th, signed a convention with the Cardinal Secretary of State by which the Latin Catholics, and especially the United Greeks—that is, Catholics following the Greek rite, but united to the Holy See—secured a degree of liberty and peace that they had not enjoyed for years.

**FRANCE AND THE CHURCH.**—In France the Government continued its system of hostility. By a law of March 18th, a set of books on civic morality, compiled by Paul Bert and other writers in a spirit hostile to Christianity, were introduced into schools. The books were condemned at Rome, and several bishops, in pastoral letters, announced to parents that they could not conscientiously permit their children to learn them. For this the bishops were cited before the courts. Steps were then taken to suppress all religious instruction in schools, and all Christian emblems were removed. Abbot Couturier and his Benedictine monks were forcibly evicted from their monastery at Solesmes by a force of soldiers and *gens d'armes*. As a compensation for the church property seized by the Government, it had been established that a yearly stipend was to be paid to each priest doing parochial duty, and that, in each commune where the collections did not meet the expenses of maintaining the Church, the deficiency was paid by the commune. In 1882 a law exempted the commune from this obligation.

**PORTUGAL, ETC.**—Portugal and Belgium were in a somewhat similar position with regard to the Pope, and, at a later period, Chili also. The nomination to the bishoprics is in these countries claimed by the State, and in each of them nominations were made which at Rome were not deemed such as could in conscience be approved by the Pope. Threats were made of suppressing episcopal sees in Belgium and Portugal.

**UNITED STATES.**—In the United States provincial councils were held at Cincinnati (March 4th) and San Francisco (April 29th), and a synod at New York (November 8th). A new see was erected at Grand Rapids, Mich. Bishop Lynch, of Charleston, one of the most learned and able members of the hierarchy, died February

26th. Several cases affecting the discipline or property of the Catholic Church were before the courts. In *Sheehan vs. Twigg*, the Supreme Court of Pennsylvania, following decisions in Michigan and elsewhere, held a bishop not personally liable to a priest for his salary. In Ohio, a case against Archbishop Purcell was tried early in the year, but no decision was rendered in 1882. The Vicar-General of the diocese, Very Rev. E. Purcell, had for years received deposits of money, which he invested or loaned so injudiciously that he failed, owing some millions, and had no books to show how the money had been employed. The Most Rev. John B. Purcell, as Archbishop, assumed the responsibility of his brother's acts, and on this the creditors claimed all ecclesiastical property held in the Archbishop's name. The main questions at issue were, whether a trustee can, by assuming the acts of another, deprive his *cestui que trust* of their property which he holds merely as trustee; and, further, whether any particular church was liable to the creditors beyond the amount it may have received as a loan or grant from the insolvent. Actual count showed two fifths of the church-goers in Boston and seventeen twenty-fourths of those in St. Louis to be Catholics.

The foreign missions showed exertion, peril, and death. In China, the missionaries in northern Honan were often in danger of death, and were compelled to fly from one place to another to escape the mandarins. A missionary was killed at Peishun, but in southern Honan and in Tchely the missionary reported more than sixteen hundred adult converts. Progress was also made in Tonquin. In Zanzibar the Sultan showed such favor to the missionaries that the Pope sent him an elegant mosaic work.

The general life of the Church was shown in pilgrimages to Rome, and in the centenaries of St. Francis of Assisium and St. Teresa. Among the pilgrimages, one from Spain began to assume a political aspect, but the Pope, declining to receive one except as organized by the bishops severally, prevented any political demonstration. An encyclical letter, addressed to the archbishops, bishops, and other ordinaries of Spain (December 8th), sought to restore harmony. The centenaries of St. Francis (September 8th) and St. Teresa (October 15th) were especially encouraged by the Pope, who, in a brief, warmly commended the extension of the Third Order of St. Francis as a remedy for our times. Both celebrations were made a means of reviving piety.

The Propaganda, by a circular of October 20th, invited Catholic missionaries in all parts of the world to send contributions to the great ethnological collection, the Borgia Museum, in the Vatican.

**ROUMANIA**, a kingdom of Eastern Europe, formerly a province of Turkey. Absolute independence was proclaimed May 22, 1877, and was recognized by the powers at the Congress of Berlin, June 13, 1878. The Principality of

Roumania was erected into a kingdom March 26, 1881. The Constitution was elaborated by a Constituent Assembly in 1866. It delegates the legislative power to the Senate, of seventy members, and the Chamber of Deputies, of one hundred and forty-five members. The members of both Houses are chosen by electoral colleges for each district. Every citizen able to read and write is a voter. The King has a suspensive veto on legislation.

The King, Carol I, is the son of Prince Hohenzollern-Sigmaringen, born April 20, 1839. He was elected Prince of Roumania in 1866, after the abdication of Alexander John, who was elected Hospodar upon the union of Moldavia and Wallachia into the Principality of Roumania in 1861.

The executive authority is exercised by a council of seven ministers. The Cabinet, as reconstructed in August, 1882, is composed of the following members: President of the Council and Minister of War, Ivan Bratiano; Minister of Foreign Affairs, Demetrius Sturdza; Minister of the Interior, G. Chitzu; Minister of Finance, G. Lecca; Minister of Agriculture, Commerce, and Public Works, Colonel N. Dabija; Minister of Public Instruction and Religion, Aurelian.

**AREA AND POPULATION.**—The area of Roumania, as fixed by the Treaty of Berlin, is about 49,979 square miles. By that treaty the Bessarabian provinces annexed by the Treaty of Paris to Roumania, embracing 3,270 square miles, and containing about 140,000 inhabitants, were restored to Russia; and a territory including the islands of the delta of the Danube, the Sandjak of Tulteha, and a strip south of the Dobrudja, 5,935 square miles in total extent, and containing about 357,000 inhabitants, were annexed to Roumania. The population of the kingdom is known only by estimates. The official estimate of the total population in 1882 was 5,376,000. In Roumania, as it was before the Treaty of Berlin, the estimated population of 5,073,000 souls included 772,700 strangers, to wit: 400,000 Israelites, 200,000 Bohemians, 85,000 Slavs, 39,000 Germans, 29,500 Hungarians, 8,000 Armenians, 5,000 Greeks,

2,000 French, 1,000 English, 500 Italians, and 2,700 Turks, Poles, Tartars, and others. The 106,943 inhabitants of the Dobrudja comprise 31,177 Roumanians, 16,493 Turks, 28,715 Bulgarians, and 30,558 of other nationalities.

The Greek Orthodox is the state religion. The numbers of adherents to this faith are estimated at 4,529,000; of Roman Catholics, 114,200; of Protestants, 13,800; of Armenians, 8,000; of Lipovans, 6,000; of Israelites, 400,000; of Mohammedans, 2,000. This estimate does not include the population of the annexed sandjaks, which increased considerably the numbers of Mussulmans and Lipovans.

The principal cities are Bucharest, the capital, containing, in 1879, 221,000 inhabitants; Jassy, containing 90,000; Galatz, 80,000; Botochani, 89,941; Ploesti, 33,000; Braila, 28,272; Berlad, 26,568; Craiova, 22,764; Giurgevo, 20,866; Focsani, 20,866; and Piatra, 20,000.

**FINANCES.**—The revenues of Roumania are derived principally from a poll-tax of nine lei and other direct taxes, from the tobacco monopoly, and from the profits on the state property. Following is a summary of the budget for the year ending March 31, 1883, in lei (the lei is equivalent to a franc, the French system of money, weights, and measures having been established in 1876):

RECEIPTS.		Lei.
Direct taxes .....	25,190,000	
Indirect taxes .....	51,886,000	
Public property .....	18,481,600	
Of the ministries .....	17,282,522	
Various receipts .....	7,817,922	
Tithe for collection of direct taxes .....	2,519,000	
<b>Total .....</b>	<b>122,627,044</b>	
EXPENDITURES.		Lei.
Public debt .....	45,458,481	
Council of Ministers .....	63,560	
Ministry of Finance .....	18,755,997	
“ Foreign Affairs .....	1,550,001	
“ Justice .....	4,276,496	
“ Education and Worship .....	11,881,890	
“ War .....	26,404,838	
“ Public Works .....	8,705,212	
“ the Interior .....	9,705,959	
Contingent fund .....	1,874,660	
<b>Total .....</b>	<b>122,627,044</b>	

The public debt stood on April 1, 1882, as follows, the amounts in lei or francs:

LOANS.	Original issue.	Outstanding.	Year of extinction.
Stern Brothers, 1864, 7 per cent. ....	22,889,437	8,767,500	1888
Oppenheim, 1866, 8 per cent. ....	31,610,500	17,515,500	1889
Rentes, 1875, 5 per cent. ....	44,600,000	40,869,500	....
Converted local, 1880, 6 per cent. ....	31,600,000	31,865,200	1924
Funded, 1881, 5 per cent. ....	148,200,000	147,750,000	1931
<b>Total, general. ....</b>	<b>278,899,937</b>	<b>245,767,200</b>	<b>....</b>
Suceava-Roman Railroad, 1868, 7½ per cent. ....	51,535,640	51,442,159	1968
Fund of deposits, 8½ per cent. ....	9,985,320	9,744,962	....
Jassy-Unglien Railway, 1872, 8 per cent. ....	8,770,215	1,683,635	1886
Roman-Verciorova Railroad, 1880, 6 per cent Treasury bonds .....	237,500,000	236,605,000	1923
Treasury bonds, 1881, 5 per cent. ....	47,948,000	47,948,000	1899
<b>Total, special .....</b>	<b>350,739,175</b>	<b>347,423,806</b>	<b>....</b>
<b>Total debt .....</b>	<b>629,639,112</b>	<b>593,191,006</b>	<b>....</b>

**ARMY.**—The military law of June 11, 1868, was modified in 1872, 1874, and 1880, and

again by the law of June 8, 1882. The military forces are divided into (1) the active army,

composed of the regular army and its reserve, and the territorial army with its reserve; (2) the militia; and (3) the civic guard in the towns and the *gloate* or levy in mass in the rural districts. Every able-bodied Roumanian must be enrolled in the regular army—three years in the active army and five in the reserve, or in the territorial army, in which the term is likewise eight years; five in the infantry, and four in the cavalry, active. Lots are drawn to determine to which army a young man is to belong. Those legally exempt and those who have served their time are enrolled in the militia up to their thirty-seventh, and in the third class up to their forty-seventh year. The peace effective of the regular army is 1,200 officers, 18,532 men, 2,945 horses, and 180 guns; the strength of the territorial army is about 100,000 men and 90 guns. Roumania has a naval force of 4 steamers and 14 small gunboats.

There were 780 miles of state railroads in operation on July 1, 1882, and one belonging to a company, 140 miles in length. The total cost of construction was 376,450,000 francs; the gross receipts in 1881, 22,800,745 francs; the running expenses, 16,854,441 francs. There were 420 miles of new lines in construction.

The postal traffic in 1881 embraced 6,873,317 private letters and a total of 12,504,199 letters, circulars, etc., besides 415,469 packages and 881,110 postal orders.

The length of the state telegraph lines in 1881 was 3,320 miles; length of wires, 5,420 miles. The number of private domestic dispatches was 648,234; of private foreign dispatches, 292,797; total number of dispatches, 1,150,188. The total receipts were 4,028,727 francs.

COMMERCE.—The imports of Roumania increased from 82,927,228 lei in 1871, to 274,757,458 in 1881; the exports from 177,682,783 to 206,518,317 lei. The exports consist entirely of cereals and other agricultural products. The values exported of the chief classes of articles in 1881 were as follow, in round numbers: Cereals, 157,200,000 lei; animals, 16,600,000; textile materials, 7,100,000; wood, 5,200,000. The following were the chief classes of imports: Textiles, 98,400,000 lei; metals and metal manufactures, 48,600,000; leather, 36,500,000; wood and its manufactures, 13,900,000. Of the total imports 135,000,000 lei came from Austria-Hungary, 50,500,000 from Great Britain, 31,800,000 from Germany, 22,700,000 from France, and 16,400,000 from Turkey and Bulgaria; of the exports, 82,200,000 lei went to Great Britain, 72,100,000 to Austria-Hungary, 19,300,000 to France, 11,400,000 to Turkey and Bulgaria, and 1,600,000 to Germany.

DANUBIAN COMMISSION.—The European Commission of the Danube was created by the Treaty of Paris in 1856, and continued and endowed with larger powers by the Treaty of Berlin in 1878. It has its seat at Galatz, and has delegated to it, as the representative of the

seven contracting powers and of Roumania, certain sovereign rights over the Danube below Galatz, viz., to exercise police jurisdiction, to frame and promulgate regulations which have the force of law, to levy imposts, raise loans, and apply the proceeds to works of public utility. According to the convention signed at London, March 31, 1871, the existing commission continues its functions twelve years from that date. The works finished and to be finished by the commission were declared perpetually neutral.

The accounts of the commission for 1881 show 3,448,190 francs of receipts, of which, 1,985,052 came from fees and tolls, and 1,463,138 from other sources. The expenses were 2,606,095 francs, of which 1,111,685 were for the service of the debt; 289,458, administrative expenses; 711,098, technical service; and 493,854, various charges. The debts of the commission consisted on January 1st of the unpaid portion of an advance made by the Sublime Porte, and transferred to Erlanger & Co., amounting to 2,469,371 francs, to be repaid by 1883, and of a loan contracted in 1868, amounting to 312,540 francs, due in 1882. The commission possessed as assets a reserve fund of 1,000,000 francs, and the year's surplus of 842,095 francs, besides a pension fund of 264,856, and a pilotage fund of 46,564 francs.

The commerce of the Danube is almost exclusively in grain. Most of the vessels arrive in ballast. The participation of the different nations in the navigation of the river is shown in the following table, giving the number and tonnage of vessels cleared in 1881:

FLAG.	Steamers.		Sailing-vessels.		Total.	
	No.	Tons.	No.	Tons.	No.	Tons.
English .....	516	496,666	7	2,328	523	498,994
Greek .....	50	44,173	487	84,518	537	128,691
Austrian .....	83	42,699	18	4,806	101	47,005

Total .....	770	653,016	941	140,438	1,711	793,454

The number of vessels which sailed from Danubian ports in 1880 was 1,813, of 658,063 tons aggregate burden, embracing 583 steamers, of 467,189 tons, and 1,230 sailing-vessels, of 190,874 tons. The exportation of grain from the ports of the lower Danube was 5,403,421 quarters in 1881, against 4,251,331 quarters in 1880, and 5,394,729 in 1879.

FOREIGN RELATIONS.—The Danubian question engrossed the attention of the Roumanian people more than the important subjects of internal reform which were broached in 1882. The Government in apologizing upon the demand of Austria, and under the pressure of Germany and Russia, for the bold declaration in the royal address of 1881 (see "Annual Cyclopædia" for 1881), did not abandon the

principle therein asserted. The French member of the Danube Commission, Barrère, offered a substitute for the Austrian proposal for a commission to regulate the navigation of the Danube between the Iron Gates and Galatz, under the presidency of Austria. Barrère's project was, that instead of Austria retaining the presidency and casting vote in the new commission, the delegates of each of the powers participating in the Danubian Commission should exercise them in turn, alternating annually in alphabetical order, according to the French nomenclature. This proposition was opposed by Roumania, for the same reason that the original *avant projet* was opposed, since for the first two years Germany and Austria would have the presidency of the new commission. A counter-project was proposed by Roumania, according to which a supervising commission should be created, to be composed of two delegates appointed by the Danubian Commission, and one each from the riparian states, Bulgaria, Roumania, and Servia; the delegates of the Danube Commission to be changed half-yearly, and to be taken from the states-participating in the commission in alphabetical order.

Another Danubian question arose in the latter part of the year, in which the Roumanian Government had to defend itself against the pretensions of Russia, as it had against those of Austria-Hungary, in the question of a mixed commission, to control the navigation between the Iron Gate and Galatz. When the Danubian Commission were preparing to have soundings made in the Kilia outlet, the Russian Government proposed to send engineers to participate in the surveys, on the ground that, as a riparian power, Russia was interested in plans for rendering navigable the Kilia branch. This branch of the Danube is the boundary between the Bessarabian provinces, ceded back to Russia by the Berlin Treaty, and the territory acquired by Roumania from Turkey. The Russian authorities ordered soundings to be taken independently of the operations of the commission, but the season was too far advanced for anything to be done before spring. The Roumanian Government protested at once against having the Kilia branch placed in an exceptional position, basing its protest upon the existing treaties which give the Danubian Commission jurisdiction over all three mouths of the river. The matter at issue is of technical as well as of political importance. The Kilia branch is as large as the Sulina branch, both being smaller than St. George's Channel. Operations which would make the Kilia branch navigable might interfere with the navigation of the Sulina branch, which was chosen as the international route of communication by the commission, and upon which they have expended their funds.

Both the Kilia question and the difficulty with Austria were postponed till the meeting of plenipotentiaries at London, in 1883, at

which the question of renewing the powers of the Danubian Commission was to be decided, and all matters relating to the Danube reviewed and resettled.

**POLITICS AND LEGISLATION.**—In the beginning of the year the Bratiano-Rosetti Cabinet was broken up. The opposition of the landlords, who form the majority of the Senate, to Rosetti's projects of agrarian reform, led to the dissolution of the Liberal combination, as much as the external cause of the recantation of the brave words in the royal address respecting the sovereignty of Roumania over the Danube within her borders. The Minister-President succeeded Rosetti in the Interior Department, being relieved of the portfolio of Military Affairs, of which he had charge *ad interim*, by General Angheliesco, while G. Lecca took charge of the Department of Finance. Chitzu became Minister of Justice, the other ministers remaining in their places.

Rosetti's reform was intended to place the peasantry on a similar footing with the laborers of other countries in regard to their labor-contracts with the land-owners. When serfage was abolished in 1864, the lands apportioned to the emancipated serfs formed only a small portion of the tillable soil, and were far from sufficient to support them. The peasantry were not particularly well disposed to their former lords. Measures were adopted for the purpose of compelling them to work on the land, which gave the landlords almost the same powers over laborers who entered into contracts with them as those which they had exercised over these laborers as serfs. Rosetti resigned his seat in the Cabinet, in order to press his agrarian reform more effectively. The measure passed the Chamber of Deputies in the form in which it was brought in by the Government. In the Senate it was considerably altered by amendments, which secured it the support of the land-owners belonging to the Government party, and which were accepted by the Chamber.

According to the old law, the contracts, into which the peasants were obliged by their necessities to enter, could extend over several years, and could be enforced by stripes as well as by fines. The new law abolishes whipping and money-fines, and reduces the number of days which the peasant can be compelled to labor. It also limits the duration of such labor-contracts to two years.

Rosetti introduced a supplementary bill, which also became law, by which the state assumed the debts of the peasants which they had engaged to discharge by future labor, and is to be repaid by the peasants in annual payments extending over a series of years.

The Jewish question in Roumania was a sore one before it became acute in other parts of Eastern Europe. The heedlessness of the landed gentry in money matters, and their repugnance to affairs, made them peculiarly dependent upon the Jews, who monopolized the mercantile

and financial business of the country. The right of citizenship and of owning real estate was denied them. Without these mediæval restrictions the land-owners could not have preserved their estates. In the recent advances of Roumania toward equal rights and constitutional liberty the civil disabilities of the Jews have been removed, but only in form. In the revision of the Constitution in 1879 all confessions were placed on an equal legal footing. Every application for naturalization must be passed upon by the Legislature. No Hebrew has any prospect of receiving the rights of citizenship, however long his family may have been settled in Roumania. Not only have the old restrictions been thus retained, but attempts are made, since the participation of Roumanians in mercantile and other middle-class occupations, to exclude the Jews from the callings which have hitherto been followed by them exclusively. Legislation for this purpose is directed ostensibly against all foreigners, in order to satisfy the provisions of the Constitution. In the last two years, by a series of laws and Cabinet orders, foreigners have been shut out from all licensed and semi-official occupations. According to the license law of 1874 foreigners were denied the privilege of keeping public-houses in the villages. A ministerial order recently extended this regulation to the smaller towns. In like manner foreigners have been excluded from the tobacco-traffic. The professions of the law and teaching have been also closed to them. More recently a law was enacted, according to which no foreigner can be licensed as a broker on the bourse. In the custom-house regulations, voted by the Legislature in the session of 1882, the right of official intercourse with the custom-house was restricted to Roumanian citizens. This rule affected not only the Jewish custom-house brokers, but all importers, actual foreigners as well as Jewish merchants. The Austrian Government protested against it, as contrary to treaties. It was not enforced by the Roumanian authorities on this account. The new restrictions against the Jews, which threatened to deprive many of them of their livelihood, caused the Jewish community to think of emigrating from this inhospitable country. A large number of Roumanian Israelites embraced Oliphant's scheme of recolonizing Palestine, until the emigration to the cradle of the race was stopped by the action of the Turkish Government.

The Chambers passed a measure providing for the definitive acquisition of the entire railroad network by repaying and dissolving the Roumanian Railroad Company. They also voted for building several new railroads and laying out others.

A new military law was enacted, by which the effective strength of the army was increased.

In August occurred another ministerial crisis and a reconstruction of the Cabinet, again in a

conservative direction. Demeter Sturdza entered the Cabinet as Minister for Foreign Affairs, Bratiano taking the portfolio of Military Affairs, and Chitzu that of the Interior, while Angheliesco and Urechia, the Minister of Education, retired, the latter giving up his place to Aurelian, who, like Sturdza, belongs to the moderate wing of the National-Liberal party. Statesco took the portfolio of Justice.

C. A. Rosetti, the intellectual leader of the National Liberals, after retiring from the ministry and carrying his agrarian reform bill as an independent member, took up the question of electoral reform, which he pressed vigorously in his organ, the "Romanul." Before the close of the spring session he resigned his seat in the Chamber, as a protest against the opposition which his reforms met, not only from the Conservatives, but from the aristocratic element in the National-Liberal party. This party, recently so preponderant, showed signs of disruption. Its weakness is not due merely to the divergence of opinion on the reforms advocated by Rosetti, in which social questions the politically strong aristocratic element are inclined to stand by their order, but also to the repugnance of this same element to the class of professional politicians which has sprung up in the party, and the corruption, more or less shielded and glozed over by the leaders.

RUSSIA, an empire in Eastern Europe. The law-making, executive, and judicial authority is concentrated in the person of the Czar, who is also the spiritual head of the Church. His absolute will is unlimited, except by the law of succession, embodied in a decree of Peter I, requiring the Emperor and his family to be members of the Greek Orthodox Church, and one of Paul, issued in 1797, introducing hereditary descent in the order of primogeniture, with female succession only in default of male heirs. The latter rule annulled the decree of Peter I, issued in 1722, ordaining that the Czar should select his successor from among the royal family.

The government of the country is under the supreme direction of the Emperor's private Cabinet. Subordinated to the Imperial Cabinet is the Council of the Emperor, divided into a legislative, an administrative, and a financial department, the functions of which are to superintend the administration of the laws, and to suggest alterations and amendments. A second great council is the directing Senate, which is the highest court of judicature, besides exercising a control over the other tribunals of the empire. It is divided into eight sections, each of which acts as the court of final resort in a particular branch of the law. A third great governing body is the Holy Synod, which has the direction of ecclesiastical affairs. All its decisions must be ratified by the Czar.

The Imperial Cabinet is divided into eleven departments. The Minister of the Imperial Household is General Count Worontzov Dash-

kov, who succeeded Count Alexander Adlerberg in 1871. At the beginning of 1882, Prince Alexander Michael Gortchakoff was still Minister of Foreign Affairs, over which department he had presided since 1856, though N. De Giers has had the practical management for some years. When the long-deferred retirement of Prince Gortchakoff took place in March, he was succeeded by De Giers. The Minister of War is General Count Vannoski, who was appointed March 29, 1881. General Count Ignatieff, who was appointed Minister of the Interior, March 29, 1881, was succeeded by Count Tolstoy in June.

The post of Minister of Public Instruction vacated by the latter was filled by Baron Nicolai. The Minister of Finance, Bunge, took the place of Count Abaza, during the ministry of Ignatieff. The Minister of the Navy is Rear-Admiral Ochestakov, who succeeded Rear-Admiral Petshurov. The Minister of Domains is M. Ostrovski, the successor to P. A. Valouiev. The Minister of Public Works, or Highways and Communications, is Rear-Admiral C. Possiet, appointed July 23, 1874. The Comptroller-General, Solski, was appointed in October, 1879. The President of the Council of Ministers is Reutern. All the ministers and heads of administrative departments are members of the Council.

**AREA AND POPULATION.**—The Russian Empire covers one seventh of the land-surface of the globe. The total area is about 8,379,500 square miles. The area of the geographical divisions of European Russia and their population in 1870, the approximate area of the Asiatic possessions, and their population as ascertained at various dates between 1873 and 1880, are shown in the following table. (See EUROPE, AREA OF.)

GEOGRAPHICAL DIVISIONS.	Square miles.	Population.
Great Russia.....	880,798	24,005,459
Little Russia.....	80,226	7,695,861
Eastern Russia.....	546,470	15,143,716
South Russia.....	165,851	5,819,302

Cronstadt, Taganrog, Orenburg, Voroneje, Rostov on the Don, Helsingfors, capital of Finland, Minsk, Nijni-Novgorod, Kovno, Jitomir, Mohilev, and Vitebsk contain between 40,000 and 50,000 inhabitants. In Russia in Asia the largest cities are: Tiflis, population 104,024; Tashkend, containing about 100,000; Andijan, 43,000; Samarcand, 36,000; Khokand, 35,000; Stavropol, 34,328; Irkutsk, 33,800; and Tomsk, 33,795.

The number of emigrants from Russia from 1871 to 1880 amounted to 2,807,000, against a counter-immigration of 2,455,000; a loss to the empire of 352,000 souls, or about 35,000 yearly. Only those who received regular passes are counted among the emigrants. The immigrants are nearly all Germans.

**COMMERCE.**—The total value of the merchandise imports of 1880 was 622,812,000 rubles, against 587,713,000 in 1879; of the exports, 498,672,000, against 627,768,000 rubles. The commerce with Europe and America amounted to 578,334,000 rubles of imports, and 476,365,000 of exports in 1880; with Finland, to 11,442,000 rubles of imports and 9,602,000 of exports; with Asia, to 33,036,000 rubles of imports and 12,705,000 of exports. The commerce with the individual countries in 1880 was as follows, in rubles:

COUNTRIES.	Imports.	Exports.
Germany.....	274,268,000	138,132,000
Great Britain.....	150,455,000	145,640,000
France.....	22,410,000	57,690,000
Austria-Hungary.....	23,062,000	32,547,000
Netherlands.....	7,515,000	25,205,000
Turkey.....	20,870,000	15,340,000
Belgium.....	7,423,000	15,899,000
China.....	22,780,000	2,520,000
United States.....	10,204,000	5,234,000
South America.....	15,972,000	10,000
Sweden and Norway.....	2,925,000	12,125,000
Italy.....	6,310,000	5,118,000
Roumania.....	1,736,000	9,956,000
Persia.....	6,860,000	8,940,000
Other countries.....	20,805,000	10,477,000

There were 6,423,000 rubles of imports from the United States reported for 1879 and no exports to that country.

The exports of cereals in 1880 amounted to 226,410,000 rubles, against 363,261,000 rubles in 1879; the imports of colonial produce, 74,649,000 rubles, against 50,462,000; the total imports of articles of consumption, 133,543,000; exports, 302,696,000 rubles. The exports of textile materials were 95,718,000 rubles, imports 66,953,000; the imports of raw metals 66,953,000 rubles, against 56,596,000 in 1879; the total imports of raw materials, 159,302,000 rubles, exports 153,177,000. The imports of yarns were 41,213,000 rubles, against 61,749,000; of textile fabrics, clothing, etc., 34,229,-

000, against 35,520,000; of machinery and other metal manufactures 94,391,000, against 79,972,000 rubles; the total imports of manufactured objects, 177,536,000 rubles, total exports 4,833,000. The total imports of all other classes were 107,953,000 rubles, total exports 15,659,000 rubles. The imports of precious metals amounted to 12,390,000 rubles, against 13,874,000 in 1879; the exports to 28,778,000, against 7,116,000 rubles. The above analysis does not include the trade with Finland, or that with Asiatic countries. The imports of tea in 1880 were valued at 22,355,000 rubles, against 18,648,000 in 1879. Textile materials were imported from Asia of the value of 1,451,000 rubles, and exported to Asia in the amount of 4,193,000. There was an export of 2,916,000 rubles of precious metals to Asia and no imports thence in 1880, as compared with a net export of 2,174,000 rubles in 1879.

The number of ships entering Baltic ports in 1880 was 8,240, of which 5,696 were with cargoes; the number entering the ports of the Black Sea 5,265, with cargoes 2,493; the number entering the ports of the White Sea 882, with cargoes 337; the number entering the ports of the Caspian Sea 971, with cargoes 919; the total number entering Russian ports 15,358, of which 5,948 were steamers. Of the total number, 2,746 sailed under Russian colors, 2,660 under English, 2,573 under German, 2,047 under Swedish, 1,380 under Turkish, 1,088 under Greek, 892 under Danish, 668 under Austrian, and 576 under Dutch. The merchant marine in 1878 numbered 3,643 sailing-vessels, of the aggregate tonnage of 308,230 tons, and 259 steamers, of about 74,324 tons.

**PETROLEUM REGION.**—The petroleum of the Caucasus is expected to come into competition with the American in Europe as soon as the pipe-line from Baku to Batoum, on the Black Sea, is completed. At Batoum the oil will be pumped into tank-steamers. The total area of the Baku petroleum region is about 1,200 square miles, judging from the limits of surface oil and gas wells. The region is almost without water or vegetation. Scattered over the surface of this desert are dried-up salt lakes and exhausted mud-volcanoes, with numerous springs and pools of oil and gas wells. The boring has been principally confined to the peninsula of Apsheron. Nearly every well that is sunk strikes oil. Many have been abandoned, owing to lack of means or the low price of petroleum. Flowing wells yielding from 2,000 to 4,000 barrels a day are common, and pumping wells yielding from 300 to 600 barrels. The total product rose from 500,000 barrels in 1873, to between 3,000,000 and 4,000,000 in 1881, besides enormous quantities which were wasted for lack of tanking and transportation facilities. The export by sea amounted to 2,946,000 barrels in 1881, against 1,702,200 in 1879.

**RAILROADS.**—The extensive network of railroads has aided greatly in developing the commerce of Russia, internal as well as foreign.

From 1838 to 1865 the number of miles constructed was 2,385; in the five years, 1866-'70, 4,343 miles were built, in the next five years 5,071 miles, and in the last about 3,000 miles. The total length in operation on the first of January, 1882, was 14,076 miles, not including nearly 600 miles in Finland. The Czar approved the plans of the Minister of Railroads in 1875 and previously, for enlarging the existing system to the extent of 6,000 miles. The projected lines include the proposed great Siberian railroad and seven railroads through the coal-basin of the Don. Of the 45 railroad companies in existence in 1879, 10 had constructed their lines without Government aid. Of the 35 guaranteed companies, 15 were guaranteed to the full amount of their capital. The charters of the companies are most of them terminable after periods of from 75 to 85 years; but those of some of the smaller railroads run for only 37 years. The gross receipts of the railroads in 1878, with a mileage of 13,611 miles, were 211,905,758 rubles; the working expenses, 133,120,261 rubles. Their aggregate capital was 1,450,288,196 rubles, 49 per cent of which was held by the Government.

**TELEGRAPHS.**—The length of telegraph lines in 1880 was about 59,140 miles; state lines, 54,080 miles; the lines of the railroad companies, 2,235 miles; Anglo-Indian line, 2,270 miles; Aland Island cable, 60 miles; private lines, 250 miles; military and police telegraphs, 240 miles. The aggregate length of wires was about 134,600 miles. The number of dispatches sent was 7,298,429; private inland dispatches, 5,768,255; foreign dispatches received, 500,126; foreign dispatches sent, 496,955; in transit, 77,223; official dispatches, 455,870. The receipts amounted to about \$6,133,000. The expenditures were \$2,828,000 for wages; \$1,682,000 for other working expenses and maintenance; and \$743,000 for the construction of new lines.

**POST-OFFICES.**—The number of post-offices in 1880 was 4,458; of employés, 15,235. The number of letters and postal cards delivered was 128,817,612; circulars, etc., 9,960,727; newspapers, 88,168,700; total, 226,947,039, against 206,502,269 in 1879. The receipts were 14,132,929 rubles, the expenses 15,299,179 rubles.

**AGRICULTURE.**—The number of serfs belonging to nobles and other private persons, emancipated in accordance with the ukase of March 3, 1861, was about 22,000,000, who were the property of 109,340 owners. The number of crown serfs emancipated was 22,225,075 of both sexes. The owners transferred the lands which the peasants cultivate to the village communes, receiving in compensation a commutation of the value of the labor of the serfs at 6 per cent annual interest—that is, a capital sum of 100 rubles for every 6 rubles of annual profit from the labor of the serfs. Of this sum 20 per cent was paid at once by

the communes and 80 per cent was advanced by the Government, to be repaid by the peasants in 49 annual payments. The crown peasants received their lands on the condition of paying for 49 years the annual poll-tax previously paid by them. Of the total cultivable lands of Russia Proper  $\frac{7}{10}$  per cent are in towns,  $34\frac{1}{10}$  per cent belong to the crown,  $8\frac{1}{10}$  per cent are attached to mines,  $15\frac{1}{10}$  per cent are held by crown peasants, 5 per cent by former serfs,  $19\frac{7}{10}$  per cent belong to noblemen and other former proprietors of serfs, and  $20\frac{2}{5}$  per cent is not brought into cultivation. The agricultural distress which followed the emancipation of the serfs in Great Russia is by many attributed to the retention of the old Russian institution of agrarian communism. The German nobility of the Baltic provinces emancipated their own serfs in 1819, and the latter have served their former lords as agricultural laborers, or by the purchase of land become individual proprietors. These provinces are greatly in advance of Great Russia in agriculture and in popular intelligence. The Czar's Government has occupied itself constantly with plans to arrest the agricultural decadence and relieve the distress of the *mujiks*. Much was expected from the abolition of the salt-tax in the earlier period of Loris Melikoff's ministry; but although the Government lost 15,000,000 rubles of revenue, the price of salt remained almost the same as before. Ignatieff approached the subject, with an ostentatious display of national, Panslavistic sentiment, by calling together commissions of "experts," the most important of which was the one on the liquor question. Another outcome of these expert investigations was the reduction of the purchase-money to be paid by the peasants, and the decree that all payments in service should cease at the end of 1888. A third remedy which was adopted is the colonization of communes which are unable to support themselves on their allotments upon vacant crown-lands. The latest remedy for the agrarian distress is the progressive abolition of the poll-tax, announced in a ukase, June 14th. From the 1st of January, 1883, the lower class in the cities and certain classes of peasants are relieved of the poll-tax, while the Finance Minister is to present to the Czar next year a scheme for replacing the whole poll-tax with other revenues.

**ARMY AND NAVY.**—The military force is divided into the active and the territorial armies. The first consists of the standing military and naval forces. The territorial army comprises those who have escaped being drafted into the active army after four annual drawings, those who have served their time in the active army and its reserve, the Cossack irregulars, and bodies composed of foreign elements. There are 19 army corps, of which the Guards and the Grenadiers each constitute one, and the troops of the Caucasus two. There are 852 battalions of infantry, 24 of engineers, 348 squadrons of cavalry, and 337 $\frac{1}{2}$  batteries of ar-

tillery, with 1,406 guns, in the regular army in active service. The war organization of the regular army comprises 1,766 battalions of infantry, 412 squadrons of cavalry, and 484 $\frac{1}{2}$  batteries of artillery, with 3,772 guns. The artillery have been furnished since 1878 with new cannon in cast-steel. By a decree of August 30, 1882, the 14 regiments of lancers and 14 regiments of hussars have been transformed into dragoons.

The effective of the regular army in 1882 is shown in the following table:

REGULAR ARMY.	PEACE FOOTING.		WAR FOOTING.	
	Men.	Horses.	Men.	Horses.
Infantry.....	625,617	11,149	1,915,703	32,296
Cavalry.....	55,560	61,727	94,466	93,440
Artillery.....	108,610	21,252	210,772	118,800
Engineers.....	20,624	661	43,352	14,020
Total.....	840,711	94,789	2,264,293	258,056

The irregular army consists of the Cossacks of the Don, the Kuban, the Terek, Orenburg, the Ural, Siberia, etc., who under the new regulations furnish the regular army with all its light cavalry. The peace establishment counts about 45,000 Cossacks; their war effective is 156,341, formed into 880 *sotnias*, or squadrons. The entire peace establishment of the Russian army is 974,771 men. The army can be increased in war to 2,733,305 men. The active army in 1881 numbered 907,248. The recruit for 1882 was fixed at 212,000 men. The number of years of service in the line was increased by one year, and the class of one-year volunteers introduced. Notwithstanding the need and desire of the Government for economy, the military expenditures are increased. The war-like impulse which stirred Russia in the spring resulted in more energetic endeavors to perfect the military organization, and strengthened the country for offensive or defensive operations on the western borders. A new strategical railroad was built on the Austrian frontier from Prinsk to Jabinsk, and one laid out to run from Vilna to Kovno, joining the first near Prinsk. A sum exceeding 15,000,000 rubles has been set aside to carry out the plans of General Kaufmann for the fortification of the western frontier, a scheme which has been postponed on account of the financial difficulties of the Government. The expenditure is to extend over several years. (See NAVIES OF EUROPE.)

**FINLAND.**—The Grand Duchy of Finland possesses a constitutional government. The population on December 30, 1880, was 2,060,782, comprising 1,756,381 speaking Finnish, 294,876 Swedish, 4,195 Russian, 1,720 German, 961 Lapps, and 14,052 of foreign birth. The budget for 1882 places the total revenue at 36,320,714 marks. (The Finland mark is of the value of a franc. The gold standard was adopted in 1877.) Of the total revenue 10,000,000 marks are derived from customs, 4,540,-

200 from the land-tax, 2,050,000 net from the railroads, 4,225,000 from the tax on the manufacture of liquors, and 5,741,444 from the reserve fund for military purposes. The estimated expenditures are 35,131,146 marks, of which 8,580,064 marks are for military purposes, including the expenses of reorganization, and 4,020,600 for the service of the public debt. The total debt amounted on the 1st of January, 1882, to 61,422,865 marks, the principal part of which was contracted in Germany. The total imports in 1881 amounted to 154,800,000 marks, 68,400,000 from Russia, 40,600,000 from Germany, 17,400,000 from Great Britain, and 11,200,000 from Sweden and Norway; the exports to 107,300,000 marks, of which 49,900,000 went to Russia and 20,700,000 to Great Britain.

**FINANCES.**—The total receipts of the imperial Treasury from ordinary sources in 1880 amounted to something over 651,000,000 rubles. (The silver ruble is the legal unit of account, and is worth 73·4 cents; the circulating medium is paper money, which is exchanged at a discount of from 10 to 20 per cent and over.)

The receipts were 138,000 rubles more, and the expenditures 113,354,000 rubles more, than the budget estimates.

The ordinary receipts for 1882 are estimated in the budget approved by the Emperor January 2d, at 654,217,870 rubles; the miscellaneous receipts known as the "budget d'ordre," and balanced on the expenditure side of the account, at 22,165,068 rubles; the extraordinary receipts, consisting of borrowed money applicable to railroads and other works of utility, at 88,121,574 rubles; the balance in the Treasury at 2,500,000 rubles; total estimated receipts from all sources, 762,004,512 rubles. The estimated total expenditures are as follow: Ordinary expenditures, 658,595,151 rubles; "budget d'ordre," 22,165,068 rubles; extraordinary expenditures, 72,744,293 rubles; excess of receipts, 8,500,000 rubles. The state revenue for the half-year ending June 30th showed an actual increase of 18,985,079 rubles, and the expenditure a decrease of 23,621,226 rubles as compared with the same period of 1881.

The foreign loans of Russia are payable mostly in pounds sterling, the domestic debt in paper currency. The foreign debt on January 1, 1880, reduced to paper rubles, the exchange value of which in London, at that date, was equal to about 50 cents, stood at 672,488,519 rubles, against 720,270,163 rubles on January 1, 1879; the funded domestic debt at 1,367,385,206 rubles, against 1,080,271,995 rubles in 1879; total consolidated debt, 2,039,873,725 rubles, against 1,800,542,158 in 1879.

In Asia the power of the White Czar advances with great strides. The Shah of Persia, recognizing the importance of railroad connections with Russia, allowed the Russians to rectify their boundary so as to include an outlying portion of his own dominions of great natural resources as well as of military impor-

tance (see PERSIA). The mercantile pioneers who flocked to Kuldja to take advantage of the new commercial treaty with China, met with obstacles to their commerce with the interior. General Kolpakovsky, appointed Governor-General of the Steppes and commander of the newly-formed military district of Omsk, has the task of looking after the relations with China. General Tcherniaeff, the conqueror of Khokand, was appointed Governor-General of Turkistan as the successor of General Kaufmann.

**GORTCHAKOFF.**—Prince Gortchakoff handed over the direction of the Foreign Office to M. de Giers, March 22d. He was eighty-four years of age, and his retirement had been many times announced but deferred through his reluctance to resign the position he had so long held. For more than thirty years he has been the director of the foreign policy of Russia, and the most influential statesman of Europe until his aims were thwarted and his power eclipsed by Bismarck. His secretary, who succeeds him, had for five years acted as his substitute and is well known to all the courts of Europe. He was particularly acceptable to Germany, his appointment being considered a pledge of peace after anti-German sentiments had been fanned into a flame by the speeches of the impetuous General Skobelev, foreboding, it was feared, the selection of Ignatieff, who was supposed to have aspired to the position, and a policy of Slavic extension. The rank and title of Chancellor of the Empire were continued to the brilliant diplomatist who had served the state for sixty-five years.

**MINISTER GIERS.**—Nicholas Carlovitch Giers was born May 21, 1820. His family came originally from Sweden. He entered the Asiatic Department of the Ministry for Foreign Affairs at the age of eighteen. His first important service was in Austria during the Hungarian campaign of 1848. He held diplomatic positions in Turkey and Roumania, was sent as a special agent to Bessarabia during the Turkish War of 1855, became Consul-General to Egypt in 1856, and to Wallachia and Moldavia in 1858. From 1863 to 1869 he was ambassador to Persia, where his services helped greatly to cement amicable relations with the Shah. After serving as Minister to Switzerland and to Sweden, he took charge of the Asiatic Department in 1875. In 1876 during a temporary absence of Gortchakoff, in 1877 during the seven months of the Turkish war, and in 1878 during the attendance of Prince Gortchakoff at the Congress of Berlin, he had sole charge of the ministry, which he has retained to all practical intents ever since, as the Chancellor's age and infirmities prevented him from transacting business for any continuous period.

**POLITICS AND LEGISLATION.**—The reforms which were discussed during the last years of Alexander II and the first year of the present reign have been abandoned through the decision, or indecision, of the uncrowned Czar. At the notable Cabinet sitting of March 20,

1881, the project of representative institutions elaborated by Count Loris Melikoff, which would have been signed by the late Czar if the murderous arm of the Nihilist had been stayed for a few days, was approved by a majority of nine against five. Pobodonoszeff and the other defenders of the autocratic principle prevailed upon the Czar to reverse the decision of the Council. Ignatieff, as the representative of pure Russian ideas, was called to the place of the defeated Melikoff. He did not differ, however, from the rest of the leading statesmen upon the question of the necessity of introducing self-government. The Russian people—that is, the eighty millions of serfs lately emancipated—were reduced to the verge of that state of misery which leads to anarchy and revolt. The political disorders of Russia are of long standing, but the conversion of a nation of slaves into freemen has brought graver disorders of a social nature. The country has retrograded economically since emancipation. The emancipation was imperfect, like all such acts. The rural economy and the distribution of land could not be adapted to the new conditions of labor, while the laborers themselves were naturally demoralized by their sudden freedom. Thriftlessness, indolence, and drunkenness are the national vices of the Russians. The peasants received their lands with the obligation of paying for them in a term of years. The peasants have fallen into the power of money-lenders; agriculture has gone backward; idleness and vodka-drinking have increased; live-stock and implements have disappeared; and dishonest merchants have injured the market for the produce of the land and labor by mixing different grades of wheat. At the same time the burden of the Government has increased. The debt, which is the heritage of many wars and generations of extravagance and corruption, has grown to larger proportions. The country is again flooded with a fluctuating, debased paper currency. The Government is unable to borrow more money abroad. All sections of the educated class call for radical changes in the system of government, while socialists proclaim all accumulated wealth to be applicable to the needs of the people. Count Ignatieff appointed many commissions to inquire into the grievances of the people. In combating those which arose from social and economical causes he had the approval of the Czar. The socialist doctrines, apart from their political and revolutionary tendencies, agree with the theory of the czarism. The responsibility of the Czar for the happiness of the people was confirmed in the manifesto of May 10, 1881, written by Pobodonoszeff, in which the Czar asserted the principle of the autocracy, and swept away the constitutional doctrines involved in the proposition of Loris Melikoff. Ignatieff, in view of the financial straits of the Government, the agitation against the bureaucratic system, and the impoverishment and misery of the people, saw

the necessity of calling trusted representatives of the people into counsel, in order to relieve the bureaucracy of some of the odium, and avert a revolutionary catastrophe. True to the Slavistic ideas of which he was the representative, and, as such, obtained the confidence of the Czar, he elaborated a scheme for the revival of an ancient Slavic institution, the representative body called the Zemski Sobor, which the Czars before Peter the Great convoked for consultation.

The anti-Jewish agitation was connived at under the administration of Ignatieff. The liquor-sellers, who catered to the drunken habits of the peasantry; the usurers, who profited by their distress; and the merchants, who practiced deceptions from which they suffered, belonged to the Jewish race. Count Ignatieff allowed the peasantry full license in their barbarous excess, with the design of ridding the country of the Jews, who with all their faults were a useful and necessary class. The Jews petitioned for months to have a ukase issued forbidding the persecutions. The local officials, taking their cue from their superiors, in many cases permitted the outrages to take place unhindered. Jews were punished for defending themselves with weapons, while their assailants went free. The regulations restricting their rights of residence and free migration, which had long been inactive, were strictly enforced, as also the laws requiring them to close their shops on Sundays and Christian holidays. The atrocities were exaggerated in the reports published abroad, but they were sufficient to drive thousands of families out of the country, and seriously unhinge mercantile business in many parts of Russia. The worst excesses occurred in Little Russia, or the Ukrainé. A false ukase was read in some towns, declaring that the Czar gave up the Jews to the people for pillage. The belief that the persecutions were approved by the Government was generally prevalent.

The Israelites of Europe made efforts to obtain diplomatic intercessions for their brethren in Russia, but none of the Governments ventured to make representations on the subject. Sir Charles Dilke stated in the English Parliament that consular inquiries corroborated only one case of murder in Balta, a town in South Russia principally inhabited by Hebrews, where shocking riots occurred at Easter, 1882. President Arthur was freer in his promises than the heads of European Governments, declaring that he would exert himself as far as possible to induce the Russian Government to effectually protect the Jews, and that the minister in St. Petersburg had been instructed to protect the rights of American Jews in Russia.

There were five committees in European countries and one in America organized for the relief of the Jewish refugees. The number aided during the year 1881 was about 25,000, of whom some 15,000 were settled in the United States, 2,000 were dispersed over Europe, and 8,000 were sent back to Russia. The exodus

in the earlier months of 1882 was greater than in 1881.

At length, toward the end of May, and just before the dismissal of Ignatieff, it was publicly made known that the Government was resolved to punish severely all outrages against Hebrews and their property, and dismiss governors and other officials who failed of their duty in this respect.

During the twelve months of Ignatieff's ministry he not only set on foot many commissions of investigation into the causes of social and political disorders, but he took positive steps to loosen some of the fetters which aggravated certain sections of the nation. The difficulties with the Vatican were terminated to the contentment of the Catholics, who form 72 per cent of the population of Poland. The matter was not finally settled until the visit of Minister Giers to Rome in the autumn. The Pontiff obtained the right, withheld for many years, to nominate to vacant Polish sees. The use of the Polish language was allowed in the Catholic seminaries in Poland, where Polish and Russian were both made obligatory, and even in the seminary in St. Petersburg. The Poles received permission, retracted after the retirement of Ignatieff, to have a newspaper and theatre in St. Petersburg. Of greater importance were the concessions granted to the Old Believers and other sectaries, who number over 14,000, and constitute the most industrious and law-abiding class of the population of Muscovy. Practical measures for the solution of the liquor question were taken under Ignatieff. Plans were adopted for the migration of peasants from unproductive districts. With the Finance Minister he established a land-bank.

Ignatieff marked out for himself a clearer and more comprehensive policy than his predecessor, Melikoff. He was a Pan Slavist, but not an Old-Russian of the type of Katkoff and Pobodonoszeff. He formed plans which he thought would end the revolutionary crisis and satisfy the aspirations which have been seething in Russian society for half a century, and can no longer be confined by repressive measures. Another man with creative intentions would not have taken office on the pledge of the May manifesto, affirming the inviolability of the autocracy. Ignatieff, to realize his ideas, had to extricate himself from his false position, and resorted to the wiles which had earned him, when in Turkey, the epithets of "father of lies" and "Menteur Pasha." He never commanded the confidence of the public, nor did he gain that of his imperial master, though he came to be considered indispensable as the "tamer of the Nihilists," by the energetic action of the police in unearthing revolutionary conspiracies, and the fact that no attempt on the life of the Czar occurred. The outbreaks against the Jews and the Germans were permitted, not merely as an escape-valve for agricultural distress, but as a development of the anti-European spirit. Ignatieff was wise

enough to see that the empire could not be preserved, much less extended over the other Slavs, by recasting everything in the Muscovite mold. Hence he encouraged the revival of national Esthonian and Lithuanian sentiments, relaxed the restrictions on the Poles and their religion, and endeavored to place the persecuted sectaries on the same legal footing as the Orthodox. Ignatieff was obliged to present his main scheme prematurely, because his influence with the Czar was already shattered. It was to give the Russian people a voice in the government, but was prefigured as the revival of an ancient Russian institution which had nothing in common with European constitutionalism. This old representative institution was the Zemski Sobor, or National Assembly, the convocation of notables, which the Czars before Peter occasionally ordered when they wished an indorsement of their acts by the estates of the empire. Pobodonoszeff, Procurator of the Holy Synod, the Czar's old tutor, who has constituted himself the guardian of autocracy, warned the Emperor of the intent and consequences of this disguised constitutional innovation. The Cabinet voted against the project, and Count Ignatieff asked to be relieved of his post. On the 12th of June the Czar gave him his dismissal, and appointed Count Tolstoy Minister of the Interior.

The new minister appointed to deal with the problem of Nihilism, and the causes of discontent, was the same who, by introducing the classical system of Katkoff in the higher schools, when Minister of Instruction from 1866 to 1880, had aggravated the political ferment which he sought to destroy, and first caused it to take the form of revolutionary Nihilism. Among the thousands of students who were left hopeless and breadless by the change in the academical standard, the nucleus of the Nihilistic party was formed. The revocation of these rules was the first remedial measure of Melikoff. Tolstoy's elevation indicates the close of the epoch of remedial reform, and of the immediate prospect for any kind of representative government. The representatives of the policy which the Czar chose to follow—Katkoff, Pobodonoszeff, and Tolstoy—promise to restore the filial devotion of the Russian people to the Czar, and their fidelity to the national Church, by rigidly repressing all independent political and religious thought. The measures of Ignatieff for the relief and protection of the sects were rescinded. An act of the Holy Synod allowing the appointment of popes without any seminary training indicates the reliance of the ruling party on ignorance to retain the people within the fold of the Orthodox Church, and upon persecution to drive back the sectaries. The new minister, whose policy was to preserve the autocracy and the bureaucratic system, its concomitant, applied himself assiduously to reforming the abuses in the administration, which had become more flagrant than ever under Ignatieff, whose com-

plaisant nature would not allow him to dismiss a subordinate for any cause. Tolstoy was by training a rigorous bureaucrat of unimpeachable integrity, who was not inclined to suffer negligence or irregularity, apart from the consideration that the success of his policy depended on reforming the abuses of the bureaucratic government. The Tolstoy government depends principally upon lightening the burden of taxation to stem the tide of discontent, and followed the scheme of tax reform already inaugurated by Ignatieff.

Pobodonoszeff, as the Czar's representative in the Holy Synod, proposed to lay deep the foundations of loyalty and orthodoxy by turning all the public schools into parochial schools. He directed the popes and bishops to anathematize atheists and Nihilists, and strictly catechise their parishioners so as to check any tendency to freedom of thought on religion or politics. Count Tolstoy announced, nevertheless, a plan for the toleration of the "least harmful" of the sects, meaning the Old Believers of Muscovy.

**NIHILISTS.**—Ignatieff took more thorough police measures against political conspirators than Loris Melikoff, who hoped that the Nihilistic fury would abate after constitutional reforms, until the murder of Alexander II rendered Melikoff and his reforms impossible. When, after a few months of quiescence, the Nihilists again raised their heads, and published threats against the new Czar, who was securely immured in Gatchina, the police found the office of the "Tchernay Peredel," their most violent organ, and arrested there a lady of the noble class, Marie Constantinovna Kryloff, and three others. This was before the attempted murder of General Tcheverin by the young noble Sankoffsky. On February 21st the twenty Nihilists accused of being implicated in the eleven great crimes, beginning with the murder of General Mesentsoff and ending with that of the Czar, were tried and convicted, ten of them being sentenced to death as accomplices in the regicide, which sentence was commuted to hard labor in the Siberian mines. On March 30th General Strelnikoff, Public Prosecutor at the Kiev Military Tribunal, was assassinated. Notwithstanding numerous arrests the "Narodnaya Volia" appeared occasionally, and the Nihilists were evidently aiming at the life of the closely-guarded Emperor. The coronation was indefinitely postponed. In April a mine was discovered under the Moscow Cathedral, where the coronation was to take place. A plot to blow up the Kremlin was also detected. In June a band of conspirators, forty in number, was arrested in St. Petersburg. They met at the house of a veterinary surgeon, and comprised ladies, military officers, and, among others, a man filling a confidential post in the Ministry of the Exterior. The garrison of the Peter and Paul prison was discovered to be infected with Nihilism to such an extent that a considerable number of condemned persons

who were supposed to be in Siberia were found to be living in the fortress, in the enjoyment of many indulgences. The Czar never showed himself outside of his voluntary prison, except on three occasions, when he visited St. Petersburg, and on the visit to Moscow, in September, 1881.

A number of societies were formed with the object of combating Nihilism. The Sviashennaya Druzhina, or Holy League, was formed by nobles and rich merchants, and employed a great number of hired agents. It borrowed the secret method and organization of the Nihilist committees. The head of the organization was Pobodonoszeff. The Dobrovolnaya Ochrana, or Volunteer Guard, was formed of military and civil officers. It was directed by Count Vorontzoff Dashkoff, the Minister of the Imperial Household, and had the support of Count Ignatieff. This society had also a political aim, that of constitutional and land reforms, which was expounded in a journal called the "Northern Lights," published at Leipsic. Among other associations of a similar character was the Anti-Terrorist Society, still more secret and Nihilistic than the Druzhina, which stood in some relation to the police, and endeavored to spy out the movements of the Russian revolutionists in the other parts of Europe as well as in Russia.

**RUSSIA, RELIGIOUS LIBERTY IN.** The condition of the vast Russian Empire, in regard to religious liberty, or toleration of conflicting opinions and views, is anything but encouraging or satisfactory. Dissenters from the established Church of every kind and description exist largely in Russia, and, though nominally millions are entered on the records as belonging to that Church, they do not acknowledge their obligations to the Church of the land, but protest most earnestly against invasions of the rights of conscience. Religious complications frequently occur, and the Government has its hands full in endeavoring to unravel and manage these annoying difficulties. Not long since several hundreds of Tartar families in the eastern district of Ufa and Kazan abandoned the "Orthodox" or state Church, and openly gave in their adhesion to Mohammedanism, to which they had all along been attached. What to do with these and the like cases is a puzzle to the authorities. In the western district, i. e., Poland, there are large bodies of inhabitants who once belonged to the Greek-Uniat faith. Officially, as far as Government is concerned, this faith is dead, having expired some forty years ago, and those professing it are counted in with the "Orthodox." But, though not calling themselves "Uniat" any longer, many of these joined the Roman Catholic body in Russia, and refuse to be considered "orthodox." What is to be done in such cases? No one seems to know. In the south, in the heart of "Little Russia," the old conservative region, dissent has made considerable progress. The sect of

the Stundists has sprung up there, and is said to be increasing rapidly, owing chiefly to the excellent moral effects wrought on its adherents by its teachings and example. According to the law, as it now stands, all these ought to be compelled to return to the bosom of the established Church; but expostulation produces no result, and it is doubtful if persecution by force will be any more effective. The Stundists are well organized, and claim for themselves the same rights as are possessed by the Baptists and other Protestant denominations in Russia.

Some think then, that, in view of all these difficulties and perplexities, the best thing to be done is to establish universal liberty of conscience and freedom in religious matters. Not only is this best in principle, but as a matter of policy, and, for the good of the "Orthodox"

Church itself, it ought to be done. Give the Church its fair field, say the advocates of this view, and rouse up its clergy and members to a just sense of their true position and privileges; let the truth which the Church teaches have its rightful opportunity to appeal to the people on the one ground of truth and right, freed from the trammels of state interference and state control, which are odious to the masses, and the Church will not only be able to hold her own, but will commend the soundness of her doctrine, as set forth in the old Catholic creeds, to the minds and hearts of multitudes throughout the empire. Whether the Government, under the manifold evils and dangers to which Russia is now exposed, will have wisdom and discretion sufficient to meet the present emergency, is not at all certain, and yet remains to be seen.

## S

SALVADOR. (See "Annual Cyclopædia," 1881.)

SCOTT, Rev. LEVI, A. M., D. D., senior Bishop of the Methodist Episcopal Church of the United States, died July 13, 1882, on the farm near Odessa, Del., where he was born in 1802. His early life was without educational advantages, and he was brought up on the farm and only attended school during the winter. He undertook to learn the trade of tanner when sixteen, but after four months' work he abandoned this, and then took up carpentering at Georgetown, D. C. His health, however, gave way after a short time, and he returned to the farm and followed the pursuit of a cabinet-maker until he was twenty-one. At this time he was converted, and thereafter devoted himself to preparation for the ministry. In 1826 he was appointed by the Philadelphia Conference to Talbot Circuit, Maryland, and in the next year was transferred to the Dover Circuit, Delaware. The following year he was ordained deacon, and appointed to the St. George's charge, Philadelphia, which he retained until 1830. In this latter year he married Miss Sarah H. Smith, of Westchester. His health breaking down from excessive labor, he was compelled to ask for a supernumerary position. He was placed on Kent Circuit, Maryland, in 1833, where he remained but one year, being made presiding elder of the Delaware district in 1834. From this time on he occupied various positions in the Church, always with great credit. In 1840 he became principal of Dickinson College Grammar School, in which position he continued three years. In 1840 the Wesleyan University conferred on him the degree of A. M., and six years later the college of his native State conferred upon him the honor of D. D. In 1848 he became assistant book agent of the Methodist Book Concern of New York. In 1852 he was elect-

ed a bishop, in the official work of which office he was actively engaged until 1872. A few years before his death he was stricken with paralysis and deprived of his faculties, which he never recovered.

SERVIA, a kingdom in Eastern Europe, formerly a province of the Turkish Empire, which became self-constituted in 1829, and was acknowledged to be completely independent in the Treaty of Berlin. The executive power resides in the King, assisted by seven ministers. The legislative authority is vested in the King and the Skuptchina, or National Assembly, which consisted in 1882 of 160 members. The King appoints 40 members, and the rest are elected by the citizens paying direct taxes, at the rate of one member to 2,000 electors. The Senate, which existed formerly, was transformed by the Constitution of 1869 into a Council of State, charged with the elaboration of laws, but without legislative functions.

The members of the ministry are as follows: President of the Council and Minister of Foreign Affairs, M. Pirotchanatz; Minister of Justice, D. Radovitch; Minister of Finance, T. Miyatovitch; Minister of Public Works *ad interim*, M. Garashanin; Minister of War, General T. Nikolitch; Minister of Public Instruction and Worship, S. Novakovitch. Garashanin was Minister of the Interior until his unpopularity, due to repressive regulations, led to his retirement in the latter part of 1882. There is no nominal occupant of the Ministry of the Interior since his resignation.

Prince Milan Obrenovitch, who was born in 1855, and succeeded to the throne after the assassination of his uncle, Prince Michael, was proclaimed King by an act of the Skuptchina of March 6, 1882. General Tcherniaieff proclaimed Milan King of the Servians in 1876, during the Servian war with Turkey, but the act was disavowed by the Government, of

which Ristich was then the head. The Servian Government did not accede to this elevation, through the opposition of Austria. Since the preponderance of her influence over the King and Government, the fears of Austria have been removed. During the troubles with Herzegovina, the Prince understood that there were no objections to his assumption of the royal title. The Hapsburg Government hoped by this guarantee of the independence and inviolability of Servia to appease the anger of the Servians at the measures taken for the subjugation of the Herzegovinians, and to arrest the revival of great Servian aspirations.

Obren, from whom the reigning house of Servia has its name, was a wealthy Knez, or chief, of the last century, whose widow married a clansman, and by whom she had a son, Miloch Tcho, the founder of the dynasty. This young farmer distinguished himself at the siege of Belgrade when the Servians, under the Haiduk leader, Kara George, wreaked vengeance for centuries of tyranny upon the Turks. When independence was established in 1804, there followed the long conflict between the Haiduks and the Hospodars, or Knez. The Servians are democratic by nature, and the popular party won and placed its leader, Black George, at the head of the state. After the reconquest by the Turks in 1814, and their terrible reprisals, they found a tool in Miloch, who had succeeded to the estates of Obren. This Hospodar was the supporter and adviser of the vizier Solymán in his tyrannies, and became the possessor of unlimited wealth. After wreaking vengeance on his rivals, he saw the way clear for a bold stroke, and, playing false to the Turks who had conferred on him the opportunities for plunder and made him Overknez of his district of Rondnik, he joined the combatants for liberty who held the mountains, and proposed to them to take the lead of the rebellion. The revolt was successful with the aid of Kara George, who came back from exile. Miloch betrayed the former prince to the Turks, and every other dangerous rival he assassinated, but the people supported him as their only hope of liberty, and he succeeded in making peace at last on favorable terms. The position of the new ruler of Servia was strengthened year by year, but never defined until in 1829 he summoned the Skuptchina, the Parliament which had been established by Kara George in place of the smaller Soviet of Turkish times, and after surrounding them with soldiers made the request that they should swear allegiance to him as hereditary Prince of Servia, and petition the Sultan to recognize him in that capacity. A firman came from Constantinople granting full autonomy to the Servians, and commuting the Turkish taxes into an annual tribute. Miloch proclaimed a constitution embodying Greek and Slavic customs, and declaring all Servians free and equal. Each commune was obliged to pay indemnities for the crimes of its members, and deliver up the culprit to justice. Miloch ruled

as a capricious despot, never summoning the Skuptchina, and entirely unrestrained by the constitution, or by the new one which he produced when called to account for his tyrannies by Russia. Avarice was his ruling passion, and his methods of extortion were more intolerable than Ottoman exactions. In 1839 the outraged Servians revolted. Miloch abdicated in favor of his popular oldest son, Milan. A Skuptchina installed Milan and his brother Michael as joint rulers with greatly restricted powers, but three years later they were driven out by the adherents of Kara Georgevitch, the son of the liberator. In 1859 the house of Obrenovitch was restored by another revolution, in the person of Prince Michael, the first enlightened ruler that Servia ever knew. He was succeeded by his nephew, Prince Milan, now King. The house of Obrenovitch was first formally recognized by Europe as hereditary princes of Servia in 1869.

**AREA AND POPULATION.**—The area of Servia is 48,590 square miles. The computed population on December 31, 1880, was 1,700,211, as compared with 1,669,387 as returned in the census of 1878. Of the latter number, 865,422 were males and 834,789 females. The population in 1866 was divided among the different nationalities in the following proportions: Serbs, 1,058,189; Wallachians, 127,545; Bohemians, 24,607; Germans, 2,589; other nationalities, 3,256. The population belonged to the Greek Catholic Church with the exception of 2,049 Israelites, 6,306 Mohammedans, 4,161 Roman Catholics, and 463 Protestants.

Belgrade, the capital, contained in 1878, exclusive of the garrison, 26,970 inhabitants, and about 80,000 in 1882. The next largest town is Nish, with about 20,000 inhabitants.

**COMMERCE.**—The principal commercial intercourse is with Austria. The only other trade is with Turkey and Roumania. The chief article of export is live hogs, which feed in great herds on the acorns, which abound, and are driven to the markets in Hungary and the adjoining parts of Austria. The extent of the foreign trade for the three years last reported was, in francs, as follows:

YEAR.	Exports.	Imports.
1878.....	\$81,711,207	\$26,675,688
1874.....	85,881,876	81,788,196
1875.....	85,014,874	81,219,248

The quantities of the leading exports in 1875 were as follows:

EXPORTS.	Quantities.
Cereals (kilos).....	24,961,742
Cattle (number).....	24,586
Hogs (number).....	867,643
Sheep and goat skins (number).....	1,117,184

**FINANCE.**—The revenue is derived mainly from direct imposts, including a general poll-tax. The budget for 1881-'82 places the total receipts at 32,635,000 dinars (1 dinar = 1 franc), derived as follows: Capitation tax, 11,600,000 dinars; patents, 150,000; customs, 4,200,000;

food-taxes, 750,000; tobacco excise, 900,000; salt monopoly, 400,000; tobacco monopoly, 250,000; mining monopoly, 40,000; liquor excise, 800,000; fees, 1,600,000; public property and enterprises, 1,770,000; receipts of fund for public instruction, 1,050,000; of fund or public sanitation, 900,000; sinking fund of public debt, 2,575,000; balance in the Treasury, 2,000,000; other receipts, 10,175,000. The expenditures were estimated at 32,616,192 francs. The chief items were 7,409,937 francs for the service of the public debt, 8,933,595 for war, 4,846,747 for the Ministry of the Interior, 2,636,389 for the Ministry of Education and Worship, and 2,408,820 for the Ministry of Public Works.

By the financial operations of the present ministry the public debt has advanced to over 100,000,000 francs. It consisted before of a small internal loan and the foreign loan of 20,000,000 francs, both raised to pay the cost of the Turkish War. The Government was involved in losses through the failure of the Union Générale and its Austrian branches. These were variously reported to be from 17,000,000 francs to much larger amounts. The Austrian Treasury in some indirect way came to the assistance of Servia, and by its sacrifices aided in extricating the King's Government from its embarrassment.

**POLITICS AND LEGISLATION.**—The political crisis, which began with the refusal in 1880 of Ristich, the Liberal Premier, to sign a commercial treaty with Austria and to agree to the Austrian railroad prospectus, reached its climax in 1882. The treaty was thought by the Minister and the Skuptchina to confer unequal benefits upon Austria and the railroad convention to be designed to convert the Servian railroads into strategic routes for the use of the Austrian army in the event of a war with Russia. A threatening note from Vienna drove Ristich to resign. The new Skuptchina was elected through Austrian influences. Pirotchanatz took the helm. The treaty was concluded, and the railroad convention approved. The construction of the railroads was undertaken by the Union Générale of Paris. The failure of this enterprising society in February, occurring at the time when the Servians were excited by the conflict between Austria and their neighbors of kindred race, the Herzegovinians, caused the struggle to be renewed. The Radicals interpellated the Government with regard to the losses sustained by the nation through the failure of Bontoux's company. Pirotchanatz made evasive and unsatisfactory replies. On the refusal of the ministry to give the information demanded, fifty-five members left the House and resigned their seats. This reduced the Skuptchina to less than the three fourths necessary for a constitutional quorum. It suspended its sittings pending the elections to the vacated seats, which took place in May. Of the members who had thrown up their mandates, forty-nine were again returned,

though the Government had exerted a pressure on the constituencies which was unexampled even in Servia. The King and his ministers had alienated the entire population. The opposition had started with the friends of democratic doctrines, of whom there were forty in the Skuptchina elected to carry out the designs of Austria. The Prince, in humbling himself to Austria and sacrificing Servian interests, aided in the spread of these advanced ideas. The party obtained a strong hold among the rural population. The adherents of Ristich joined them. The clergy, with the Russophile Metropolitan Michael at their head, threw the weight of their influence into the scale. The Government took the unfortunate course of deposing the Metropolitan Michael. Other violent acts added to the general detestation that was felt for the King and his Cabinet. A breach of the Constitution was committed in a neglect to order a general election after the resignation of the fifty-five members, but the newly-made King would not have felt safe on his throne if he gave the country an opportunity to express its condemnation and antipathy. The return of the forty-nine members placed the Government in the same dilemma as before. Pirotchanatz was alarmed and confounded, and immediately offered his resignation. The Radical party offered the terms on which they would allow the government to go on. These were, that they should be taken into the committees of the House and have the just share in legislation which had been denied them, and that steps should be taken to call a Great Skuptchina to revise the Constitution and secure the larger liberties demanded by the whole nation. The King ordered Pirotchanatz to remain at his post, and procure a majority and a quorum by any means. The elections of the returned Radicals were pronounced null and void by the rump Assembly, and the candidates next on the poll-lists declared elected. To give them their seats without certificates of election, which the local authorities refused to make out, was the final act of the *coup d'état*. The mock Assembly sat a few weeks, and then adjourned to avert danger. The frame of the popular temper was critical in the extreme. If it had not been for fear of provoking an Austrian military intervention and bringing worse ills upon their country, the Servians would have chased their King out of his dominions. The anger of the people found an exponent in Ilka Markovitch, a political enthusiast, who made an attempt on the life of King Milan on October 28d. This lady was moved to the act by a private grievance in addition to motives of fanatical patriotism: her husband, a valiant officer, had been shot without cause, by orders of a military tribunal, during the Turkish War, and her property confiscated by the Government. The King was in consternation, and turned to Ristich, endeavoring to rally to the support of the throne

the Liberals as well as the Progressists. The Cabinet again offered their resignations, but the King induced them to remain, declaring that he did not intend to change his advisers, but wished to unite the friends of authority and order against the revolutionary demands of the Radicals. The adherents of Ristich, who had followed a philo-Russian policy, and those of Pirotchanatz, who would reduce the country to political and economical vassalage to Austria, were mere coteries, while the majority of all classes were inimical to the King and the system with which Pirotchanatz and Ristich were identified. The most intelligent classes, as well as the main body of the people, were imbued with the democratic doctrines of the Radical party. These doctrines showed the influence of the socialistic theories of Bakunin. The demands of the party were, democratic institutions, complete freedom of speech and the press, a radical readjustment of taxation according to advanced theories, and the largest development of local self-government.

**SEWAGE DISPOSAL.** A sanitary and engineering problem of the highest moment is the question of the disposal of city sewage, and of its utilization in restoring the abstracted elements to the soil. The question of sewage disposal is simpler and also more urgent on the Continent of Europe, where the English system of sewers for the reception of all waste and excrementary matter has not been generally introduced. Among German and other Continental sanitarians the sewer-pipe system is now generally condemned.

The people of Paris have long desired to get rid of their barbarous and unwholesome system of privy-vaults and night-carts. The happy results of the utilization of the sewage for fertilizing purposes at Gennevilliers suggested the plan of connecting the vaults with the sewers and turning the whole of the night-soil, which amounts to five or six million pounds per diem, into the general sewerage, to be conducted away to enrich the soil in the depths of the forest of St. Germain or some more distant region. Physicians and hygienists protested on account of the dangers of the exhalations from the vents and culverts and the conveyance of the germs of disease to the lands to be manured. Berlier's system of pneumatic voidance was devised to meet this want. It has been applied on a scale sufficient to test its merits in the Pépinière barracks, which lodge one thousand men constantly. The water-closets empty into a cubic receptacle, which contains a sieve for the retention of foreign substances. The sieve can be shaken from the outside to allow all decomposable matter to pass through. The receivers communicate with a number of cylindrical vessels. The cylinder contains a large float, which ends below in a rubber globe fitting tightly in the aperture of the outlet-pipe. When enough material has entered to raise the float, it is rapidly evacuated by reason of the difference of air-pressure in the

pipe and outside. The rubber valve then closes again the conical orifice of the evacuating-pipe. A vacuum of fifteen centimetres of mercury is sufficient for the operation. The active circulation of the air in the pipes produced by the aspiration of the air-pump has the effect of thoroughly mixing and liquefying the excremental materials. This prevents the stoppages in the pipes which occur when pneumatic pressure is employed. The material is drawn into a reservoir in the works at Levallois-Perret, from which it is distributed by means of a force-pump to distances of from fifteen to thirty miles. An engine of twenty-horse power drives both the air-pump and the rotary force-pump. The air-pump is of the hydro-pneumatic type, in which the piston works in water. It is much more powerful than is needed for the purpose, being capable of producing a vacuum of seventy centimetres of mercury in a few minutes. No smell escapes from the receiving or voiding apparatus or the iron pipes with joints of lead.

In Dantzic, Berlin, and Breslau the sewage has been applied to irrigation with satisfactory results, economical and sanitary. The system of filtering and precipitation with chemical agents was tried in Germany, but the purification was imperfect. The plan of conducting the sewage waters upon farming-lands was adopted. The water is cleansed of the grosser solids before being pumped into the conduits. At Dantzic, about a third of a sandy tract of 1,250 acres has been fertilized, and is rented for gardening at from \$20 to \$28 an acre. The company which built and carries on the works has the use of the land for thirty years. The death-rate has diminished 21 per cent. The surplus water, which is drained into the Vistula, retains one eighth of the organic matter, one sixth of the ammonia, and one half of the mineral impurities of the original sewage-water. The municipality of Berlin bought two large tracts, one of which, at Osdorf and Friederikenhoff, has been reclaimed with the sewage, and lets for high rents. Breslau disposes of its sewage on the same plan. The lands irrigated with these rich liquids are said to be not insalubrious. When the plots of waste land on which about a foot of the solids have been allowed to accumulate are dried and broken up no ill odors or unhealthy exhalations are given off. The German experience of this method of turning noxious drainage-matter into a means of supporting life is that the expenses of pumping, etc., are abundantly recovered.

Schloesing's process of precipitating by refrigeration the ammonia of excremental matter in the form of ammoniacal phosphate of magnesium supplements Berlier's methods of successfully removing the most dangerous and offensive portion of the refuse of great cities and rendering it useful.

The system of Hanson for the purification and utilization of sewage has been in use at

Tong, near Bradford, in England, for several years. Black ash-waste, a by-product of alkali-works, is used in conjunction with lime in the purification, and is said to remove the germs of infection. There is from one and a half to two tons of waste produced for every ton of soda. The waste contains the sulphur used in the pyrites-kiln, amounting to one fifth or one sixth of its weight. It is in the form of sulphide of calcium, and under the action of the atmosphere becomes the disulphide. Brought into contact with caustic lime this precipitates in the forms of monosulphide and sulphate, carrying off all the sewage impurities. These deodorizers are stirred with the sewage in cisterns, and the sewage is then conducted into settling-tanks. The residuum is used as manure. The sewage furnishes the hydraulic power to work the apparatus.

SKOBELEFF, MICHAEL DIMITRIEVITCH. This illustrious Russian general died at Moscow, July 7th, of a stroke of apoplexy, before he had passed the thirty-seventh year of his age. Born near Moscow, in October, 1845, the son of an officer of the Guards, and grandson of a distinguished general who had risen from the ranks, he studied at the University of Moscow; but, being expelled for engaging in a students' riot, he obtained a commission in the Guards, and, serving in Poland in 1863, was promoted to a captaincy. He served in the Caucasus a couple of years, and then in Central Asia, winning the reputation for daring courage which was the source of his magnetic influence over the soldiery, and the secret of his success. He was made a colonel, and attached to General Kaufmann's staff. He took part in the expedition against Khokand, and on one occasion is said to have ridden with 150 Cossacks into the enemy's camp the night before the proposed attack, and caused the whole force of 6,000 or 7,000 to throw down their arms and take to flight in terror.

In this campaign he was promoted to the rank of major-general. He was given the command of the next year's expedition, and at the head of 4,000 men he subjugated Khokand. While officiating as governor of the new province, the Turkish War broke out. Skobelev hastened to the seat of war, and was one of the first to cross the Danube, which he accomplished on horseback. He held no command at first, but as a leader of forlorn hopes and volunteer for every dangerous and difficult service he was one of the most conspicuous figures in the army. In the second attack on Plevna he led three regiments, and, after holding the captured position twenty-four hours, fell back for lack of support with a loss of nearly three fourths of his detachment. He was afterward placed in command of his famous Sixteenth Division, with the rank of lieutenant-general. He turned back the left flank of the Turkish army at the passage of the Balkans. He took the village of Shenova from Vessel Pasha, after Mirsky and Radetsky

had failed. He led the advance upon Adrianople, proceeding by forced marches, and then advanced to occupy Tchataldja. Skobelev took a watchful interest in the welfare of his men. His division was the best fed and best clothed in the Russian army, and not infrequently their general advanced money from his private means to secure their comfort. General Skobelev was a brilliant strategist, and, being always near his men in battle, could manoeuvre them more effectively than the generals who kept in the rear.

In 1880 General Skobelev was placed in command of the expedition against the Tekke-Turkomans. The impetuous hero of Plevna here showed himself more cautious than his predecessors, and through his prudence succeeded where they had failed. Before advancing upon Geok Tepe he had a railroad of considerable length constructed, and forwarded ample supplies of ammunition and provisions. With 10,000 troops he subdued the 40,000 Turkomans of the Akhal-Tekke country, his losses amounting to 937 men. He wished to advance to an oasis south of Merv, but was recalled by the Czar, who feared embroilment with Persia. A speech made by Skobelev in Paris, to the effect that a conflict was unavoidable and imminent between Russia and the German powers, caused some political anxiety in the early months of 1882.

General Skobelev was a tall, slender, active man, of intellectual features. He required unquestioning obedience to his orders. He lost no occasion for exhibiting to his soldiers his own reckless bravery. He dressed himself conspicuously in white, and rode a white horse in battle, wearing his neatest uniform, displaying his decorations, and carrying a jewel-hilted sword.

SMITH, JOHN COTTON, D.D., rector of the Church of the Ascension, New York city, died at his home, January 9, 1882. Dr. Smith came of a distinguished New England family, his father, Thomas M. Smith, having been President of Kenyon College, and his uncle, John Cotton Smith, at one time Governor of Connecticut. He was born at Andover, Mass., August 4, 1826. Graduating from Bowdoin College in 1847, he studied divinity at the Theological Seminary at Gambier, O., and in 1850 was ordained priest. In 1852 he became assistant minister at Trinity Church, Boston, where he remained nearly eight years. In 1860 he entered upon the duties of rector of the Church of the Ascension, New York, in which position he remained until his death. As the head of a wealthy congregation, Dr. Smith was engaged in many and various works of a charitable and reformatory nature. He was greatly interested in the subject of tenement-house reform, and gave much attention to mission and industrial schools, in which he was amply supported by the liberality of his congregation. Among the works carried out by members of his church were the building

of Ascension Hall and the Church of the Holy Spirit at Gambier, O., where he received his theological education, Aspinwall Hall, and the Alexandria Theological Seminary, and the Church of the Ascension at Ipswich, Mass., the charge of which latter he was accustomed to assume during his yearly vacation. As a churchman he was liberal in his views and sympathies, and did much to strengthen and foster this spirit. As a consequence, he was in sympathy with Christian work without regard to denominational limits. He was alive to the movement of modern thought, and frequently discussed scientific, literary, and social subjects and their relation to Christianity. He was an eloquent preacher and scholarly writer. Among his published writings are: "The Liturgy as a Basis of Union"; "The Charity of Truth"; "The Church's Law of Development"; "Oxford Essays and Reviews"; "The Homeric Age"; "The Principles of Patriotism"; "The United States a Nation"; and, "Evolution and a Personal Creator." He was the editor for some years of "Church and State," a paper started as the representative of the liberal branch of the Church. Dr. Smith was personally greatly esteemed by his congregation, and held in affectionate regard by the many poor in whose behalf he had so long labored. He leaves a wife and four daughters and two sons.

**SOUTH CAROLINA. STATE OFFICERS.**—Governor (elect), Hugh S. Thompson; Lieutenant-Governor, J. C. Sheppard; Secretary of State, J. N. Lipscomb; Comptroller-General, W. E. Stoney; Treasurer, J. P. Richardson; Attorney-General, O. Richardson Miles; Superintendent of Education, A. Coward; Adjutant and Inspector-General, A. M. Massigault; Commissioner of Agriculture, A. P. Butler; Railroad Commissioners, M. L. Bonham, T. B. Jeter, L. J. Walker. United States Senators, Wade Hampton, M. C. Butler. Members of Forty-seventh Congress, D. Wyatt Aiken, J. S. Richardson, J. H. Evins, E. W. M. Mackay, Robert Small (colored). Members-elect of Forty-eighth Congress—First District, Samuel Dibble; Second District, George D. Tillman; Third District, D. Wyatt Aiken; Fourth District, John H. Evins; Fifth District, J. J. Hemphill; Sixth District, G. W. Dargan; Seventh District, E. W. M. Mackay.

**FINANCIAL CONDITION, ETC.**—On retiring from office at the close of the year, Governor Johnson Hagood concluded his message to the Legislature by the following cheering statement as to the condition of the State: "The exhibit before you of the affairs of the State is that of a well-ordered, smooth-working, and economic government, and of a happy and prosperous people." The report of the Comptroller-General for the fiscal year ending October 31st seems to justify Governor Hagood's utterance. According to that report, the total bonded debt of the State is \$6,571,825.43, made up as follows:

Consols (valid).....	\$5,429,928 54
Deficiency bonds.....	501,992 24
State scrip, Agricultural College.....	191,800 00
To be funded for <i>ante-bellum</i> principal and interest.....	168,924 47
To be funded for <i>post-bellum</i> principal and interest.....	173,512 50
To be funded for "fundable interest".....	108,289 68
To be funded for bills of the Bank of the State.....	875 00

Total..... \$6,571,825 43

The annual interest on the above is as follows:

On funded debt (\$6,123,720.78) at 6 per cent....	\$367,423 25
On debt not yet funded (\$448,104.65) at 6 per cent	26,886 28
Back interest on deficiencies, 1879-1881.....	200 00

Total..... \$394,509 53

To pay this interest a tax is authorized of three and one tenth mills. The total value of the real property in the State is \$85,384,863; of the personal property, \$45,180,179; and of the railroad property, \$14,877,250, making an aggregate of \$145,442,292.

The revenues of the State for current expenditures are derived from the net earnings of the Penitentiary, which amounted this year to \$40,000; from the royalty on the produce of the phosphate-mines, amounting to \$138,254; and from a general tax of one half of a mill on the dollar of taxable values. This last-named tax and the tax for interest on the public debt make the total general tax amount to three and six-tenths mills.

As the interest upon the State debt is payable before the general tax is fully collected, the Legislature has authorized in each of the past two years a temporary loan in anticipation of the taxes. While this is readily effected at small expense when the money market is easy, a time might come in which it would be more difficult or impracticable. To insure the maintenance of the public credit at all times, Governor Hagood made the following recommendation to the Legislature:

The debt will soon mature, and to refund it at a more favorable rate of interest is an end to be kept steadily in view. A failure to meet promptly the interest under any circumstances would injuriously affect this purpose. Again, our taxes are paid semi-annually, and the first payment is optional, the taxpayer being charged interest if he defers payment of his whole tax till the time of the second payment. Under these circumstances, to return to a collection of the taxes for interest before the interest is due, it is necessary to make the first semi-annual payment of taxes compulsory, and then for one year to increase the tax levy sufficiently to raise the sum for which, in the experience of the Treasury, it has been found necessary to make over-drafts upon the banks. We are experiencing a period of exceptional prosperity, and there will be no better time to accomplish this desirable end. If the measure commends itself to your honorable body, the additional sum to be raised this year will be about \$100,000, and will necessitate the addition of  $\frac{3}{8}$  mill to the  $3\frac{1}{8}$  mills previously estimated. The whole tax levy will then be  $4\frac{1}{8}$  mills. The levy for last year was  $4\frac{3}{4}$  mills. It will still be necessary for one year longer to authorize the temporary loan, because the first payment of interest for 1884 will occur before any part of the tax you now authorize is collected, and will have to be met out of funds now in the Treasury, which are not sufficient for the purpose, and at the same time to carry on the government until the taxes of 1883 are collected.

After meeting all the demands of the fiscal year, there is a cash balance in the Treasury, available for the ensuing year's expenses, of \$98,017.47. The estimated annual expenses of the government, including those of the Legislature, amount to \$305,460, which, with the interest on the debt, \$394,509.53, makes the total amount to \$699,969.53.

Speaking of the indebtedness of South Carolina, Fisk and Hatch say:

The interest on the State debt is promptly and regularly paid every January and July on the consols either at the State Treasury or in New York, and on the "deficiencies" at the State Treasury. . . . The present government seem to be in earnest in their intention to keep faith with the public creditors. The taxes are honestly levied and carefully collected. The revenue is kept at a point where all claims can be undoubtedly met, and the affairs of the State are economically administered.

**EDUCATIONAL.**—During the year there has been a marked increase in the number of schools, in the number of teachers employed, in the school attendance, and in the school fund. The number of schools is 3,183; of teachers employed, 3,413, of whom 1,287 were colored; of school attendance, 65,399 white, and 80,575 colored. The exact amount of the school fund for 1882 has not been ascertained, as full reports of the school taxes collected during the fiscal year have not been made to the Comptroller-General; but sufficient is known to warrant the conclusion that the fund is considerably in excess of that reported last year, which amounted to \$452,965.44. The average length of the school session throughout the State has been four and one half months. The school law of 1878 created a State Board of Examiners, consisting of the State Superintendent of Education and four persons appointed by the Governor, by and with the advice and consent of the Senate, who constitute an advisory body, with power to review all decisions of the county boards, to adopt rules for the government of public schools, to prescribe rules for the examination of teachers, to prescribe and enforce the course of study, and to appoint in each county two persons who, with the County School Commissioners, shall constitute the Board of Examiners of the several counties of the State. Marked improvement is observable in the character and attainments of the teachers, owing to the good effects produced by the State Normal Institutes—one for white and one for colored teachers—maintained in part by State appropriations and in part by the trustees of the Peabody fund. By constitutional provision it is made the duty of the Boards of County Commissioners of the several counties to levy and collect an annual tax of not less than two mills on the dollar of all the taxable property in their respective counties for the support of the public schools. The proceeds of this tax and of the poll-tax constitute the school fund. Since the adoption of this amendment of the Constitution the school-tax has steadily increased every year, owing in great measure to

the increasing wealth and prosperity of the State, and partly to a more rigid and honest collection of the poll-tax. The opportunities now offered for higher education in South Carolina are greater than at any time in her past history. The South Carolina College and the State Military Academy have been placed, by liberal appropriations by the General Assembly, upon a broad and liberal basis, and a large number of students are now in attendance at both institutions. The branch of the university, known as the South Carolina College, situated at Columbia, is endowed with the portion of the fund donated by Congress which is set apart for the benefit of white students. It was reorganized in the spring of this year by the establishment of five additional professorships, making ten in all, and one of which is agriculture and horticulture. It opened with one hundred and forty-eight students in attendance. Governor Hagood made the following suggestions in his last message to the Legislature in regard to the course of instruction to be pursued:

The development hereafter to be given to this institution should, in order to meet the just expectations and demands of the age and the requirements of the Act of Congress, to which it owes all of its permanent endowment, be largely in the direction of applied science. It should be made the home of the practical arts and sciences as well as of the classics. It should be able to send forth the youth of the State well equipped for the practical pursuits and avocations of life, and hence technical training should be as anxiously provided for as liberal culture.

The agricultural department should be so developed as to materially aid in building up the agricultural interests of the State. Not only should the opportunity be given to the rising generation of farmers to acquire the scientific principles upon which their calling is based, but the farmers themselves should have the benefit of the experiments and tests of a well-conducted experimental farm located in their midst.

The Military Academy, which, previous to the war, was second only in thoroughness of instruction to that at West Point, and whose active operations were interrupted in 1865 by the Federal Government taking possession of its building, known as the Citadel, was reopened on the 2d of October, the building having been restored to the State in March. There are 177 cadets in attendance, of whom 68—two from each county—are maintained by the State as beneficiaries, and are required for two years after their graduation to teach in the public schools of the county from which they receive their appointment. They are taught, clothed, subsisted, and supplied with the necessary academic appliances free of charge. The other students pay \$300 per annum, which is the estimated cost of the institution of each cadet. The Academy has been made by law a branch of the university. In addition to these State institutions, there are also in active operation the College of Charleston, Furman university at Greenville, Erskine College at Due West, Wofford College at Spartanburg, Newberry College at Newberry, and Adger College at Walhalla.

Clafin College, also a branch of the university, at Orangeburg, is set apart for the benefit of colored students. It is endowed with a portion of the fund donated by Congress for the promotion of agriculture and the mechanic arts, with small aid to its normal school from the Peabody fund. There have been 344 students in attendance, of whom 24 were in the Collegiate Department, 136 in the Normal School, and 184 in the Grammar School. The Normal School is probably doing the most important work. Both graduates and under-graduates find ready employment in the public schools for colored children in the State. An agricultural farm of 150 acres is attached to the institution, and is profitably worked, chiefly by students' labor, under the instruction of a superintendent.

During this year the trustees of the Peabody fund appropriated to South Carolina \$5,375, of which \$3,225 were devoted to the education of teachers, and \$2,150 to the public schools. The total number of persons in the State between the ages of six and sixteen years is as follows:

	Whites.	Colored.	Total.
Male.....	51,440	90,897	142,337
Female.....	49,749	89,573	139,322
Total.....	101,189	180,475	281,664

**THE LUNATIC ASYLUM.**—In scientific treatment, and in all that promotes the comfort and well-being of its afflicted inmates, the Lunatic Asylum of South Carolina compares favorably with those of other States. The Legislature and people regard this benignant charity as one which patriotism, philanthropy, and Christianity demand that they should support liberally; and, having intrusted the management and immediate control to a wise and capable board of regents and superintendent, they freely give those officers the necessary means to maintain the patients in comfort, and at the same time to make such repairs, improvements, and additions to the buildings and grounds as the condition of the institution and the increasing number of those asking admission may require. The number of patients under treatment during the year was seven hundred and fifty-five, who, with the exception of very few who are supported by their relatives, are maintained altogether by the State. The superintendent has successfully adopted, to a greater extent than in other asylums, the policy of "release on probation." He believes that it is beneficial to certain classes of patients—such as those who, after considerable progress to restoration, cease to improve; some cases of melancholia, not suicidal, which, after several months' residence, instead of being benefited, are still more depressed by the surroundings of the asylum; the large class whose constant fretting to go home counteracts all other influences; and those whose physical condition would probably be benefited by the change. The policy has also proved advantageous as affording means

to determine whether restoration to reason has been really established, or whether it is merely the intermission of recurrent insanity. During the year ninety-three patients of the above classes were sent home, of whom thirty-five have been discharged as cured, thirteen as improved, six as unimproved, yet able to be cared for at home, six have died, eighteen recently released are at home, and sixteen have returned. Of the present inmates, 54 are regarded as curable, 87 doubtful, and 409 incurable. The receipts of the asylum for the year—of which the State contributed \$114,315.92—were \$119,868.63, and the expenses, including repairs, improvements, and extension of grounds, \$119,466.20. The per capita cost of maintenance is \$140. There is a farm attached to the asylum, the chief advantage of which is that it affords healthful employment to the patients, but it is also a source of material profit. Of the 550 patients now present, 330 are white and 220 colored. Of the sixty increase during the year, twenty-seven were white and thirty-three colored; and a comparison of this report with those of previous years, shows that the proportion of the colored to the white insane is steadily increasing.

**THE INSTITUTION FOR THE DEAF AND DUMB AND THE BLIND.**—This institution for the education of the unfortunate youth of the State is located at Cedar Springs, in Spartanburg County. During the year sixty-two pupils have been in attendance. Steps have been taken to provide for the colored deaf and dumb and blind children.

**THE PENITENTIARY.**—On November 1st there were 824 convicts in the Penitentiary, of whom 778 were colored and 46 white. Of these, 224 were leased to the phosphate-mining companies, 121 to the railroads, 25 were employed on the farm, and 454 kept within the walls of the prison. Of those in prison, 97 were employed making shoes, 120 on the Columbia Canal, and the remainder at various minor industries. The report of the superintendent exhibits the following figures: Balance on hand at the beginning of the fiscal year, \$21,199; earnings for the year, \$94,236; expenses proper of the Penitentiary, \$50,989; per diem and mileage of Board of Directors, \$1,267; paid on canal, \$8,096; paid into the treasury, \$40,000; and remaining in hands of superintendent, \$14,901. In the period from 1863 to 1876, besides the earnings of the convicts, it required an average annual appropriation of \$62,800 from the State Treasury to support the institution. The convicts, under the present system—both those within and without the prison—are well fed and clothed, properly cared for generally, and their sentences of penal servitude humanely executed.

**THE DEPARTMENT OF AGRICULTURE** has only been established for two years, but, under earnest and judicious management, its great usefulness is already manifest. This department of the State government is maintained

by the proceeds of a tax of twenty-five cents per ton on the sale of commercial fertilizers in the State, which realized this year \$23,704. It is charged with the inspection and supervision of the sale of fertilizers; with the duties of a Fish Commission; with the management of the State's interest in the phosphate-mines; with the development of the agricultural and mechanical interests of the State, and with the promotion of immigration. The following are the general results of agricultural operations in South Carolina in 1882: There were planted in corn 1,356,305 acres, which yielded 17,045,735 bushels, or 12½ per acre. The increase in yield over that of 1881 was 110 per cent. The area in oats was 362,373 acres, against 258,343 acres in 1881—an increase of 40 per cent. The yield was 7,929,970 bushels, or an average of nearly 22 bushels per acre—an increase as compared with 1881 of 170 per cent. The yield of wheat increased 97 per cent over that of the previous year, averaging 9½ bushels per acre. The increase in acreage was 20 per cent, or 34,846 acres. The yield of sugar-cane increased 146 per cent. The average product was 127 gallons of sirup per acre. The increase in the yield of sweet-potatoes was 80 per cent; average production 95 bushels per acre. The acreage in cotton decreased 3 per cent as compared with 1881, yet the yield increased 114,500 bales of 500 pounds each; an increase of 26 per cent. The average product was 198 pounds of lint-cotton per acre. The money value of the crops of South Carolina in 1882 exceeded that of 1881 by \$18,572,525. In addition to the increase in other farm products, the record for the year shows an increase of the crops of 1882 over those of the preceding year of 28,193,277 pounds of rice; 198,677 gallons of sorghum-molasses; 181,838 bushels of Irish potatoes; \$42,243 in sales of garden produce; 49,787 pounds of honey; 324,056 pounds of butter; 58,522 head of poultry, and 179,626 dozen eggs. Twenty-five per cent of these large crops were fertilized with home-made composts, and 10 per cent less commercial manures were purchased than in 1881. The value of the *excess* of the products of 1882 over those of last year amounted to more than the entire value of the farm supplies bought in 1881. The farmers sold large quantities of grain, and kept an abundance for home consumption. The most valuable and beneficent of the products of South Carolina are the apparently inexhaustible phosphate deposits of the Charleston Basin, whose value was first discovered in 1867, and whose importance to the agricultural world it would be difficult to measure. In 1870, three years after the discovery, the shipments of phosphate rock were only 1,989 tons. In 1882 the shipments were 140,772½ tons. These phosphate deposits in the rivers, creeks, marshes, and lands on the coast of South Carolina are the most valuable property that she owns, and the royalty of \$1 per ton on the amount of

rock mined, which the mining companies pay into the Treasury, constitutes about one fourth of the entire revenue of the State. All mining operations are conducted under charters, grants, permits, or licenses from the State, and the two systems prevailing are known as "exclusive" and "general" rights. By exclusive right is meant such territory as the State, by legislative enactment, has granted to companies or individuals to be worked exclusively by the grantees. General rights permit holders to work in any streams not controlled by exclusive-right grants. The former are far the most valuable, because they are permanent. The State's royalty from exclusive rights amounted this year to \$125,956 out of \$138,254, and of this sum one company—the Coosaw—paid \$111,071. Since 1870 the State has received from this source \$948,852. In the absence of an accurate survey by competent scientific men, there is a contrariety of opinion as to the extent of the phosphate territory, and how long the material will last. One opinion is that the phosphate underlies 250,000 acres of land, and is practically inexhaustible; and others think that the phosphatic deposits of merchantable quality and accessible position would not exceed 5,000,000 tons. They constitute the most available material now known as a basis for fertilizers. Analysis shows that they contain from 25 to 28 per cent of phosphoric acid, equivalent to 55 or 60 per cent of bone phosphate of lime. The mining companies, of which there are thirty-six, and the individuals engaged in this industry give employment to 2,500 persons, who receive annually at least \$500,000. In addition to this, very large amounts are invested in the manufacture and manipulation of these phosphates by the Charleston fertilizer companies, of which there are twenty, the most prominent being the Etiwan, Ashley, Waudo, Stono, Pacific, Atlantic, Achepoo, and Port Royal Companies, who sold during the year 75,000 tons of fertilizers, or more than double what they sold four years past. The discovery of these deposits has added nearly \$1,000,000 to the receipts of the State Treasury; brought \$18,000,000 into the State, as capital invested in this industry; built up the port of Charleston; furnished freight and business for the railroads, and made an actual cash reduction of 25 per cent in the general tax levy; besides which it has indirectly benefited the entire country, and restored the fertility of thousands on thousands of acres of exhausted land in many other States as well as in South Carolina. Nature, capital, labor, and genius combined to make this wealth—more valuable than gold-beds or diamond-fields—useful and beneficial to the world.

South Carolina ranks as the twentieth in the list of fish-producing States, with 1,005 fishermen, and products valued at \$212,482. Her shrimp-fisheries are more extensive than those of any other State, and nearly as great as those of all other States combined. During the year

the Fish Commission has distributed 166,000 California salmon, 945,000 shad, 4,545 German carp, 58 blue bream, and 50 black bass.

**MANUFACTURES.**—The water-power of South Carolina has been estimated at 3,000,000 horsepower, of which it is said only 15,000 horsepower is now used by all kinds of mills in the State, leaving a very large margin for future development. The cotton-mills in the State contain now 180,701 spindles and 4,120 looms, paid in wages during the year \$728,900 to 4,262 hands, and have a capital of \$4,547,000. This does not include the Pendleton Factory; the Charleston Manufacturing, which began operations at the end of the year; or the Pelzer Mills, which suspended for repairs and enlargement. The stock of all these factories, except five, is above par, and the stock of these five is at par. The Langley stock is quoted at \$173, the Graniteville at \$170, the Piedmont at \$150, the Ready River, Clifton, and Camperdown at \$125, the Farryville and Pelham at \$120, and the Cedar Shoals and Valley Falls at \$110. The dividends paid range from 10 to 20 per cent. The State has wisely supplemented the natural inducements she offers to capitalists in her water-power and her products, by legislation which exempts capital invested in factories from all taxation, except the two-mill school-tax, for ten years. An effort was made at this year's session of the Legislature to repeal this law, but it was overwhelmingly defeated. The same Legislature granted charters to nine new factories, with an aggregate capital of \$1,725,000.

The financial condition of the city of Charleston is much improved, and may now be said to be perfectly sound. At the beginning of this year its debt amounted to \$4,264,050, being \$1,000,000 less than it was ten years ago, and \$500,000 less than it was in 1881. The interest on the debt amounts to \$183,474. In 1870 it amounted to \$314,557. This reduction of principal and interest was not effected by scaling or readjusting, but by paying the principal and by refunding the matured debt in long-date non-taxable bonds bearing a low rate of interest. In 1881 the debt was \$95 for every man, woman, and child in Charleston. Now it is \$85. The Legislature wisely repealed the power heretofore exercised by the city, to borrow money and contract debts; and now the municipal government is absolutely prohibited from contracting any debt in excess of the income of the current year, unless the debt to be incurred shall be approved first by a vote of two thirds of the City Council; second, by two thirds of the voters of Charleston at a special election; and, third, by the General Assembly of the State. The trade of Charleston, for the commercial year ending August 31st, was largely in advance of that of the preceding year. The value of the trade of the year was \$74,839,904, against \$71,211,000 last year. In naval stores the receipts of spirits of turpentine increased from 51,386 casks to 65,000 casks; the receipts of rosin from 281,417 barrels to

256,000 barrels; lumber from 18,610,857 feet to 45,000,000 feet.

The State Legislature was convened in extra session on June 27th for the purpose of dividing the State into seven congressional districts, instead of five, so as to provide for the two additional members of Congress to which the State became entitled under the last apportionment act.

The full text of the redistricting law is as follows:

An Act to divide the State of South Carolina into Seven Congressional Districts.

*SECTION 1. Be it enacted by the Senate and House of Representatives of the State of South Carolina, now met and sitting in General Assembly, and by the authority of the same:*

That the State of South Carolina shall be divided into seven congressional districts, as follows: The First Congressional District to be composed of the county of Charleston, except James Island, Folly Island, Morris Island and the islands lying between them, the lower harbor of Charleston Harbor and the ocean coast-line from and below high-water mark; the towns of Mount Pleasant and Somerville, and so much of the parish of St. James Goosecreek as lies between the western track of the South Carolina Railway and the Ashley River, in the county of Berkeley, and below the county of Colleton; the townships of Bell's, Burns, Carn, Dorchester, George, Givham, Heyward, Koger, Sheridan, and Verdier, in the county of Colleton; the townships of Branchville, Caw-caw, Cowcastle, Edisto, Elizabeth, Goodland, Hebron, Liberty, Middle, Newhope, Union, Willow, Rocky Grove, and Zion, in the county of Orangeburg; and the county of Lexington.

The Second Congressional District to be composed of the county of Hampton; the townships of Broxton's and Warren in the county of Colleton, the county of Barnwell, and the counties of Aiken and Edgefield.

The Third Congressional District to be composed of the counties of Abbeville, Newberry, Anderson, Oconee, and Pickens.

The Fourth Congressional District to be composed of the counties of Greenville and Laurens, the county of Spartanburg, except the townships of White Plains and Limestone Springs; the county of Union, except the townships of Gowdeysville and Draytonville, and the townships of Centre, Columbia, and Upper, in the county of Richland, and the county of Fairfield.

The Fifth Congressional District to be composed of the county of York, the county of Chester, the townships of White Plains and Limestone Springs, in the county of Spartanburg; the townships of Gowdeysville and Draytonville, in the county of Union, and the counties of Lancaster, Chesterfield, and Kershaw.

The Sixth Congressional District to be composed of the county of Clarendon, the townships of Lake, Lee's, Johnson's, and Sumter, and the town of Kingstree, in the county of Williamsburg, and the counties of Darlington, Marlboro', Marion, and Horry.

The Seventh Congressional District to be composed of the counties of Georgetown and Beaufort, the lower township of the county of Richland, the county of Sumter, the townships of Amelia, Goodby's, Lyons, Pine Grove, Poplar, Providence, and Vance's, in the county of Orangeburg; the townships of Anderson, Hope, Indian, Kings (except the town of Kingstree), Laws, Mingo, Penn, Ridge, Sutton's, and Turkey, in the county of Williamsburg; and all of the counties of Charleston and Berkeley, excepting such portion thereof as are hereinbefore designated as a part of the First Congressional District; the townships of Collins, Adam's Run, Glover, Fraser, Lowndes, and Blake, in Colleton County.

SEC. 2. In every case in which, under the provisions of this act, the townships or parts of townships of any county may not all be in the same congressional district, it shall be the duty of the proper board of county canvassers of such county in canvassing the votes of said county to report separately the result of the vote of such township or parts of townships for the congressional district to which they may respectively belong.

SEC. 3. In any case in which a voting precinct may form part of more than one congressional district, if no other provision be made by law, the commissioners of election for the county in which such precinct is situated shall provide for such precinct separate boxes for every congressional district within which the said precinct may be, and each voter at such precinct shall deposit his ballot for member of Congress in the box provided for the congressional district within the limits of which said voter may reside.

SEC. 4. That all acts and parts of acts inconsistent herewith are hereby repealed.

SEC. 5. That this act shall take effect immediately on its approval.

Approved July 5, A. D. 1882.

A statement from the Census-Office gives the following summary of white and colored voters in the new congressional districts:

DISTRICTS.	White.	Colored.	White majority.	Colored majority.
First District.....	12,445	18,884	...	1,439
Second District.....	11,446	16,283	...	4,837
Third District.....	13,359	12,707	652	....
Fourth District.....	17,670	16,985	685	....
Fifth District.....	11,805	12,669	...	864
Sixth District.....	12,480	13,468	...	988
Seventh District.....	7,695	82,598	...	25,198

Acts were passed amending the election law and the law defining the election precincts, and joint resolutions proposing to amend the Constitution relating to the time of holding elections, and relating to the formation of new counties were adopted. The former constitutional amendment proposes that "the general election for Senators and Representatives shall be held in every second year, in such manner, at such time, and at such places as the Legislature may provide"; and the latter, as to new counties, proposes to strike out in section 3, Article II. of the Constitution the words "but no new county shall be hereafter formed of less extent than six hundred and twenty-five square miles, nor shall any existing counties be reduced to a less extent than six hundred and twenty-five square miles," and insert in lieu thereof the following: "Provided that no new county shall be formed which has a population of less than one one-hundred and twenty-fourth part of the whole number of inhabitants of the State, and an area less than four hundred square miles, nor shall any existing counties be reduced to a less area than four hundred square miles." The extra session of the Legislature ended on July 5th. Its total expenses were \$15,409.40.

The Democratic Convention met at Columbia, on August 1st, to nominate candidates for Governor, Lieutenant-Governor, and other State officers. Prior to the meeting it was generally believed that the choice for Governor would be either General Bratton or

General J. D. Kennedy; but after the first ballot, the names of both those gentlemen having been withdrawn, Hugh S. Thompson was nominated by acclamation. He was not a candidate, and was not prominent in party politics. His service to the State for several years had been in the cause of education, having served, with great distinction and success, six years as Superintendent of Education, and it was determined that he should be elected President of the State University, made vacant by the resignation of the Hon. W. Porcher Miles.

The Greenback - Republican - Independent Convention met at Columbia September 5th, and nominated a full ticket for State officers, J. Hendricks McLane being the candidate for Governor.

The combined opposition made strenuous efforts to defeat the Democratic candidates, and much money was spent, but the campaign resulted in the election of the entire Democratic ticket, and of six out of the seven members of Congress. Under a rigid execution of the election laws peace reigned throughout the State on election-day.

The General Assembly met again in regular session at Columbia on November 28th. On December 5th Governor Thompson took the oath of office and delivered his inaugural address. The most important measure of the session was the act to regulate railroads, providing for the appointment of three commissioners; making it unlawful for any railroad company doing business in South Carolina to charge more than "a reasonable compensation for the transportation of passengers or freight of any description"; prohibiting any unjust discrimination in freight or passenger rates; forbidding the charge of greater toll for transportation for a short than is charged for a long distance, and forbidding all rebates or drawbacks, or lesser rates to favored individuals than are charged to the public. An act to amend the usury law was also passed, providing that no greater rate of interest than seven per cent annum shall be charged upon any contracts arising in the State, except on written contracts wherein by express agreement as high a rate as ten per cent may be charged. An act was passed compelling those who are sent to the Lunatic Asylum, and who are able to do so, to pay their own expenses. Another important act was that providing for "the more speedy development of the Columbia Canal," by which \$15,000 and the labor of at least two hundred convicts—equivalent to \$21,900 more—were given for the construction of this work. Another measure of public interest was the act to exempt certain counties in the State from the operations of the general stock law, which requires owners of stock of all kinds to keep them fenced in. As this act requires the counties seeking exemption to pay for the fences which are to separate them from the counties where the law is in force, by a tax

levy on the assessed value of all the stock in those counties, and as the total value of all the stock would not pay the cost of the fences, the law will either be inoperative or it will amount to a confiscation of the property of those who are supposed to need relief from the stock law. The act making appropriations to meet the expenses of the government and pay the interest on the public debt provided for an appropriation of \$765,614.22. After a session of twenty-one working days the Legislature adjourned on December 23d.

SPAIN, a monarchy of Southern Europe. The Constitution of June 30, 1876, vests the legislative powers in the King and the Cortes. The Cortes consist of two Houses, the Senate and the Congress, each possessing the same powers. The Senate is composed of three classes of Senators: Senators by right, to wit, princes of the blood, grandees of Spain, and the chief functionaries of the state, army, and Church; Senators nominated by the crown for life, who, with the Senators in their own right, must not exceed 180 in number; and Senators elected by public corporations and citizens paying the highest rate of taxes, who must not exceed the same maximum number. The Congress, or Chamber of Deputies, is composed of members elected for five years by electoral colleges, in the ratio of one Deputy to every 50,000 inhabitants. The clergy are ineligible. Deputies accepting an office, pension, or decoration, must resign—a regulation which does not apply to Ministers. The Cortes meet annually. The King as well as each Chamber possesses the right of initiative, but financial measures must be first submitted to the Lower House. Ministers are impeachable by the Chamber of Deputies, and triable by the Senate. Each province has its local Assembly. The Roman Catholic is the religion of the state, but all other faiths are tolerated. By the royal decree of August 8, 1878, the Island of Cuba can send deputies to the Cortes in the proportion of one to every 40,000 free inhabitants.

Alfonso XII, the King of Spain, is the son of Queen Isabella and the Infante Francisco. He was born in 1857, and proclaimed king December 31, 1874. The heir-apparent is the Infanta Maria de las Mercedes, born September 11, 1880, the offspring of the King's second marriage, in 1879, with Maria Christina, Archduchess of Austria.

The Ministry is composed of the following members: President of the Council, Pedro Manuel Sagasta, appointed February 8, 1881; Minister of Foreign Affairs, A. Aguilar, Marquis de la Vega de Armijo; Minister of Justice, Alfonso Martinez; Minister of Marine, Admiral F. de Pavia y Pavia; Minister of Finance, Tomaro F. Comacho; Minister of War, General A. Martinez de Campos; Minister of the Interior, Victor Gonzalez; Minister of Commerce and Agriculture, S. L. Albareda; Minister of the Colonies, F. de Leon y Castillo.

AREA AND POPULATION.—The area of the kingdom, including the Balearic and Canary Islands and a small district in Africa opposite Gibraltar, is about 195,000 square miles. The total population of the forty-nine provinces, according to the census of December 31, 1877, was 16,625,860, comprising 8,134,659 males and 8,491,201 females. There were only 26,834 resident foreigners. The increase of population has not been over 75 per cent in the last hundred years. In the seventeen years preceding 1877 it was at the rate of  $\frac{1}{4}$  per cent per annum. The density of population is 90 per square mile, about half that of France. Nearly 46 per cent of the surface is uncultivated.

The following cities contained in 1877 over 50,000 inhabitants: Madrid, 397,690; Barcelona, 249,106; Valencia, 143,856; Seville, 133,938; Malaga, 115,882; Murcia, 91,805; Saragossa, 84,575; Granada, 76,108; Carthage, 75,908; Cadiz, 65,028; Jerez, 64,533; Palma, 58,224; Lora, 52,206; Valladolid, 52,206; Cordova, 49,855.

COMMERCE.—The total amount of the foreign commerce of Spain, for the last three years reported, was as follows, in pesetas, or francs:

YEAR.	Imports.	Exports.
1877.....	533,357,949	515,926,135
1876.....	533,652,237	445,332,544
1875.....	570,297,467	452,021,575

The commercial intercourse with the principal foreign countries is shown in the following table, giving the exports and imports in millions of pesetas, or francs, and tenths of millions, for the last two years reported:

COUNTRIES.	IMPORTS.		EXPORTS.	
	1875.	1876.	1875.	1876.
Great Britain.....	194.7	143.5	156.4	178.8
France.....	149.9	163.6	73.6	90.9
United States.....	60.7	59.7	15.5	12.0
Portugal.....	4.5	4.4	40.1	19.8
Belgium.....	15.6	17.7	5.3	8.8
Sweden and Norway...	17.0	16.0	2.0	3.6
Italy.....	9.2	16.3	3.8	4.5
Algeria.....	6.9	10.3	6.1	8.1

The total imports of 1881 amounted to about 576,000,000 pesetas. The imports of wines and liquors in 1881 were valued at 45,000,000 pesetas; of tropical produce, 45,700,000; animal food products, 29,500,000; total articles of consumption, 130,300,000; the exports of wines and liquors at 268,500,000, of fruits, etc. (oranges, raisins, nuts), 49,400,000; cereals, 24,800,000; total articles of consumption, 359,700,000. The imports of textile materials amounted to 93,800,000 pesetas; wood (cork), 34,200,000, coal 22,900,000, hides and leather 17,200,000, raw metals 16,300,000, total raw materials 187,000,000; the exports of raw metals (lead and copper) to 84,900,000, minerals (pyrites) 76,000,000, total raw materials 180,000,000. The imports of manufactures amounted to 143,000,000 pesetas, in which total tex-

tile manufactures are represented by 60,500,000 pesetas, machines, vessels, etc., by 34,500,000, yarns by 21,700,000, and metallic articles by 12,700,000. The exports of manufactured articles consisted of corks of the value of 14,500,000 pesetas, and playing-cards of the value of 3,100,000 pesetas.

The merchant marine consisted on January 1, 1881, of 2,236 vessels, weighing 560,125 tons, of which 347, of 233,686 tons, were steamers.

There were about 3,875 miles of railroad in operation in 1878.

The length of the state telegraph lines in 1880 was 10,075 miles. The number of dispatches in 1880 was 2,222,429, of which 1,397,451 were domestic, 508,417 international, and 316,561 official. The receipts were about \$800,000, the expenses \$1,190,000.

The number of post-offices in 1880 was 2,586; number of letters carried 81,422,000, postal cards 1,045,000, circulars, etc., 5,703,000, newspapers 40,247,000; total, 128,417,000. The receipts were 9,407,954 francs, expenses 7,599,820 francs.

**COLONIES.**—The area of the colonies of Spain and their population in 1877 were as follow:

COLONIES.	Square miles.	Population.
Cuba .....	43,220	1,394,516
Porto Rico .....	3,550	646,862
Total, America .....	46,770	2,040,378
Philippine Islands .....	65,100	4,319,269
Caroline Islands and Palaoa .....	905	28,000
Marian Islands .....	420	5,610
Total, Asia .....	66,425	4,352,879
Fernando Po and Annobon .....	483	5,590
Total colonies .....	113,678	6,399,347

The population of Cuba consisted of 764,164 whites, 344,050 free negroes, 227,902 slaves, and 58,400 Chinese. The number of slaves decreased by 136,000 between 1870 and 1877. A bill for the abolition of slavery in Porto Rico was passed in 1873. The bill for the gradual extinction of slavery in Cuba, introduced in the Cortes in November, 1879, provides that all slaves over fifty-five years old should become free forthwith; that slaves from fifty to fifty-five years old should be liberated September 17, 1880; from forty-five to fifty, in September, 1882; from forty to forty-five, in 1884; from thirty-five to forty, in 1886; from thirty to thirty-five, in 1888; and all the rest in 1890. After 1880 the sum of 100,000 piasters is annually reserved in the Cuban budget to pay an indemnity of 350 piasters for each slave emancipated. The population of Cuba in 1879 was 1,424,649; of Porto Rico in 1880, 754,313. The population of Havana in 1873 was about 230,000; of the city of Porto Rico, in 1860, 18,132; of Manila, 270,000.

The exports of Cuba amounted to \$76,235,726 in 1876, \$66,836,204 in 1877, and \$70,881,525 in 1878. The chief article of export is sugar, from 90 to 91½ per cent of which is sent

to the United States. The quantity exported in 1879 was 1,698,392,000 pounds, as compared with 1,265,195,000 pounds in 1878, 1,242,793,000 in 1877, 1,487,808,000 in 1876, 1,864,991,000 in 1875, and 1,925,400,000 in 1870. Besides sugar there were exported from Havana in 1880 9,873 pipes of rum, 12,433 barrels of molasses, considerable quantities of honey and wax, a small quantity of coffee, 12,464,936 pounds of tobacco, and 153,141 thousands of cigars. The number of vessels arriving at the port of Havana in 1880 was 1,426, of 1,020,181 tons, against 1,752, of 1,103,439 tons, in 1879, and 1,626, of 979,946 tons, in 1878. Of the arrivals in 1880, 663, of 493,550 tons, were American ships; 491, of 291,481 tons, Spanish; 151, of 120,130 tons, English; 33, of 56,389 tons, French; and the rest principally German and Norwegian. There were about 860 miles of railroads in operation on the Island of Cuba in 1880, and 2,800 miles of telegraph lines.

The expenditures of Porto Rico are estimated for the year 1879-'80 at \$3,506,500. The value of the merchandise exported in 1878 was \$10,422,400. There were exported 1,659,519 quintals of sugar, 4,922,707 gallons of molasses, 171,885 quintals of coffee, 51,346 quintals of tobacco, 150 quintals of cotton, 6,477 quintals of hides, and 38,247 gallons of rum.

The value of the exports from the Philippine Islands in 1879 was 18,813,452 pesos; of the imports, 18,031,547 pesos. Sugar constitutes over 56 per cent of the exports, of which product 2,145,423 pecculs, of 135 pounds, were exported in 1879.

**ARMY.**—The Spanish army is becoming reorganized on a plan submitted to the Cortes by the King. By the law of January 8, 1882, the period of service is fixed for all arms at twelve years: three in the active army, three in the active reserve, and six in the second reserve. The period in the colonial army is eight years, four with the colors and four in the second reserve. The peninsular army is recruited by conscription and enlistment, the colonial wholly by enlistment among the men under thirty-five years of age who have served their time in the active army. Immunity from service is purchasable for 1,500 francs. Every Spaniard is otherwise obliged to enter the service. The number of reserve battalions and of depots will range from 104 to 140, corresponding to the number of battalions of the line. Each depot district has a reserve battalion formed and an active depot battalion partly filled, which receives the recruits and transfers the number needed to complete the corresponding line battalion, and which will call in the men on leave in civil employments and the active reserve in case of mobilization, and after furnishing the complement of the line and the first reserve complete itself, if necessary, to make up the second reserve army. The cavalry and artillery receive the same territorial system of

organization. By these measures an army of 400,000 instructed and easily mobilized troops is expected to develop. The effective of the standing army for 1882-'83 is fixed by the decree of July 3, 1882, at 94,810 men, with 28,000 additional during the three months of instruction. The provincial militia has been dissolved.

The effective strength of the army in Cuba was fixed at 26,579 men; of the force in Porto Rico at 3,318; of that of the Philippines at 10,035.

The civic guard, or police troops, numbered 780 officers and 14,756 men in 1882; the carbiners, or custom-house guard, on the coasts and frontiers, consisted of 92 companies and 22 mounted sections.

(For details of the Spanish navy, see NAVIES OF EUROPE.)

**FINANCES.**—The sources of revenue and heads of expenditure are set down in the budget approved for the year ending June 30, 1883, as follow, in pesetas (one peseta = one franc):

RECEIPTS.	Pesetas.
Direct taxes.....	280,979,000
Indirect taxes.....	164,409,000
Customs.....	115,458,000
Stamps and <i>regie</i> receipts.....	221,585,000
Receipts from state property.....	28,860,225
Miscellaneous.....	21,706,000
<b>Total.....</b>	<b>782,997,225</b>

Redeemable domestic loans.....	471,647,821	9,432,956
<b>Total.....</b>	<b>9,618,759,121</b>	<b>106,264,218</b>

**FOREIGN RELATIONS.**—The progress of Spain in orderly government and prosperity, and the projected reforms in the army and navy, impel her to lift her head somewhat higher in international affairs. Expansive desires are manifested in the direction of Morocco, and greater bitterness is felt at the possession of Gibraltar by Great Britain. Several occasions of jealousy and misunderstanding occurred with England during 1882, while the relations with other powers were confined to questions of the terms on which the commercial treaties are to be renewed. The occupation of the northern end of Borneo, by a company under an English charter, led to a protest, on the ground that Spain had sovereign rights over the territory, dating from 1521, and acknowledged by the Sultan of Sooloo (see BORNEO). The denial of this position by the British Government caused dissatisfaction, which grew more intense upon England's action in the Egyptian question. The Spanish Cabinet asked

The burden of the public debt was such that in 1871 the Minister of Finance declared that the kingdom was on the verge of bankruptcy. After that occurred the heavy military expenses of the civil war. The army expenditure has been less since 1878, but deficits have occurred regularly. The present Minister promised in 1881 a reform in the finances which would secure a surplus in the future. The capital of the public debt, consisting of the consolidated debt due the United States; do., transferred to the Danish Government; foreign and domestic perpetual *rentes*; bonds in favor of civil corporations and of the clergy; public improvement bonds and foreign and domestic loans, on September 1, 1881, and the interest charge of the year, were as follow, in pesetas:

leave to take part in the conference at Constantinople. All the powers gave a favorable reply except France, which avoided a direct answer, and England, which returned a positive refusal.

A difficulty arose with reference to some Cuban patriots, which placed England in the position of a suppliant. Maceo, Rodriguez, and another political prisoner, while being transferred to a penal colony, escaped from custody and took refuge in Gibraltar. The Spanish consul, being apprised by the police, informed the English authorities that these men were fugitives from justice, and requested that in order to save trouble and delay they should be expelled at a certain hour so that the police might capture them on Spanish soil. This was done by the compliant officials, who thought nothing more about it until a storm of indignation arose in England at the violation of the right of asylum. The British Government made earnest representations, which

the Spanish Minister answered with the same sort of arguments which he had been accustomed to receive from London; but when it was put in the light of a favor, the Spanish authorities finally released two of the prisoners.

A projected pilgrimage to Rome caused solicitude in the early part of the year. It was feared that it might develop into a Carlist demonstration, or into one in favor of the restoration of the temporal power of the Pope, which would cause complications with the Italian Government. Correspondence on the subject was carried on with the Quirinal and with the Vatican. The attitude of the Archbishop of Toledo, Cardinal Moreno, and of the Papal Nuncio, increased the distrust. Yet the development of the affair revealed the fact that the clergy of Spain were not disposed to identify themselves with the failing cause of Don Carlos, but rather to put their trust in the Conservative-Liberal party. The Clerical representatives in the Cortes assumed an aggressive attitude toward the Sagasta government, not only in regard to the proposed civil marriage and education laws, but on the question of the treatment by the Cabinet of the question of the temporal sovereignty of the Pope in its relations with the Italian Government.

LEGISLATION.—The projects of Comacho for the reform of the finances were approved by the Cortes before they adjourned, on December 30, 1881. The Finance Minister proposed a 4 per cent loan of 1,800,000,000 pesetas, to cover the privileged 6 per cent debt and the floating debt, and asked discretionary power to effect an arrangement with the Spanish and foreign holders for the conversion of the consolidated debt. The provisional understanding arrived at in 1876 secured to the creditors 1 per cent interest to January 1, 1882, and after that date  $1\frac{1}{2}$  per cent. Comacho's project was to convert the loans into 4 per cent bonds, scaling down the capital so as to secure the creditors 1.62½ or 1.65 per cent instead of 1.25 per cent interest on the face value of the existing bonds. He negotiated at once with the domestic creditors, and came to terms in the beginning of February on a smaller reduction. The compromise secures the bondholders  $1\frac{1}{2}$  per cent per annum on the old bonds converted into 4 per cent new bonds, but the arrangement does not go into effect until July 1, 1883. The French and Dutch bondholders agreed to the same terms, but the English refused to accept the commutation. In the interval they receive  $1\frac{1}{2}$  per cent. The foreign creditors were treated with on the same basis. This arrangement adds 43,000,000 pesetas to the annual burden of taxation. The augmentation of the army and navy, on which the King and his Government were determined, increases the amount of extra taxation to sixty or seventy millions. Comacho met with difficulties on every side in attempting to carry out his comprehensive schemes for obtaining the necessary increase in the revenue.

The main feature in the new financial policy was the reform of the tariff in the direction of free trade, which had been impending since Sagasta came into power, and was now to be applied in a sweeping manner in the new commercial treaty with France. The people of Catalonia are an excitable race, thoroughly imbued with federalistic sentiments. The tumultuous populace of Barcelona, and the other factory towns, were already embittered by the octroi regulations. The manufacturers, to provoke disturbances and coerce the Government to preserve their monopoly of the domestic woolen and cotton goods market, suddenly closed their workshops. The Conservatives, who always supported protectionist doctrines, encouraged the belief that the French treaty would take the bread out of the mouths of the working-people. The Socialists, who can muster an army of adherents among the operatives of Catalonia, and who in Spain combine the national tendency to revolutionary methods with the violent doctrines of anarchism, joined the cry, in the hope of turning the movement in a social-revolutionary direction. These various incitements produced symptoms of an insurrection in May. Mobs congregated in the streets and squares of Barcelona. They destroyed the octroi offices, and ordered stores and workshops to be closed where the proprietors had not followed the general example. Bands marched through the country, proclaiming the independence of Catalonia. The Government was prepared for the outbreak. The military force in the province was strongly reinforced. Captain-General Blanco was energetic and active. The insurgents were met by troops wherever they appeared. In two weeks order was restored, and the proclamation of martial law recalled.

The Liberal-Conservative opposition took a strong stand against the financial policy of the Ministry, so as to be ready to resume the reins of government if the Constitutional-Liberal Ministers failed in their difficult task. Orovio, Cos-Gayons, and the other former Finance Ministers, opposed the composition of the creditors, on the ground that the country could not stand the additional burden. They hoped that the popular discontent over the new taxes would impel the King to dismiss the Cabinet and recall his Conservative advisers. The Ministers, who had yielded somewhat in the matter of the taxes, insisted on carrying the French treaty without alteration. The Cortes reassembled on March 20th. The Conservatives, re-enforced by the Catalanian representatives, when the French treaty came up in the Cortes, tried to have it made terminable on one year's notice; but it was passed, by a four-fifths majority, in the Cortes, and went into force for the period of ten years, on May 15th. The arrangement for the conversion of the consolidated debt was ratified. The Government made important concessions to the protectionists in the final framing of the general tariff law,

which was passed shortly before the close of the session, on July 7th. This law provides for the gradual reduction of all duties to 15 per cent as against countries allowing equal advantages in their commercial treaties with Spain, but allows retaliatory duties to be imposed when another country raises its duties on Spanish products. All duties between 15 and 20 per cent will be reduced to 15 per cent. The excess over 15 per cent of duties above 20 per cent is divided into three parts, one part to be remitted immediately, one after the lapse of five, and one after ten years. The reductions are made discretionary with the Government. The Ministry were deterred by the protectionists from acceding to the demand of the representatives of the Antilles to have the privileges secured by the oppressive, antiquated colonial system to the flag and products of the mother-country abolished. The postponement of this reform stands in the way of the conclusion of a reciprocity treaty with the United States, which is earnestly desired by the inhabitants of Cuba and Porto Rico. The advantages in Cuba, which the shipping and the grain-growing and other agricultural interests in Spain adhere to, deter the American Congress from abating the sugar duties. The question of the wine duty in England prevents the conclusion of a satisfactory commercial treaty with Great Britain. Mr. Gladstone, who, for politico-commercial reasons, enforced by moral and sanitary arguments, secured a reduction of duty on the light wines of France, for fiscal reasons is unable to place wines of greater alcoholic strength on the same footing. The concessions which Comacho was obliged to make in the trade taxes, the octrois, and also in the patent duties, lessened the prospects for escaping the annual deficits while adding greatly to the expenditures. The reduction of the tariff is calculated to increase the revenue, by increasing imports and diminishing smuggling; but the slower the reform, the less the Treasury is benefited. After the important step taken in the French treaty the Government halted in its course, allowing the treaties with Italy, Germany, the Netherlands, Portugal, Sweden and Norway, Denmark, Greece, Russia, Turkey, and Switzerland to expire, and their commerce to come under the provisions of the general tariff, except in the case of Germany, and one or two other countries, where the treaty was prolonged until December 15th. The difficulty of the fiscal situation was enhanced by bad harvests in Andalusia and other parts of Spain. While commanding the confidence of the King in their financial policy, and thus able to resist the assaults of the Conservatives, an opposition was organized which threatens to unseat the Ministers.

**STAR-ROUTE TRIAL.** The proceedings instituted against various persons charged with fraud in the conduct of the mail service of the United States on the "Star Routes"—or lines upon which the mail can not be carried by

railroad or steamboat—were continued during the year. (For their inception, see "Annual Cyclopædia" for 1881, article UNITED STATES.) Early in January, several persons were arrested and subsequently indicted for furnishing fraudulent bonds to accompany bids for mail service, or for becoming surety on such bonds, without possessing the necessary qualifications. In February, evidence in the case of what was known as the Dorsey combination was laid before the Grand Jury of the District of Columbia by Mr. George Bliss, acting as special counsel for the Government. The alleged combination consisted of John W. Dorsey, John M. Peck, and John R. Miner, who had originally made the bids and obtained the contracts; Harvey M. Vaile, to whom, as a sub-contractor, the routes were afterward transferred; Stephen W. Dorsey, who was accused of having directed the course of the contractors, and aided them with his influence as a Senator; M. C. Rerdell, S. W. Dorsey's secretary, who was said to have been a supervising agent and manager for the combination in Washington; Thomas J. Brady, Second Assistant Postmaster-General, who had official direction and control of the star-route service; and W. H. Turner, who was a clerk in the contract office, with control of the territorial routes under Brady. Mr. J. L. Sanderson, a contractor, was also included in this first indictment. The combination had originally 134 routes, upon which the compensation for service under the contracts amounted to \$143,169. This was raised, by "increase and expedition"—that is, by increasing the number of trips to be made per week, shortening the time for each trip, and making allowances therefor—to \$622,808. On twenty-six of the routes the increase of pay had been from \$65,216 to \$530,319. Upward of eighty witnesses were examined before the Grand Jury, and a presentment was made against the accused persons on the 20th of February. Mr. W. W. Ker, of Philadelphia, was engaged by the Attorney-General to draft the indictment and otherwise assist in the prosecution of the case. The formal indictment was agreed to and brought into the Criminal Court of the District of Columbia, before Judge Wylie, on the 4th of March. It was a voluminous document, and set forth the relations of the several parties to the mail service, and the facts in regard to the management of the routes, and alleged fraud in securing increase of compensation, and conspiracy to defraud the Government on the part of the defendants. On the 9th of March, and two days following, most of the indicted persons appeared before the Court and gave bail for their appearance at the trial. The case came up for the arraignment on the 16th, but was postponed until the 25th. Motion was then made by the defense to quash the indictment, and after some argument a further postponement was had. On the 29th of March Mr. R. T. Merrick, of Washington, consented, at the request of the Attorney-General, to as-

sist in the prosecution of the case as Government counsel. Argument was begun on the motion to quash the indictment on the 31st of March, the Government being represented by District Attorney Corkhill, Mr. Bliss, Mr. Ker, and Mr. Merrick, and the defense by Messrs. Ingersoll, Totten, Wilson, Shellabarger, Chandler, and others, and five hours were allowed to each side. The chief grounds on which it was claimed that the indictment should be quashed was that the defendants had not been bound over by a commission to await the action of the Grand Jury, and that the jury had found the indictments without having the cases properly brought before them by order of the Court. The motion was denied on the 10th of April, and the Court held that the indictment was good and sufficient. The defendants being then called upon to plead, Mr. Totten stated that he wished to file a plea in abatement on behalf of Brady and Turner, on the ground that persons other than the District Attorney had free access to the Grand Jury when the indictment was under consideration, and the jury was improperly influenced. On the following day, April 11th, after hearing argument, the Court ruled that the proceedings of the Grand Jury room could not be inquired into. In closing his decision, Judge Wylie said: "The plea must be entered, or, if the defendants stand mute, the trial will proceed under the terms of the law. The only objection, that some of the parties have been indicted under their initials instead of their full Christian names, is of no consequence now, and it can form the basis of a plea in abatement hereafter. My opinion is that the Grand Jury acted improperly, but that does not affect the indictment; and I therefore decide that this plea in abatement is not allowable, and that the Court ought not to receive it." Some of the defendants refused to plead, but pleas of "Not guilty" were entered for all except S. W. Dorsey, who had failed to appear. His recognizance had been declared forfeit, and a warrant issued for his arrest. On the 19th of April he appeared in court and pleaded "Not guilty," and the order for forfeiture of his bail was set aside.

A motion on behalf of the defendants for a bill of particulars was denied on the 20th of April. Judge Wylie said it was not necessary that an overt act should plainly appear in the indictment, if the existence of the conspiracy was established. It was, however, necessary to prove that one or more of the accused had committed acts in furtherance of the conspiracy. He thought the indictment was faulty in not describing the alleged forged papers with sufficient fullness, but the question was whether there was not enough other evidence set forth to fulfill the requirements of the law. Redundancy in an indictment was not a fault, and if there was enough evidence of the commission of overt acts to secure the conviction of one of the alleged conspirators without the

admission of these papers, the indictment was good. On the 22d, the motion to quash the indictment as to Rerdell, on the ground that he had been indicted under his initials as M. C. Rerdell, instead of his full name as Montfort C. Rerdell, was granted. The Court held that all authorities were agreed, that when an indictment designated a man by initials only, without explanation, it was defective. If it had declared that the name was unknown, or that the person was ordinarily known by certain initials or abbreviations, it would have been sufficient. Rerdell was rearrested and brought before the police court on the 24th. On the preliminary trial there, which began on the 26th, ex-Attorney-General McVeagh and ex-Postmaster-General James testified that Rerdell had made a statement or confession to them, in which he said that he had been the manager for the Star Route combination in behalf of S. W. Dorsey. No bids had been made in Dorsey's name because he was then a senator, but when he left the Senate a division of the routes was made. Rerdell said that he had kept a set of books which showed that certain payments had been entered under the names of Smith and Jones, which names represented Brady and Turner. Mr. James said that Rerdell had told him that Brady received either 33 $\frac{1}{3}$  or 40 per cent of the extra compensation when increase or expedition was granted, and that one half the fines remitted had to be paid to him. Rerdell was further said to have declared that when the congressional investigation was made, and a call for the books was anticipated, a complete new set had been made by him to prevent the discovery of these payments. It was said that Dorsey regained his influence over Rerdell, and induced him to retract the so-called confession.

The time set for the trial was May 4th, but on that day further motions to quash the indictment were made in behalf of Brady and Turner, on the ground that they held official positions and acted on their discretion, and that they were improperly joined with the others. Judge Wylie held that a conspiracy was a single crime, and that all engaged in it were on the same footing without regard to the official relations of some of them. J. W. Dorsey was not in court, and his counsel was somewhat warmly accused of violating a pledge to secure his presence whenever the trial was to take place. In consequence of his absence an adjournment was taken to the 16th, when he appeared, and gave bail. At that time counsel for the Government announced that they had concluded, instead of having Rerdell reindicted separately, to get a new indictment against all the alleged conspirators; otherwise they might be compelled to have two trials, going over practically the same ground. On account of this determination there was a further postponement until May 25th, to await the action of the Grand Jury. The trial of Rerdell in the police court was also suspended.

On the 20th, the new indictment was presented. The name of Sanderson was omitted, the date of the conspiracy was changed, new allegations of overt acts were introduced, and other supposed defects of the old indictment were remedied. Efforts were made on the part of the defense to have the new indictment quashed on much the same grounds as those on which the former one had been attacked, but it was sustained, and the trial peremptorily set down for June 1st. In rendering his decision, Judge Wylie said:

This was the third, or perhaps the fourth, time he had been called upon to pass upon the sufficiency of this indictment, or the other, which was substantially the same. The indictment seemed to be very explicit. It detailed the duties of the officers of the Post-Office Department. Twenty-two contracts were specified in it as forming a basis for action against the defendants. It charged that the second assistant postmaster-general, the chief clerk, Turner, and the contractors had entered into a conspiracy to defraud the Government. It was a conspiracy of the most aggravated description. The date alleged was May 27, 1879. The means—the false papers—were alleged; the object—to obtain money illegally from the Treasury—was set forth. The present law required the conspiracy to be accompanied by the commission of overt acts. There were 36 such overt acts set forth in the indictment. After a critical test, only one or two had been found insufficiently defined. He did not know that the Government would ever be able to make out a conspiracy, but he was bound by the facts presented. He took it that every word in the indictment was true. He could not, from his own knowledge, say the amounts paid were not excessive, but was bound to accept the averment contained in the indictment to that effect. As far as the forged papers were concerned, in his opinion any paper calculated to impose upon and influence improperly the postmaster-general was illegal. The defense said they had a right to know under what statute they were being proceeded against. "They have that right," said Judge Wylie, and he proceeded to read section 5,440, Revised Statutes. "There are several other statutes that would apply. Any one of them would answer." Turner, perhaps, did not make as conspicuous a figure as some others in the conspiracy, but in his position he was a necessity to the success of the conspiracy. This fact, and the additional one that no overt acts were alleged against him, had been made the basis of his counsel's argument. But he may have been as guilty as any in the conspiracy, and for the present he would hold that Turner had been amply connected with the conspiracy. Although not present at all, one may be bound by the acts of a fellow-conspirator where the conspiracy is concerned. "God knows," said Judge Wylie, "it would be a horrible state of society if a criminal could escape when brought before a court by denouncing the law."

On the 1st of June, the day set for the trial, there was a panel of twenty-six petit jurors in attendance, and during their preliminary examination the question was raised as to the number of peremptory challenges to which each side was entitled. It was contended, on the part of the prosecution, that each side was entitled to three challenges, and no more; while counsel for the defense claimed that the Government was entitled to none at all, while each of the defendants was entitled to four. A conflict between the General Statutes of the United States and those relating to the

District of Columbia in this respect gave rise to elaborate arguments on this point, and the Court finally decided that the Government should have three challenges, and each of the defendants four. In the process of obtaining a jury the prosecution had exhausted its right of challenge when five men were placed in the box, while the defense had used only fourteen of its twenty-eight challenges when the jury was complete. The panel was exhausted, and four talesmen were called by the marshal; but there was no delay in obtaining a jury. It was made up as follows: Foreman, William Dickson, real estate and claim agent; Matthew McNelly, shoe-dealer; John B. McCarthy, printer; Edwin J. McLain, lawyer; William K. Brown, teacher; Edwin D. Doniphan, shoe-maker; Henry A. Olcott, livery-stable clerk; William Holmead, grocer; Thomas Martin, barber; George W. Cox, dealer in gentlemen's furnishing goods; Hugh T. Murray, clerk; Zachariah Tobriner, broker. Of these, Brown and Martin were colored. In asking the judge to warn the jury against talking with other persons about the case or reading the comments of the newspapers, Mr. Merriek, in behalf of the Government, reminded the Court that certain journals in the interest of the accused were wont to abuse everybody connected with the prosecution, and had even attacked the judge himself. "After this case has been tried," said Judge Wylie, "I will direct the attention of the Grand Jury to these publications." This remark led Colonel Totten to rise and declare that when the newspaper business should be ventilated, the defense would be on hand and pay attention to the papers all over the country which had vilified their clients and manufactured public opinion against them.

The opening of the case on the part of the Government was made by Mr. George Bliss, who began his address on the 2d of June and completed it on the 5th. He went over the allegations of the indictment with regard to the nineteen routes, and made explanations tending to show conspiracy and fraud, and promised to substantiate these by evidence. The opening for the defense was made by Judge Jeremiah Wilson, one of the three lawyers directly representing Brady and Turner, and Judge McSweeney, of Ohio, who was of counsel for the Dorseys. This occupied the 6th, 7th, and 8th, though on the latter day a beginning was made in the taking of testimony. On the same day the judge took occasion to remark upon certain references which had been made in the newspapers to the jury, especially as to the manner of selecting the last two jurors from talesmen called by the marshal. After speaking of the facts, Judge Wylie said:

I have seen so much injustice done to jurors and to litigants, and to courts who are engaged in the administration of justice, that I feel called upon in this case to declare that these charges, in my opinion, are without foundation. These flying rumors are calculated to do great harm. There is a law which subjects par-

ties to prosecution for libel in consequence of articles published, the effect of which is to obstruct the administration of justice, and I do think it will be the duty of the District Attorney to call the attention of the Grand Jury to some of these newspapers, and see if we can't have justice administered fairly, according to law, without having jurors disparaged and misrepresented on mere conjecture or fancy; and I trust that the jurors in this case will see the propriety of guarding their own conduct while the cause is pending, so as not to subject themselves to good grounds of suspicion, or even to the appearance of improper conduct. I will only lose faith in the jury when driven to by something more than newspaper articles. Gentlemen of the jury, your position is one of much delicacy. Don't allow any person to approach you or to suggest their own views, or make any intimation whatever, whether they are connected with the trial of this cause or appear to be unconnected with it. You don't know what motives may influence suggestions from persons outside. Keep your own counsel, follow your own judgment and conscience. Keep yourselves uncontaminated by the world outside.

An attempt was made, on the 9th, to introduce the evidence regarding the statement or "confession" of Rerdell, which had in substance been given in the police court by ex-Attorney-General McVeagh, ex-Postmaster-General James, and Inspector Woodward. This was objected to, and after a controversy between counsel it was barred out as incompetent until the existence of a conspiracy should be shown by other evidence. The Court said that conspiracy was a crime which required more than one participant. The rule of evidence was, that no one person's confession could be used to convict another. The other rule was, that, before binding one conspirator by the statements of another, there must be an agency shown. In this matter the conspiracy was the offense. In murder it is the death, and if a man should confess to having murdered another, it would not bind him. It must be first shown that the man was dead, or that there was a reasonable probability of his death. He was of opinion that the evidence was not admissible at this stage. As to the assertion of the prosecution, that the jury must determine when the evidence was sufficient to prove the existence of the conspiracy, it was, he believed, wrong in principle, and in his opinion the matter is entirely within the judgment of the Court. When he was satisfied from the evidence of the existence of a conspiracy, he would allow this testimony to be introduced. After reading several authorities, Judge Wylie concluded by saying that a person could only convict himself by a confession, and could not even do that until the crime was first made out.

As the trial proceeded, it was evident, from the efforts of the counsel for the defense to exclude testimony, that it was their purpose to confine and restrict the admission of evidence as closely as possible. Very many of their objections were overruled, and exceptions were noted. The evidence related to the methods of the Contract Bureau, to the facts concerning the routes, the methods of service, its requirements, etc., in great detail. In overruling the objections of the defense to the evidence of

some of the drivers and sub-contractors, which was intended to show the fraudulent character of the petitions and affidavits of contractors, the Court said:

Now, the Government in this case has undertaken a mighty task. It has combined some seven or eight defendants in one conspiracy, and it has charged that the subjects of the conspiracy were nineteen different contracts and sub-contracts, and it has undertaken to make out its case against all these defendants under this combination of contracts and sub-contracts, and under charges specially setting forth the overt acts done by the conspirators and through the medium of the Post-Office Department and the Treasury Department, and it is a scheme of the most comprehensive character, and one which it is called to establish. That is all. But the Court, in looking at the offer of evidence in any particular case, must regard the evidence in relation to the comprehensiveness of this indictment and of the scheme of the prosecution. It is necessary that there should be a conspiracy. If the conspiracy be established, as charged in this indictment, then it comprehends all these nineteen or twenty different contracts and the service under those contracts. From the relation of the conspiracy those contracts become blended. They are put into the concern as constituting one capital. The law in regard to the overt act, in pursuance of the conspiracy, requires one overt act. And one overt act by any one of the conspirators is enough for the purpose of the prosecution. The conspiracy must be made out. A conspiracy is different from a combination in this, that the conspiracy must have a corrupt character. A combination or a partnership is lawful. If all these parties had entered into a combination, each one to put in his contract or his sub-contract as his contribution to the common capital, with a view of dividing the profits, that would have been perfectly lawful. There would be nothing wrong in that, either morally or in the eye of the law. That would not, of course, be the subject of a criminal prosecution. It was necessary, therefore, not only that there should be a combination, but that there should be an evil combination—that is, a conspiracy with an evil purpose. It is not required that the indictment, in charging the evil purpose, shall set out the specific act to be proved. It is necessary that the indictment shall contain some averment to change the lawful combination into an unlawful conspiracy, and that is done when the indictment charges the combination first, and then charges that it was done for the purpose of committing a fraud upon the Government by means of false petitions, false papers, false affidavits, and so on. . . . In my view the conspiracy has not yet been made out. We are going along in that direction, but with what success for the Government, or with what failure for the Government, the future alone will be able to disclose. For the present, regarding the evidence as respects this route as tending to show that there was a fraud on the part of one of these defendants alleged to be a member of the conspiracy, that there was a fraud contemplated by him in his conduct of that route, for which he was the contractor, and in contemplation of the future progress of this cause, in which the Government will be required to show that this fraud was put in as a part of the common capital stock of this concern, I shall allow the evidence to go in.

Objection to testimony regarding the details of service on different routes was subsequently strongly urged. It was contended that the inquiry could not go beyond the papers and alleged fraudulent petitions on which the second assistant postmaster-general had granted his orders. The judge, in overruling the objection, said: "A conspiracy may be made out by many minute circumstances. If they are numerous enough and significant enough they may amount

to proof." The indictment had charged, he continued, that the object of the conspiracy had been to get through General Brady, by many means, money not earned. The petitions might all be genuine, but they were only a part of the means, and the Government could support the charge by other evidence in accordance with the provisions of the indictment. This decision let in the testimony of mail-carriers and others on the routes. In ruling out the records of the Inspection Division in regard to fines on the 27th of June, Judge Wylie remarked that he had seen in this case a great many petitions from men of the highest standing in the country, asking for increase or expedition on these routes. On the face of these papers he could not see anything calling for the condemnation of Brady because he had complied with the petitions. Brady was not expected to go over the routes, but must act on the petitions. "You have not," he said, "brought home to him any facts showing that, in ordering expedition, he acted from improper motives, for he is backed by these petitions, and the recommendations of men of high standing acquainted with the country and its development. If I can see anything in the evidence to bring home to him a reasonably strong suspicion of improper motives, I will not hesitate to go into this further; but no evidence of this kind has been offered, and the contracts seem to be sustained by the petitions, which justify him. Am I to allow the time of the Court to be taken up with an investigation of fines and remissions? I shall exclude this evidence at present." Afterward he declared that the Government had impeached Brady in the indictment and by speeches, but not by evidence thus far. In reply to Mr. Merrick's suggestion about protests from postmasters and others, the judge said: "If a postmaster complains or protests to the department after an order has been made, is the second assistant to trust him against all the petitions and recommendations on which he acted, and break up the arrangement on that account?"

An episode which attracted some attention occurred early in July. The Grand Jury had been previously dismissed until October, but on the 7th of July an order was signed directing it to reconvene on the following Monday. This action was taken in consequence of the following request from District Attorney Corkhill: "In view of exigencies which have arisen, I have to request that an order be issued directing the grand jurors to convene at as early a day next week as possible. This request is made because of information received from Messrs. Bliss, Merrick, and Ker, representing the Government as special counsel, that matters have recently come to their knowledge which require the organization of the Grand Jury at an early day, in order to prevent certain prosecutions, which it is their duty to institute, from being barred out by the Statute of Limitations. I am led to believe that the

matter referred to will not occupy the attention of the Grand Jury more than a couple of days."

The purpose of calling together the Grand Jury was to lay before it evidence regarding the San Antonio & Corpus Christi route in Texas, upon which J. B. Price was the contractor. This evidence was to be given chiefly by John A. Walsh, formerly a banker in Washington, and was expected to implicate Senator Kellogg, of Louisiana, in the alleged frauds. The Grand Jury received the instruction of the Court on the 12th of July, and proceeded to listen to the proffered testimony. Shortly after retiring they reappeared, and inquired if the jury had discretionary powers as to allowing the prosecuting officer of the Government to be present. The judge replied that the jury could not exclude him; he had a right to be present, if he desired, while witnesses were under examination, but not when the members of the jury consulted among themselves. The foreman asked if the prosecuting officer had a right to be present during the entire time of the examination, and received an affirmative answer. On the following day the Grand Jury reported that they found no ground for any new indictment, and were dismissed. Mr. Walsh thereupon caused to be published the substance of his testimony, and claimed that the Grand Jury had been improperly influenced to ignore the charges laid before them. On the 17th of July, Senator Kellogg published the following explanation:

With reference to the interviews published in two New York journals this morning, in which John A. Walsh attempts to connect me with the Star Route cases, I have only this to say: The Grand Jury of the District of Columbia, composed of twenty-three of the best citizens of Washington (the majority of whom are opposed to me politically), last week carefully and thoroughly examined the checks, etc., in Walsh's possession, and heard all he had to say which tended in any way to connect me with the Star Route cases. I understand that every member of that jury exonerated me from any complicity with these cases. The statements of Walsh are composed of truth and falsehood, which are so skillfully woven together as to create an impression unfavorable to me. It is true that I had the misfortune to have some business relations with Walsh in his capacity of banker. I am sure that if the testimony of Walsh before the Grand Jury were given to the public as it was given to the Grand Jury, the public could not resist reaching the same conclusion that the Grand Jury reached. The purpose of Walsh, evidently, in making a public statement, is to place himself in a better light before the public than that in which the Grand Jury left him when they came into court and said by their action that his testimony was not worthy of belief. The action of the Grand Jury relieves me of the necessity of replying to Walsh's statements in detail. If I deemed it necessary, I could readily and satisfactorily explain how Walsh came into possession of the checks referred to by him. I am confident, however, that the public are satisfied that the Grand Jury found that the possession of these checks by Walsh did not result from any illegitimate or dishonorable business transaction on my part. The whole matter having been settled by the legally constituted authorities, I do not propose now to discuss it in the newspapers. If, however, when the Grand Jury again meet, they desire to institute an inquiry as to whether Walsh has been guilty of perjury in stating that he divided the

proceeds of the postal draft referred to by him between myself and Mr. Brady, or in making other statements affecting me, I shall hold myself ready to go before them for examination.

W. P. KELLOGG.

About the same time an agreement was made between representatives of the Government and what was known as the Salisbury and Parker combination to submit to arbitration the questions involved in charges against those contractors. The Board of Arbitration was to consist of the second assistant postmaster-general, Mr. Elmer, one of the counsel for the prosecution in the Star Route cases, or a person named by him, and Robert G. Ingersoll, of counsel for the defense, or a person named by him.

The next question of importance to come up in the trial of Brady and others was that of admitting the testimony of Mr. John A. Walsh, who was called as a witness on the 18th of July. Counsel for the Government stated that it was intended to prove by him "that at about the same time when the routes mentioned in this indictment were increased and expedited, Brady had ordered increase and expedition on other routes, including the one held by Mr. Walsh; that Brady said to Walsh that when contractors got such expedition they paid him 20 per cent for the order; that he said to exact such a percentage was his invariable practice in such cases; that he said this was well known among contractors; that, having ordered expedition on Walsh's route, Brady claimed that Walsh owed him 20 per cent; that he said to Walsh that Walsh must have understood this, and that if he did not understand it he must be a fool; that he said he (Brady) did not expedite routes for fun; that Walsh must pay as others paid; that Brady made a calculation, and said that there was due him from Walsh more than \$30,000, and that he took up from the table the promissory notes he had given Walsh for his loans and put them in his pocket, saying that these had been a mere form, and that Brady had also told Walsh that the petitions were only a matter of form, to serve as an excuse for the orders made by him."

The admission of this evidence was strenuously resisted, but Judge Wylie decided to admit it. In rendering his decision on the 20th of July, he began with the statement that the question of the admission of this evidence was one of great difficulty and of importance to the case. He acknowledged that at the opening of the case he had believed that the declaration of one of the defendants could not be received until it had been shown that the declaration had been made in the furtherance of the conspiracy. But in this offense the authorities all lay down the rule that it might be proved by evidence of distinct, separate acts done by the different conspirators, and the law allows all of their acts, even declarations, to be proved if they are connected with the case. If they go toward making up the entire proof in their collective form, their admission is not irregu-

lar, and the law allows of their being proved. Now, as regards the declarations or admissions of the several parties, of course they are not evidence against the other parties unless they have been done in the furtherance of the objects of the conspiracy. But the evidence now offered for the Government was not for the purpose of showing criminal intent on the part of the other defendants. If the admissions of one party could be received against himself, the admissions of all could likewise be received. Greenleaf's rule, Judge Wylie said, was that the evidence against individuals could be received even though it was a joint suit. While all of the text-books were very emphatic in excluding the declaration of one defendant so far as it applied to others, they were all careful to make the reservation that it could be received against himself alone. So he was of opinion that the evidence offered was admissible. But as to the offer, it went to show only that Brady was in the habit of extorting and receiving money from parties. Now it seemed by no means a strained construction, that if the facts set out in the offer were testified to and believed, it would show that there was a corrupt administration of the affairs of the department. It would, however, depend greatly upon the amount of credit the jury would be willing to attach to this evidence, but upon its face the Court regarded it as pertinent to the case, and would admit it.

After Walsh's testimony was completed, an offer was again made to prove the confession of Rerdel through certain witnesses, including ex-Attorney-General McVeagh and ex-Postmaster-General James. On the question of the competency of this evidence, Judge Wylie made a ruling on the 24th of July, concluding as follows:

It is very true that no extra-judicial admission is sufficient to establish what is called the *corpus delicti*, and that rule applies as well to a case of conspiracy as to any other criminal prosecution. A man can not be convicted of murder on his admission. It must be proved that there was a dead body, that a man was killed, and then his admission will be taken as very strong evidence against him. In regard to conspiracy, the *corpus delicti* is the combination of the parties, not the criminal combination of the parties any more in the case of conspiracy than in the case of murder, because finding a man dead does not prove that anybody has committed a crime. In conspiracy, combination takes the place of death in the case of murder. The combination is the *corpus delicti*. The confessions of the parties may show the criminal character of the combination, just as, in the case of death, the confession of the man charged will convert the death into a murder. It is not murder because the man is dead. So in conspiracy: the combination is not conspiracy until the fraud upon the part of the combiners, the members of the combination, is established. And I think, having shown the combination between the parties with a view to obtaining money from the Government under these contracts, that is the *corpus delicti* in this case. The criminal purpose is another thing. That may be established by the acts of the several parties, or by their several declarations. It is unquestionably the law, whatever dicta you may bring from books, that in a trial for conspiracy the charge may be made out by proving the acts

of one of the conspirators at this point and at this time; by another of the conspirators at another place and at another time; by a third at another place and at another time, all having connection with the same subject. I think that no Court would venture to decide otherwise. The law is too well settled in regard to that. If, then, a man's act at one time, alone, distinct from others, another man's act at another time and distinct from all others, and a third one's acts at another time and distinct from all others, may be given in evidence for the purpose of weaving together the joint offense of conspiracy, then why should not the several declarations of these parties? I recognize fully the well-established point that no act of a conspirator can be given in evidence to charge his co-conspirators, unless that act was an act done in furtherance of the common object. That rule springs out of the law of agency. Unless a man is authorized to bind his fellow, his acts can bind nobody but himself. But if there be a joint partnership in civil matters or a criminal combination in offenses, there is a common partnership between them for the purpose of the combination, and they are each partners of the other in regard to that, so that the acts and declarations in furtherance of the common object will bind not only themselves, but bind their fellows. But when a combination, that is, the *corpus delicti*, has been shown, then I think the criminal character of that combination may be established by the several acts of the parties in the combination, each one, to be sure, bound only by his own declarations or acts. It is somewhat inconsistent, and it is very difficult sometimes to confine a piece of evidence to its legitimate purpose. After the purpose of the conspiracy has closed and the conspiracy is scattered, the members have no agency from each other, so that their acts bind nobody but themselves severally. But I do not know any authority, none has ever been brought to my attention, to the effect that after the *corpus delicti* has been shown, a man is not able to bind himself by his own confession. If one man in the combination can bind himself, each of the others can; and if they all confess, the combination is then proved to be a conspiracy, a criminal offense in contemplation of law. Now, as I said before, there are combinations that are lawful and there are combinations that are criminal. In the present case, it can not be denied that the evidence already before the Court is sufficient to show that these several contractors had intimate mutual relations and interests between themselves in these several contracts. It can not be denied that there is evidence, and a good deal of it, tending to show, and tending strongly to show, that there was a great abuse of discretion and power on the part of the second assistant postmaster-general in regard to these orders for expedition. Here is a combination in business; in intimate relations in business; money paid to enormous amounts without really any adequate returns to the Government; money paid by the second assistant postmaster-general to these parties; contracts entered into for service at one day in the week and then suddenly, in a very brief period, without apparently a motive in the world, increased to seven times as much, and that seven times service doubled by three or four times expedition of the whole, so that a small contract for \$2,300, or something like that, would run up to \$50,000, or \$60,000, or \$70,000. Well, now, these are things that are not to be whistled out of sight. They are not to be pooh-poohed away by a breath of one's mouth. Here are facts, in my opinion, going to establish what is called the *corpus delicti*. All that is needed to make, in my judgment, the charge criminal conspiracy, is the corrupt motive; and, as in the case of murder—the case of homicide, rather—the case of death, the death itself may be perfectly innocent, produced by nobody from any criminal cause in the world, but it may become criminal, and in the highest degree criminal, by a confession. The confession becomes united with the death, which was before innocent in the eye of the law, and converts it into a murder; and so here, all

this combination between these parties may have been an innocent combination with a lawful purpose. Men have a right to make money. They, in general, have a right to make the best contracts they can get in making contracts of that character, especially with the Government of the United States. It is a common trade. So, although all this combination, all this arrangement, may be innocent enough, yet it may be suddenly converted by the acknowledgments of the parties into a crime, because of the criminal purpose with which it is accompanied and the fraudulent means with which it was carried into effect.

The evidence for the prosecution was closed on the 28th of July. Among the witnesses who had been summoned was ex-Senator Spencer, of Alabama. Mr. Spencer was at one time in Washington during the trial, but when called did not appear. It proved that he had gone to the West, and, although he was in the employment of the Government as a commissioner of Pacific railroads, his attendance was not secured, and his whereabouts were said to be unknown. The evidence for the defense was begun on the 31st of July. The first witnesses were senators and others, who had joined in petitions, or made recommendations of an increase or expedition of service. An effort was also made to show the policy of the Post-Office Department in maintaining a liberal mail service, to assist in the development of newly-settled districts, but the evidence for this purpose, including that of ex-Postmaster-General D. M. Key, was excluded. In ruling out this testimony Judge Wylie said: "This Court is not going to sit, and is not now sitting, to decide a nice question of policy. We are engaged in trying a crime against the Government and laws of the United States. The Court knows no policy for the Government except such as is set out in the law, and no offender against the law can screen himself by producing postmaster-generals or senators or representatives who urged a certain policy upon him. He had the right under the law to expedite. He had the right under the law to increase the service. The policy of the Government is to be found in the laws, and to be measured by its law; not otherwise. The Supreme Court of the United States has decided that in the interpretation of the laws you can not look to the debates in Congress. They say that the policy of the Government is expressed in its laws, and the laws are not to be interpreted even by the debates that took place on their passage. It was said that this policy was the policy adopted by the second assistant postmaster-general under certain advice, and that it was a right policy. Well, suppose it was right: suppose he had the power to adopt this policy, and the policy was correct in principle: what does that tend to do in this case? What influence has that upon this case? Why, Lord Bacon defended himself against the charge of bribery by saying that his decisions were right. He took bribes for deciding correctly, but he was properly convicted of bribery, and stripped of his gown and reduced to

disgrace. Well, suppose that this policy was right. Admit that it was right. We are not trying a question of policy. We are trying a question of crime. And suppose that the offense charged in this indictment is nevertheless made out, what becomes of your policy? The policy passes for nothing, no more than the correctness of Bacon's decisions could be a shield against the charge of bribery. It is not the policy we are inquiring about; it is the charge of corrupt conspiracy for the purpose of establishing those routes, or rather for the purpose of expediting and increasing the service."

The only one of the accused placed upon the witness-stand was Harvey M. Vaile, whose interest in the contracts was first acquired in August, 1878, and the testimony for the defense closed on the 7th of August. One day was occupied with rebutting testimony, at the close of which Mr. Bliss presented an affidavit with reference to the witness Spencer, covering a statement of the efforts to secure his attendance, and the facts which it was expected to prove by him. In this it was said that Spencer could testify that on one occasion he was present in the room of the defendant, S. W. Dorsey, when the latter took from his pocket and placed in an envelope six bills of \$1,000 each, and laid the envelope with the bills in it on the table, telling him he expected the defendant, Thomas J. Brady, to call in a short time, and he wished to show him (Spencer) what sort of a man Brady was, and how he (Dorsey) did business; that in a short time Brady called, and that, after a few moments of casual conversation, Dorsey told him that some one had left an envelope for him, and that Brady took the aforesaid envelope, put it in his pocket without opening it, and soon afterward left, carrying it with him; that prior to that time, and when speaking of Brady's calling, the said Dorsey had stated that Brady was a thief, and had further said that he (Dorsey) was interested in mail contracts; and it was further stated, on information and belief, that Spencer could testify that, at a time subsequent to the conversation, Stephen W. Dorsey came to the room of said Spencer, in the Everett House of New York, in great trouble and despondency, and stated to him (Spencer) that his clerk had "gone back on him," and had "given away" the whole story, and had betrayed the whole business, with more to that effect; and that some days later the said Dorsey stated to said Spencer that the matter had all been fixed up; that Mr. James W. Bosler had sat up with the said clerk all night, and had finally succeeded in persuading him to make an affidavit denying his original statement.

A counter affidavit was filed by Mr. Ingersoll, denying the allegations of Mr. Bliss's statement. A sworn denial was also made by General Brady, and filed by the defense. The summing up on the part of the prosecution

was begun on the 9th of August, by Mr. Ker, who occupied three days in addressing the jury and bringing together the facts, as he claimed they had been proved by the evidence produced. The first address for the defendants was made by Mr. R. B. Carpenter, who began on the 14th and concluded on the 15th, and was followed immediately by Mr. R. T. Merrick for the Government. Mr. Merrick admitted that the case had not been proved as to Turner, but claimed that all the other indicted persons, save Peck, who was dead, had been proved guilty of the crime charged. He was followed by Mr. Chandler for the accused. In the course of his address a colloquy occurred between counsel and the Court as to the necessity of convicting all or none of the defendants. Judge Wylie stated, without making any formal ruling, that "so long as there are two to be convicted, the Government may fail as to all the others. If the jury are satisfied that two are conspirators, a conviction is proper, though the charge in the indictment was against them and many others." The address of Mr. Chandler was completed on the 17th of August, and the argument for the prosecution was taken up by Mr. Bliss and continued for the greater part of two days. On the 21st, Mr. Williams and Mr. Totten addressed the jury for the defense, and were followed the next day by Mr. McSweeney on the same side. He occupied two days, when Mr. Merrick again took up the case on behalf of the prosecution, and summed up the evidence in an address, which covered three days of the sessions of the court. He was followed by Mr. Wilson and Mr. Henkle for the defense. The latter, who was counsel specially for Mr. Vaile, occupied nearly three days, and concluded on the 4th of September. On the last of these days he was somewhat sternly checked by the Court for persistently attempting to comment upon what ex-Postmaster-General Key might have testified to. Mr. Henkle was followed by Mr. Ingersoll, who occupied part of two days. The closing address for the Government was made by Attorney-General Brewster, who began on the 6th and concluded on the 7th of September. At the close of the session on the latter day, Judge Wylie, after arranging for the presentation of the prayers of counsel as to the points of the charge to the jury, made the following statement:

Several of the members of the jury have come to me with the information that they have been approached with propositions most manifestly of a corrupt kind. The first intimation I had of this kind was several weeks ago. Several more—I can not call them intimations, they are square and direct informations given to me privately for the purpose of asking me what they (the jurors) should do. My advice was to say nothing about it. The Court did not want to interrupt the progress of the arguments of the case by any such side question as this. But I advised them to be careful. This thing has grown, and within the last twenty-four hours it seems that these wolves, which have been around this jury, have become fiercer, more determined. I felt so much indig-

nation that I was almost ready to advise the jury men to shoot the men on the spot. That is the way I felt about it, but I gave no opinion. But villainy of this kind, scoundrelism of this degree, deserves no mercy. I do not say in what interest these suggestions have been made—I do not want to convey any information on that subject—but I want to advise this jury to reprobate with scorn and indignation any base attempt of this character on their virtue and integrity. The insult is of the last intensity, and I do hope that when we get through this trial fairly you may have information enough to enable the Court to lay its hands on men of this kind—on these men who have approached you in this way. I have called your attention to this subject with another view—to give a warning to men of this kind of what they are about, and that the officers of the law will do their duty. If it is possible to ferret out these scoundrels, it shall be done. Give them no quarter. Spurn them with the end of your toes. No baser vermin infest the earth than men engaged in this kind of business, and the insult to you is that they suppose that you are just as base, just as low, as they are themselves. No man should allow a whisper of this kind to be made to him without spurning it with the utmost scorn and contempt, if he goes no further. I do not advise violence at any time. Of course I do not. But next to the insult that is given to a man's wife is an insult of this kind to a juror. His honor should be as sacred and as carefully guarded as he would guard the honor of his wife. Having said this much collaterally at this point, we can now take a recess.

Protests were made by counsel of a desire to have the subject thoroughly looked into. The case was submitted to the jury on the 8th of September. In his charge to the jury, Judge Wylie spoke as follows regarding the features of the indictment and the necessities of proof under it:

This indictment may be said to have five features. The first is the historical part of the indictment. The second charges a conspiracy. The third describes the overt acts alleged to have been committed in pursuance of the conspiracy. The fourth alleges the overt acts. The fifth charges the partition of money alleged to have been fraudulently taken from the Government of the United States. As to the historical part, we know all about that, because it is found in the acts of Congress establishing the Post-Office Department. You need trouble yourself in no respect in regard to that. As to the means used in carrying out the conspiracy, you need trouble yourselves nothing about them. Whether they are properly described or not in the indictment, is of no consequence in this trial. As to the distribution of the money, that is a matter that will be determined by your finding on the question of conspiracy and the overt act. If you find the conspiracy, the distribution of the money follows. You can not find the existence of this conspiracy as charged in this indictment without finding that the conspiracy was for the purpose of dividing the money among themselves and of defrauding the United States. So, if you find the conspiracy, you find the truth of this part of the indictment. In fact, the only consideration about which the jury need concern themselves in their deliberations is whether there was a conspiracy, followed by overt acts. It has never been held on the trial of an indictment for conspiracy, that the Government was bound to prove the exact means described in the indictment. So, when the indictment declares that there are several contractors having nineteen different contracts, and that they were mutually interested in the contracts, that is a matter of historical detail or description, or means not entering at all into the charge of conspiracy. Whether these parties were mutually interested in the several contracts or not, is of no consequence. The conspiracy did not give them a common interest in those con-

tracts, but it was a conspiracy in regard to those several contracts. The parties remain several owners in their own contracts, but bound together by the tie of the conspiracy, and it was in that view that the Court held that an overt act, done under one of those contracts, was an overt act as to them all, because they were all a common subject of conspiracy. . . . It is in your power to acquit every man of these defendants, except two, and find them guilty. It further follows that if you should acquit one of these conspirators, and the overt act was his, and there were no other overt acts in the case, you can not convict any of them. The defense claims that the conspiracy must be made out as to all these contracts, and that unless the conspiracy is established under each of the contracts there must be an acquittal of all of the defendants. That is not so. If you should be of opinion that there was a conspiracy between the defendants, though relating to but one of the contracts, that will sustain the indictment. These matters are the means and instruments of making out the charge of conspiracy, and if there is enough left in the evidence showing that there was a conspiracy as to one of the routes, followed by an overt act, the conspiracy is established. Surplusage in an indictment will not vitiate it. If it did, bad luck to many indictments. This indictment is one, and charges one offense. Though long, it contains but one count. The instruction of the Court is asked on the question whether, if there be two conspiracies proved, there can be a conviction. I am of opinion that there can not be. You may acquit part of the defendants wholly and convict others, but if you be of opinion that the proof shows two conspiracies, that will not do, and the indictment fails.

Now, as to the proof of the indictment. The people who commit crimes avoid the light, and all crimes are more or less difficult to establish for that reason. But as to conspiracies, they are peculiarly products of darkness. They are very seldom reduced to writing. They are entered into generally in an informal way. The parties may not come together at all. They may live in different parts of the country. But if by any means they come to a mutual understanding for the purpose of committing a crime against the Government, that is a conspiracy, provided it be followed by an overt act. It is said that you ought not to convict a man upon circumstantial evidence, unless it be of the clearest and most convincing character. The rule is that you should be satisfied in your own minds beyond a reasonable doubt. But the reasonable doubt ought to arise out of the evidence in the case; it ought not to be a conjecture. It ought to be a doubt supported by a reason. The jury ought to be careful to see that the doubt is right, and arises from evidence.

The Court then proceeded to recall and comment upon the facts in the case of one small route in Dakota which had been originally let to J. W. Dorsey at \$398, which was afterward consigned to Vaile, contrary to law, through the device of a sub-contract, and upon which expedition and increase had been ordered until the compensation was \$6,133.50. The revenue of the route for the year ending June 30, 1881, was \$240. There had been petitions for increase backed by a request of the delegates of Dakota in Congress; but there had also been petitions of postmasters, supported by similar influence, asking for a restoration of the old schedule of time, which had been disregarded. Having recalled these facts, the judge expressed himself as satisfied that the law of Congress permitting the Postmaster-General to place service upon the Star Routes was drawn in a liberal way in order to allow him to exercise

his discretion fairly in regard to the increase of service and expedition whenever the public interest required such increase to be made. But here was an increase made at a heavy expense when the revenues had begun to run down. It could not be negligence. Negligence itself was a crime, when the injury fell upon the innocent and when the negligence was gross. There was no evidence in the history of this route to show that this remarkable result sprang from negligence. Manifestly it was purposely done; it was done with a motive. The question for the jury to consider, in trying this case, was whether the action of the second assistant postmaster-general was a mistaken exercise of his discretion, or was taken purposely, and with such a motive as ought not to inspire any man. It had been argued in this case, that if increase of service and increase of expedition have been allowed—granted, rather—in instances where there have been fraudulent papers, fraudulent affidavits, untrue affidavits, still, if the public service had been promoted, the acts of these parties, if they be criminal, are not subject to punishment, because they result in no injury to the public. He thought there was no soundness in such a view as that. That was doing evil that good may come, and that was neither good gospel nor good law. In regard to the proof of the conspiracy, several prayers had been presented, containing the principle that the conspiracy must be proved independent of the overt act; that the conspiracy could not be established *a posteriori*. Now, that was not so, and it had never been so. The proof of the conspiracy may be made out from the consequences that followed from the conspiracy.

On another important point the Court said:

The doctrine is maintained in several of the prayers, that if the jury believe that expedition was ordered on false affidavits, and there were genuine papers on file, they must attribute the order to the influence of the genuine papers. Is the bad saved by its alliance with the good? That, gentlemen, is not to be tolerated. That doctrine can not be tolerated in any court. There is nothing so odious in a court of justice as fraud. It is not only vicious itself, but it contaminates every thing that is associated with it. It is like a drop of poison in a tumbler of pure water. The party who commits a fraud very often finds it convenient to use truth for a scheme of falsehood. Truth and falsehood are always quarreling when left to themselves. The truth is, that falsehoods are of so impish a nature that they quarrel among themselves. But fraud is not exactly identical with falsehood. Fraud is a double cousin to falsehood, no doubt. But fraud, for its own purposes, will make use of truth or falsehood indiscriminately. Truth is impressed very often into the service of fraud, and can not get away. I have seen fraud of the most abominable character with a line of truth in its front, and all its impish tribe behind. The more of truth fraud can work into its service, the better chance is there for its success. But it is no less fraud after all. So that the fact that truth is sometimes found under the banners of fraud, is not to be suffered to justify the case of fraud.

In conclusion, the judge made an earnest appeal to the jury to disregard all improper efforts to influence their action.

The jury went out about noon on the 8th of September, and the Court took a recess until 6 o'clock to await the verdict. At that hour it was announced that they had not agreed "except as to one of the defendants"; and they were directed to retire for further consultation, and a recess was taken until 10 o'clock the next day. At that time no agreement had been reached, but the foreman desired to ask of the Court for further instructions, and handed up a paper. Judge Wylie said the jury had a right to be instructed by the Court upon any difficulty regarding the laws. As to the question of fact, that was their province. It seems, from the question, that the jurors were divided in opinion in regard to whether there were one or two conspiracies after May 30, 1879. That he understood to be the substance of the question now presented to the Court. It was a question of fact. He had endeavored to advise the jury yesterday in regard to the law to be applied to the fact in regard to this question. He could only repeat now substantially what was said yesterday—that if the jury were of opinion that the evidence showed that there were two conspiracies instead of one, it was impossible to find a verdict under the indictment. This was an indictment for one conspiracy, but it was not necessary that all of the defendants should be guilty, or none. It might be that some were not guilty of the conspiracy, and others guilty. As to the effect of the interchange of interest between certain of these defendants, which, it was claimed, took place about March 30, 1879, the Court had instructed the jury that no mere change of interest in the contracts ought to affect at all the question of conspiracy. If the conspiracy continued still, the interchange of interest between the members of the conspiracy would have no effect whatever on the conspiracy itself.

In reply to the question whether the date of an overt act as proved must agree with the date as set forth in the indictment, the Court replied:

This indictment is based on the statute approved May 17, 1879. You, gentlemen, have been sworn to try the case of conspiracy under that law, and the character of the conspiracy is set out in this indictment. If you believe that these defendants, or any of them, are guilty of this conspiracy, that is one step settled. When you reach that conclusion, sink a post there. That question being settled, the next one is as to the overt acts. There are forty or fifty pages of this indictment employed in setting out distinct overt acts. If any one of those overt acts is correctly set out, and such an act corresponds with the indictment, it is enough, though all the others may be incorrectly set out. I called your attention yesterday to the Vermilion and Sioux Falls route. I compared the overt act set out in the indictment with the overt act as it is proved in this case. The overt act in this case as proved corresponded in date and form to the overt act charged in the indictment, if you believe the evidence. I did not think it was necessary to go over all these overt acts *seriatim*, but I confined myself to a specimen. If in your judgment there is one conspiracy established as in existence since May 20, 1879, and it was in existence at the date of these overt acts, or any one of them, committed by any of the defend-

ants belonging to this conspiracy, the case is made out.

Counsel interposing here with requests as to instruction on certain points, the Court declared that the time had gone by for that, and refused to be interrupted, continuing:

The law requires that the overt act shall be proved as laid. There must be one or more overt acts identical with the charge in the indictment. The proof must be that some overt act described in the indictment has been made out. There are about forty overt acts described in the indictment, and if none of them are described correctly according to the evidence except one, and you find that the proof in regard to that one corresponds exactly with the description of the overt act in the indictment, that, I tell you upon my responsibility under the law, is sufficient. In regard to the overt act on the Vermilion and Sioux Falls route, if there be a paper in a case requiring interpretation, that interpretation belongs to the Court, and there is no question between the Court and the jury on such a proposition as that. It is absolutely the business of the Court to interpret written instruments. I read in the indictment the description of the overt act in regard to a certain route, and I read on the jackets produced here a description of an overt act done by one of the defendants, and that description corresponded verbatim to the last and minutest particular with the description in the indictment. It became the duty of the Court to say to you, gentlemen, that if you believe that the jacket is a genuine paper, and the order, signed "Do it, Brady," was written by Brady, there is no escape that the overt act is proved. I think now, gentlemen, I have made myself as plain as I am capable of doing.

Exception was taken to some of the remarks of the judge, and a colloquy ensued, during which the Court repeated to the jury, "Be sure you have a conspiracy, and then be sure that some overt act (one or more) performed by one of the conspirators is proved as laid, and, so far as you are concerned, the question is settled." In reply to a statement of Mr. Totten, that he excepted to all the Court had said, the judge replied: "I do not think that what I have said is at all gratifying to the gentlemen. I think that they do not like the law, and they have a right to except to it, and to hold the Court responsible to a higher tribunal." In reply to an exception of Mr. McSweeney to the expression "there is no escape" from certain conclusions, the Court said:

I will explain that, too. We are talking so that we can get the proper grounds for a decision in this case, and I shall be ready at all times to talk with the jury in regard to any difficulty they may have. As to the validity of the indictment, you are not judges. The Court has passed upon the indictment as a valid indictment long ago. We are engaged in trying not whether the indictment is a well-drawn instrument, but whether the evidence sustains the indictment. There is a conspiracy charged to defraud the Government, and there is only one conspiracy charged. You may find any two or more of the defendants guilty under this indictment. If the others are guilty of something else, they must be acquitted. Now, as to the overt act. If an overt act set out on the indictment is an overt act done by one or more of the conspirators, and that act is proved, I do not see where there is any gap left between the conspiracy and the overt act. If you are satisfied that the conspiracy exists, and then that an overt act has been proved as set forth in the indictment, the two elements necessary for a verdict are linked together by hooks of steel.

Where an overt act is proved in writing, the Court has a right to say whether that overt act corresponds in form to the overt act described in the indictment. It is for you to say whether those papers were brought from the department, whether this signature of Brady is a forgery or not, whether the execution of that order has been proved. But I am bound to say, that when a man's signature has been proved on one side, and not disputed on the other, it makes a pretty strong *prima facie* case.

Some of the jury remarking upon the difficulty of recollecting the dates and particulars of the evidence, Mr. Ingersoll expressed a willingness that they should have a copy of the record. This was objected to, but it was agreed that they might have recourse to their own notes, which they had been required to leave behind them in the first instance. The jury was dismissed, and not again recalled until 6 o'clock p. m., at which time the foreman said: "We desire to report to the Court that the jury have come to an agreement as to some of the defendants named in the indictment, not as to others." The Court was unwilling to accept a verdict in that form, saying: "The verdict of the jury, in my judgment, ought to be complete. You have a number of defendants here. Those who are guilty (if there are any) will have to submit, of course, to a verdict. Those who are innocent (if there are any) are entitled to the verdict of the jury. I do not mean to say that if, after a fair test, the jury should come into court and say that they are able to agree on a verdict as to some, but that they are really unable to agree as to others, the Court might not accept such a verdict. But it would only be after a longer trial on the part of the jury." In reply to a suggestion of Mr. Ingersoll, that if the jury were ready to acquit any of the defendants they might as well have the benefit of it at once, the judge said: "When it comes to the time when the Court is prepared to discharge the jury, and the jury should say, 'We find certain of the defendants not guilty, and are unable to agree as to others,' that would be the time for the Court to determine that question. But that time has not come. I think that no instance could be found in which a court of common law has accepted a verdict of acquittal as to one to-day, as to another to-morrow, and as to another the next day, or proceeded on any other such principle as that." The jury were shut up for another night, and, although the next day was Sunday, the Court met for the purpose of receiving their report, there having been no adjournment, but only recesses, since Friday. No agreement had been reached on that day, and the marshal was directed to enforce the common-law rule, and shut the jury up in their room until a verdict was reached. On Monday, September 11th, it was decided to accept as final such report as the jury had to make. At the morning session of the court on that day, the foreman, in reply to the usual question as to agreement, said: "I will report, sir, that the jury stand the same as they did

Saturday night. We have decided as to four of the defendants, and do not agree as to the others." The judge was unwilling to discharge the jury at that time, and they again retired, to be recalled in the afternoon. There was then no change in the result of their deliberations, and Judge Wylie said: "I have come to the conclusion to accept your verdict." "I am instructed," said Foreman Dickson, "by the jury, upon this indictment to make the following return: As to John M. Peck and W. H. Turner, not guilty; as to J. R. Miner and M. C. Rerdell, guilty; as to J. W. Dorsey, as to S. W. Dorsey, as to H. M. Vaile, and as to T. J. Brady, the jury are unable to agree." By order of the Court the name of Peck, who was dead, was omitted, and the verdict was recorded. The verdict seemed to give satisfaction to no one. Notices of motions for arrest of judgment and new trials were given immediately in behalf of Miner and Rerdell. The judge, in discharging the jury, followed the customary compliments with the remark that the verdict was not such as he would have been glad to receive, but he added: "It is your verdict, your work; you are responsible for it, and the Court is not." The foreman asked if he could present a sworn statement regarding attempts to bribe jurymen, but was not permitted to do so at that time. It transpired that on the final ballot in the jury-room the vote stood eleven for conviction and one for acquittal in the case of Vaile, ten for conviction and two for acquittal in the case of Brady and J. W. Dorsey, and nine for conviction and three for acquittal in the case of S. W. Dorsey. Jurymen Holmead voted for acquittal in the case of Vaile; Brown and Holmead in that of J. W. Dorsey; Brown and Dickson in that of Brady; and Brown, Dickson, and Holmead in that of S. W. Dorsey. The Attorney-General gave directions at once for preparation for a retrial of those regarding whose guilt the jury had disagreed, and the motions for a new trial of those who were convicted were promptly granted.

The investigation of the charge that attempts were made to corrupt or improperly influence the jury was placed by the Department of Justice in the hands of Mr. H. H. Wells, as special counsel. Mr. Dickson protested against this course, as the department was itself implicated, but it was explained as necessary on account of the press of business in the District Attorney's office. The charges related to alleged attempts upon Mr. Dickson, the foreman of the jury, and upon Jurymen Brown in the interest of the Government, and upon Jurymen Doniphan in the interest of the defense. Mr. Dickson had put his charge in the form of a sworn statement before the close of the trial. It was this which he endeavored to bring to the attention of the Court, and which he was afterward accused of using in the jury-room for the purpose of improperly influencing the verdict. He declared that on the 22d of August, at a popular resort known

as Driver's, he had been approached by Henry A. Bowen, who represented himself to be a special agent of the Department of Justice, and who intimated to him that \$25,000 would be at his command if he favored a conviction of the defendants in the pending trial. He declared that Bowen exhibited papers in proof of his appointment as special agent, professed to have authority from the department for his offer, and appeared to be acting with the concurrence of Mr. Brewster Cameron, one of the subordinates of the Attorney-General. The charge with reference to Jurymen Brown was that one Frank H. Fall, employed as a special agent by the Department of Justice, had tried to secure his signature to an agreement that he would vote for conviction, for \$2,500. According to the affidavits relating to this matter, Fall had employed Thomas R. Foote, who carried on the negotiation with Brown through Arthur Payne. Jurymen Holmead also testified that Fall had talked to him about the position of the jury, and the suspicion with which some of its members were regarded by the prosecuting counsel. In the case of Doniphan, it was said that one Frederick C. Shaw, who had been originally on the jury panel, but had been challenged by the prosecution, had approached him with an offer of money in behalf of S. W. Dorsey, if he would vote for acquittal. This was testified to by Doniphan himself. Mr. Wells made a report to the Attorney-General of the result of his investigations, near the end of October. With reference to the case of Dickson, after stating the points of the testimony which he had been able to collect in regard to the conversations with Bowen at Driver's, he gave the following as his conclusions:

Henry A. Bowen had no authority from the Department of Justice, or any officer or subordinate thereof, to make any offer to or treat with Mr. Dickson on any subject relating to the Star Route trial. That Mr. Bowen did not bribe, offer to bribe, or attempt, in the language of the statute, "to corruptly influence" the action of Mr. Dickson as a juror. That conversations did take place between Dickson and Bowen during the progress of the trial that were highly improper and unbecoming, but that the foreman did not believe that Bowen was acting or speaking with the knowledge or approval of the Attorney-General, or any person in charge of or connected with the prosecution of the Star Route case; that he did not believe that any real attempts at bribery were made or intended, but that he did believe that Bowen's purpose was to find out "whether the jury could be bought"; and that Dickson, though so believing, prepared his sworn statement on the night of the conversation, and made an unwarrantable use of it before the Court and with the jury in the jury-room, when they were considering their verdict, with the apparent purpose of securing the acquittal or preventing the conviction of some or all of the defendants. That Dickson sought an interview with Cameron, apparently for the purpose of obtaining from him some proposal, suggestion, or intimation, to be used before the jury for the purpose of bringing the conduct of the Attorney-General and his subordinates into dishonor and contempt, and thereby to influence the jury to acquit the accused.

His conclusion with reference to Brown's case was put thus:

It is apparent from the whole history of the alleged attempt upon Brown's virtue, that it was not done with the knowledge, in behalf of, or in the interest of, the prosecution; that its guilty authors were neither the agents nor acted with the knowledge or approval of any officer of the Department of Justice. It was a deliberate and carefully prepared conspiracy against the administration of justice, which view is confirmed strongly by the following considerations and circumstances:

1. That the Government could have no interest or desire to bribe jurors to convict. It would seem that those charged with the administration of justice would, from their position, have a natural desire that a full, fair, and impartial trial should end, if the accused were innocent, in an honorable acquittal.

2. There was no fund in the Treasury of the United States out of which the large sums alleged to have been offered in bribes could have been fixed, without making a public record of the infamous transactions, and specifying therein not only the amount and object of the disbursement, but the names of the persons to whom it was paid; nor could it be done even then without the connivance of other departments of the Government.

3. As soon, too, as the first intimation reached any officer of the Department of Justice that improper suggestions had been made, or it had been claimed that any one had authority to make such proposals, the authors thereof were summarily dismissed, and their pretended authority indignantly denied.

4. That every person who had made such false claim of authority, including Fall and Taylor, when charged therewith admitted the falsity thereof; and all persons present at any conversations between officers of the department who employed them or gave them their instructions deny that any such authority was ever given them.

5. That Brown, who, it was charged, had been bribed in another case; Taylor, who had before served a term in the penitentiary, and who procured Fall to be employed because of the latter's connection with the prior bribery; Nelson, who had received money from Fall to pay Brown for "hanging the jury" in the Long case; Laws, who claimed that he was the man who engaged Brown in that case, and who also claimed that he had been engaged by the defense to work Brown in this case; Foote, who employed Payne to bribe Brown, and brought him to Fall's office, seeing, as he says, Fall daily in reference to that matter; and, indeed, every one of the vile creatures who touched this infamous transaction, come forward without shame, but for what consideration I do not know, and put the proof of their guilt, in the form of affidavits, into the hands of counsel for the defendants.

Their crime was not lessened, but rather aggravated thereby. If any of them have had promises of immunity, they were not made by the Government, its officers, counsel, or agents, and I therefore recommend that for the offenses thus committed by them, both severally and jointly, they be jointly and severally indicted and tried under the laws and statutes applicable to such cases. This recommendation refers to Frank H. Fall, Arthur Payne, Thomas A. Foote, and any other persons discovered to have participated, aided, or abetted in that transaction. As to some of them, however, I must add that, for a successful prosecution, it will be necessary that the Government should be furnished with the affidavits published by Mr. Ingersoll, for which I have applied, and I assume they will be furnished.

The facts in the case of Doniphan were recapitulated in the report, and the counsel stated that there was "such a clear and unequivocal case of violation of the law against corruptly attempting to influence the action of a juror, as to leave no doubt of the propriety of a criminal

prosecution of the person attempting to corrupt this juror." He accordingly recommended that "Frederick C. Shaw, and all other persons who may be found to have aided or abetted in the offense, be immediately prosecuted on that charge. Warrants were issued for the arrest of Fall, Foote, Payne, and Shaw, and, after a preliminary examination in the police court of Washington, they were held for the action of the Grand Jury. In the course of the examination in the case of Payne, who was the first to be arraigned, George D. Miller, one of the Government detectives, admitted that he was accustomed to reveal to the defense information which he had collected in the service of the Government. He was subsequently dismissed. In the course of Mr. Wells's investigation, a sworn statement was made by Mr. Brewster Cameron, agent of the Department of Justice, explaining the employment of Fall. He had been introduced to Mr. Cameron by Edward Taylor, an employé of the department; and James Leonard, of the Marshal's office, declared that he had positive knowledge that Jurymen Brown had accepted a bribe in a former case. Fall desired to be employed for the purpose of collecting and presenting the proof of this, and was so employed. He afterward suggested that, if he could have command of three or four clerkships, he could control the action of two jurors. The suggestion was promptly resented, and Fall was at once dismissed from the service of the Government. The statement of Mr. Cameron was supported by affidavits, including one from Fall himself.

During the month of December, William Dickson, who had been foreman of the Star-Route jury, underwent trial in the Washington Police Court on a charge of violating the law in reading his statement to the jury for the purpose of influencing their action. The result of it was that he was held to await the action of the Grand Jury, and in January, 1883, both he and the others charged with attempting to influence the jury corruptly were indicted.

The new trial of the defendants in the Star Route case was set for December 4th, the opening of the new term of the Criminal Court. Judge Wylie presided as before. The names of two of the defendants were eliminated, that of Peck by death, and that of Turner by acquittal; and those remaining were Thomas J. Brady, Stephen W. Dorsey, John W. Dorsey, Harvey M. Vaile, John R. Miner, and Montfort C. Rerdell. On the 11th of November Mr. George Bliss, of counsel for the Government, had made a report to the President, in which he complained of the attitude toward the case of the Marshal of the District of Columbia, Col. Charles E. Henry; the Postmaster of Washington, D. B. Ainger; the Assistant Postmaster, M. M. Parker; and the foreman of the Government printing-office, M. D. Helm, the last-named being also the manager of a newspaper which had defended the accused and assailed the prosecution. The report of Mr.

Bliss was referred to Attorney-General Brewster, who, on the 24th of November, addressed a letter to the President reviewing the action of the marshal, postmaster, assistant postmaster, and foreman of the Government printing-office, and referring to the conduct of George E. Spencer, also an officer of the Government, who had evaded the process of the Court as a witness, and to the course of the police of the District of Columbia. In conclusion, he said:

After serious and prolonged deliberation over all the details of the case, my investigation satisfied me that the men who were indicted were guilty men, and merited the extreme punishment of the law. They had projected, under cover of official power and under color of official authority, a systematic plan of deliberate robbery of the public Treasury. To carry out that plan, they had laid their hands upon a fund dedicated by law to a great public service—a service that is conspicuously one of the fruits and causes of our civilization, our social comfort, our commercial prosperity, our national growth. Millions of that money they perverted to their own private gain, and divided it for their own personal purposes. It was a condign act of infamous conspiracy, and as such deserves the severest punishment the law can inflict. Such men are traitors to social and official duty, and they are public enemies, against whom the authority of the law must be exerted without hesitation or reluctance. The higher their past position the greater their sin—the sterner must be their punishment. I desire to call your attention to the fact that the officers of the law, and those who have directly been aiding me in the discharge of my duty in this business, have been from the first encircled with snares, pitfalls, and every species of vile device that could be invented to harm them, hinder their usefulness, and prevent the administration of justice. Some portions of this community who surround these defendants, and who have enjoyed, or do still enjoy, minor official positions, know no allegiance to any one but this band of robbers, and render no service to any one but these evil employers. From motives of gain, or other corrupt considerations, they are saturated with affinities for these bad men; and they have contributed, by every means in their power, at the bidding of their masters, to obstruct public justice and to defame its officers, with the hope of securing the acquittal and escape of the worst band of organized scoundrels that ever existed since the commencement of the Government.

This communication was followed promptly, on the 25th of November, by the removal from office of Henry, Ainger, Parker, Helm, and Spencer. Mr. Clayton McMichael, of Philadelphia, was subsequently appointed Marshal of the District.

On the 1st of December, Stephen W. Dorsey addressed a card to the public in explanation of his connection with Star Route contracts. He took occasion to refer to his political service, his activity in the canvass of 1880, and his intimate relations with General Garfield and other prominent Republican leaders. He attributed his prosecution to the hostility of Postmaster-General James and Attorney-General McVeagh, whose appointment as members of the Cabinet he had opposed. He denied all charges of conspiracy and fraud, and claimed that his connection with the Star Route service sprang from an innocent and well-meant effort, in the first instance, to render pecuniary aid to his brother

and brother-in-law (Peck), who had become contractors against his advice, and afterward to save himself from loss through the loans and advances which he had made. He maintained that the facts which he stated showed—

1. That at the beginning of President Garfield's administration two members of his Cabinet, whose personal hostility to me had grown out of my active opposition to their appointment to the positions they held, led them to seize upon the old Star Route scandal and use it as a weapon to break down my influence with the Administration.

2. That to do this, it was necessary to fill the public press with revamped falsehoods that had long since been worn and patched, and for this purpose there were established in the offices of the Attorney-General and Postmaster-General literary bureaus, beginning April 1, 1881, and up to this writing there has not been a day in a week nor a week in a month that the papers all over the land have not denounced me in unstinted terms, with no more evidence to justify their accusations than there is against every other person in the land.

3. That at a trial lasting more than four months, which took place after the country had been raked with a fine-toothed comb by detectives to find something damaging to me, there was not one line, word, or syllable of evidence produced against me. In the printed record of the court proceedings, containing more than 3,000 pages, there is not a scintilla of evidence that could be fairly charged as reflecting upon the uprightness of my conduct.

When the new trial began, Mr. W. W. Davidge and Mr. William A. Cook appeared as additional counsel for the defense. The time until the 14th of December was occupied in obtaining a jury. The question of the number of challenges to which the defense was entitled was reopened and argued at length, and Judge Wylie came to the conclusion that his former ruling had been erroneous—that they were entitled to only four peremptory challenges in all. In reading his new decision, he said that he would lose no time in explaining the conflict with his previous ruling. The statute relating to that subject (No. 888 of the Statutes for the District of Columbia) provided that a defendant shall be entitled to four peremptory challenges, but had no provision as to a case where there was more than one defendant. But a section of the Revised Statutes (819) did contain such a provision—to the effect that in all other cases (less than felony), civil and criminal, each party shall be entitled to three peremptory challenges, and that where there are several defendants or several plaintiffs, each side shall be deemed a single party for the purpose of challenges. This latter section was the law in this District, and had been since December, 1872. The two statutes should be read together (they not being in conflict), and, therefore, he ruled that the defendants in this case were entitled to four (not three) peremptory challenges for all of them.

Another question was also raised as to the necessity for the personal attendance of the accused. Mr. S. W. Dorsey was troubled with an affection of the eyes, which was said to necessitate close confinement to his room. To test the question, a motion was made by Mr.

Merrick that Mr. Dorsey be compelled to appear in person in the court-room. This was approved by his counsel, who took the ground that his presence was necessary to a fair trial, but that he was unable to attend, and the trial as to him could not proceed. The Court held that the defense could be just as well maintained in the absence of a defendant, except in case he proposed to testify in his own behalf. The Court would be prepared to meet that point when it came up, but refused to postpone the trial. Mr. Ingersoll then moved for a severance on the part of S. W. Dorsey, and the continuance of the case as to him, but this was refused. The challenges on both sides were exhausted when ten jurors had been obtained. The jury, as completed on the 14th of December, was made up as follows: John H. Crane, commission merchant; John Hughes, carpenter; Clarence Shields (colored), carpenter; Reese Evans, stone-cutter; Frank Renshaw, grocer; John B. Sheriff, truck farmer; John H. Vernon, restaurant-keeper; Jackson Howard (colored), hotel fireman; Mason Lowery, laborer; D. C. Green, real-estate broker; Michael Horgan, blacksmith; Edward C. Gill, dealer in paints and oils.

Mr. Bliss, for the Government, proceeded at once to open the case. His address was finished on the 19th, and Mr. Chandler began the opening for the defense, which was continued by Mr. Ingersoll on the 21st and 22d. The taking of testimony was not begun until January, 1883.

STEVENS, Right Rev. WILLIAM BACON, D. D., LL. D., Bishop of the Diocese of Pennsylvania, born in Bath, Me., July 13, 1815.

WILLIAM BACON STEVENS, D. D., LL. D.

Having lost his father in early life, he spent his youth in Boston, Mass., and entered upon a course of study at Philips Academy, with reference to preparation for the ministry. In

consequence of impaired health he gave up for a time his studies in this line, and turned his attention to the science of medicine. Soon after, he took a long sea-voyage, and while in China he prosecuted medical studies, also aiding Dr. Parker, then in charge of the American Hospital in Canton. On his return home he was graduated, in 1837, M. D. at Dartmouth College. Two or three years later he settled in Savannah for the practice of medicine, and soon after was appointed historian of the State of Georgia, in the discharge of the duties of which position he published "A History of Georgia, from its First Discovery to the Adoption of the Federal Constitution in 1797," two vols., 8vo. Having completed his preparations for orders, he was ordained to the ministry in the Protestant Episcopal Church in 1843, and the next year became Professor of Belles-Lettres and Moral Philosophy in the University of Georgia. In 1848 he was called to the rectorship of St. Andrew's Church, Philadelphia, a position which he filled with great usefulness until his election in 1861, and his consecration, January 2, 1862, as Assistant Bishop of Pennsylvania. On the death of Bishop A. Potter he became bishop of the diocese in July, 1865, and has ever since been busily occupied in the duties of his station. For several years he was in charge of the American Episcopal churches on the Continent of Europe, and in 1878 he attended the Lambeth Conference and preached the closing sermon in St. Paul's Cathedral. Bishop Stevens has published a number of works, in addition to his "History of Georgia"—viz., "The Parables of the New Testament practically Unfolded" (1855), "The Lord's Day, its Obligations and Blessings" (1857), "The Past and Present of St. Andrew's" (1858), "A Charge to the Clergy" (1864), besides numerous single sermons, tracts, etc.

SWEDEN AND NORWAY, two monarchies of Northern Europe, united August 15, 1815. The Constitution of Sweden consists of the law of 1809 on the form of government, the law of succession of 1810, the law of 1812 on the liberty of the press, and the amended statute on the formation of the Diet adopted June 22, 1866. The King must be a member of the Lutheran Church. He has the right to declare war and conclude treaties, and possesses legislative powers in matters of political administration. All other laws are made by the Diet, but must have the assent of the crown. The Diet consists of two Houses, both elective. The First Chamber consists of 187 members, one to every 30,000 inhabitants, chosen for the period of nine years by 25 provincial assemblies and the municipal corporations of Stockholm, Göteborg, Malmö, and Norrköping. The Second Chamber consists of 204 members, elected directly for three years, in the proportion of one member for every 10,000 inhabitants in the towns, and for every rural district of under 40,000 inhabitants, and two for rural districts of more than 40,000 inhab-

itants. The franchise is limited by a property qualification. The executive power is exercised by the King under the advice of a Council of State, consisting of ten members.

The Constitution of Norway, established November 4, 1814, vests the legislative authority in the Storting. The Storting is elected indirectly for three years. Vacancies are filled by the persons receiving the second largest number of votes at the triennial election. The number of members is 114. The King has command of the military and naval forces, and makes all appointments, but must nominate Norwegians. He can veto any measure not of a constitutional character, but if it is passed by three different Storthings it can not be vetoed a third time. The members of the Storting divide themselves into two Houses—the Lagthing, consisting of one fourth of the members, and the Odelsting, composed of the other three fourths. Bills originate in the latter body, and may be rejected by the other, unless the Odelsting calls for a joint sitting, in which case a two-thirds majority of the whole Storting is necessary to enact the measure. The Storting may resolve itself into a court for the impeachment and trial of Ministers, Judges of the Supreme Court, or members of the Storting. Articles of impeachment are passed by the Odelsting, and are tried by the Lagsting and Supreme Court, sitting together. The executive power is exercised by the King through a Council of State, composed of two Ministers and nine Councilors. One of the Ministers and two Councilors reside at Stockholm with the King.

The King of the two monarchies is Oscar II, Fredrik, born January 21, 1829, who succeeded his brother, Carl XV, September 18, 1872. He is the fourth sovereign of the line of Ponte Corvo, which originated with Bernadotte, one of Napoleon's marshals, who was elected Swedish heir-apparent in 1810, and ascended the throne, under the name of Carl XIV Johan, in 1818. The heir-apparent is Oscar Gustaf Adolf, son of the King, born June 16, 1858.

The Swedish Cabinet is composed of the following members: Minister of State, Count Arvid Rutger F. Posse, appointed April 19, 1880; Minister of Foreign Affairs, Baron Carl F. L. Hochschild, appointed April 27, 1880; Dr. Johan H. Lovén, appointed Councilor June 5, 1874; Dr. Nils H. Vult von Steyern, Councilor and Chief of the Department of Justice, appointed April 18, 1880; Baron Carl Gustaf von Otter, Councilor and Chief of the Department of the Navy, appointed April 18, 1880; Fredrik L. S. Hederstierna, Councilor at the head of the Interior Department, appointed April 18, 1880; Dr. Carl Gustaf Hammarskjöld, Councilor in charge of the Department of Ecclesiastical Affairs, appointed August 27, 1880; Councilor Johan C. E. Richert, appointed August 27, 1880; Councilor O. R. Themptander, of the Department of Finance, appointed March 8, 1881; K. A. Ryding, Coun-

cilor in charge of the War Department, who succeeded Otto F. Taube June 16, 1882.

The Norwegian Council of State is composed of the following members: Minister of State, residing at Christiania, Christian A. Selmer, appointed November 1, 1880; Councilor at the head of the Navy and Post-Office Department, Rear-Admiral Jacob Lerche Johansen, appointed June 17, 1872; Councilor in charge of the Department of Justice and Police, J. Helmboe; Councilor in charge of the War Department, Major-General Adolf Frederik Munthe, appointed October 19, 1877; Councilor at the head of the Interior Department, Christian Jensen, appointed October 13, 1879; Councilor in charge of the Department of the Revision of Public Accounts, Dr. O. A. Bachke, appointed October 13, 1879; Councilor in charge of the Department of Education and Ecclesiastical Affairs, N. C. E. Herzberg, who succeeded Jens Helmboe, transferred to the Department of Justice January 30, 1882; Minister of State residing near the King, Otto R. Kiernulf, appointed November 1, 1871; Councilors of the Delegation at Stockholm in 1882, N. Vogt, appointed Councilor May 13, 1871, and C. H. Schweigaard, December 22, 1880.

SWEDEN.—AREA AND POPULATION.—The area of the kingdom is 170,979 square miles, 3,517 of which are covered by the Lakes of Vener, Vetter, Mälär, and Hjelmar. The area, in square kilometres, and population of the Län, or provinces, according to the decennial census of December 31, 1880, were as follow:

LAN.	Area.	Population.
Stockholm, city.....	7,649 }	168,775
Stockholm, district.....		147,021
Upsala.....	5,313	111,019
Södermanland.....	6,341	147,186
Ostergötland.....	10,977	267,183
Jönköping.....	11,574	196,271
Kronoberg.....	9,997	169,736
Calmar.....	11,498	245,105
Göthland.....	8,152	64,668
Blekinge.....	3,010	137,477
Christianstad.....	6,511	220,619
Malmöhus.....	4,795	349,810
Halland.....	4,913	335,299
Göteborg and Bohus.....	5,101	261,114
Elfsborg.....	12,825	258,947

Gefleborg.....	19,515	178,728
Westernorrland.....	25,046	169,195
Jemtland.....	52,218	63,628
Westerbotten.....	59,693	106,435
Norrbotten.....	106,818	90,761
Total.....	440,997	4,565,668

The population was divided into 2,215,243 males and 2,350,425 females. In 1870 there were 3,809 Baptists, Mormons, and Methodists; 190 Reformed, 573 Roman Catholics, 30 Greek Catholics, and 1,836 Israelites; the rest of the population belonged to the established Lutheran Church. There were 6,711 Lapps and 14,932 Finns, born in Sweden, and 12,015 foreigners, principally Germans, Danes, Norwegians,

and Finlanders. The population of the kingdom, according to the annual enumeration made December 31, 1881, was 4,572,245. The number of marriages in 1880 was 28,919, of births 138,303, of deaths 86,794; excess of births over deaths, 51,509.

The mean annual emigration between 1850 and 1860 was 1,690; between 1860 and 1870, 12,245; in the year 1870, 29,003; 1871, 17,450; 1872, 15,915; 1873, 13,580; 1874, 7,791; 1875, 9,727; 1876, 9,418; 1877, 7,610; 1878, 9,032; 1879, 17,637; 1880, 42,109.

The cities containing over 25,000 inhabitants in 1881 were: Stockholm, 176,745; Gothenburg, 78,313; Malmö, 39,512; Norrköping, 27,231.

COMMERCE.—The exports and imports both more than doubled between 1870 and 1880. The chief exports are timber, pig-iron, and grain. The largest imports are textile manufactures, coal, and colonial produce. The total imports in 1880 were valued at 282,788,000 crowns, against 226,442,000 in 1879, having grown from 82,469,000 crowns in 1860; the total exports at 236,643,000 crowns, against 186,164,000 crowns in 1879, and 86,496,000 crowns in 1860. The extent of the commerce with the principal foreign countries was as follows, in crowns, in 1880:

COUNTRIES.	Imports.	Exports.
Great Britain.....	77,743,600	122,810,000
Denmark.....	55,848,000	22,991,000
Germany.....	61,764,000	17,096,000
France.....	6,467,000	28,699,000
Norway.....	16,774,000	7,955,000
Belgium.....	8,705,000	12,268,000
Russia.....	17,454,000	2,012,000
Netherlands.....	8,384,000	6,139,000
United States.....	11,770,000	2,869,000
Finland.....	8,778,000	5,089,000

Of 9,618 laden vessels, of 1,513,395 tons, entering Swedish ports in 1880, 5,216, of 762,442 tons, bore the Swedish flag; 647, of 123,456 tons, the Norwegian; and 3,755, of 627,497 tons, were foreign vessels. The merchant navy consisted, in 1880, of 2,252 vessels, of 105,062 tons, including 607 steamers, of 31,509 tons, engaged in domestic commerce, and 2,133 vessels, of 455,631 tons, including 165 steamers, of 55,089 tons, trading abroad.

There were 3,860 miles of railroad in operation at the commencement of 1882, of which 1,370 miles belonged to the state and 2,490 miles to companies.

The number of post-offices in 1880 was 1,785. There were 38,078,616 letters and postal-cards, 3,699,789 printed inclosures, and 26,952,716 newspapers forwarded in 1881; together 68,731,121, against 63,709,363 in 1880.

The length of telegraph lines in 1881 was 5,225 miles; length of wires, 12,795 miles. The number of dispatches sent was 1,118,081, comprising 591,276 domestic, 398,534 international, and 128,271 in transit. The receipts were 1,304,495, the expenses 1,205,966 crowns.

ARMY AND NAVY.—There are five different

classes of soldiers. The enrolled troops (Värfvade) and the cantoned troops (Indelta) form together the regular army. The first are recruited by enlistment. The latter class receive, partly from private landholders and partly from the crown domains, a house and parcel of land, and annual pay in money or in kind. The third class is the conscripted troops (Beväring), in which every able-bodied young man is enrolled; but only a part of them are instructed. There are besides two special bodies, the Gotland militia, which is not obliged to serve outside of the island, and the volunteer rifle association, which numbered 11,065 men in 1881. The regular army in 1882 numbered 35,106 men, exclusive of officers. The enrolled troops numbered 2,230 infantry, 1,066 cavalry, 4,343 artillery, and 894 engineers, together 8,533 men; the cantoned troops, 23,016 infantry and 3,557 cavalry, together 26,573 men. The strength of the conscripted army was 135,337; of the Gotland militia, 7,762.

The navy consisted, in 1882, of forty-four steamers, with 155 guns, including one line-of-battle ship, one frigate, four corvettes, four monitors, ten small monitors, two torpedo-boats, and nineteen gunboats. The four monitors and ten of the gunboats were ironclads. There were besides five sailing-corvettes and five brigs, carrying 105 guns.

FINANCES.—The budget for 1883 makes the total ordinary receipts 20,590,000 crowns (by a treaty signed May 27, 1873, and the supplementary treaty of October 16, 1875, Sweden, Norway, and Denmark adopted a common decimal monetary system: the Swedish krona, Norwegian and Danish krone, is equivalent to 26·8 cents), derived from the land-tax (5,995,000 crowns), domain farms (2,900,000 crowns), capitation tax (640,000 crowns), tonnage dues (1,200,000 crowns), net railway receipts (6,200,000 crowns), gross telegraph receipts (1,330,000 crowns), gross receipts from forests (1,000,000 crowns), and miscellaneous sources (1,325,000 crowns); the total extraordinary receipts, 53,770,000 crowns, derived from customs duties (27,500,000 crowns), postal receipts (5,100,000 crowns), stamps (3,000,000 crowns), spirit-tax (17,000,000 crowns), beet-sugar impost (70,000 crowns), and income-tax (4,100,000 crowns); the net receipts of the Bank of Sweden, 1,600,000 crowns; unexpended balance, 2,789,137 crowns; total receipts of the Treasury, 78,749,137 crowns. The ordinary expenditures are fixed at 58,536,711 crowns: 1,338,000 for the royal household, 3,753,000 for the Department of Justice, 613,800 for that of Foreign Affairs, 17,205,000 for that of the Army, 5,375,000 for the Navy Department, 4,396,360 for that of the Interior, 10,132,551 for that of Education and Worship, 2,430,000 for pensions, and 13,293,000 for financial administration. The extraordinary expenditures are placed at 7,827,589 crowns: 2,413,000 for the army and navy, and 5,414,589 for other purposes. The expenditures on account of the

public debt are set down as 10,187,932, and the balance to be carried over as 2,196,905 crowns, which makes the budget of expenditures balance the total receipts. The army and the ecclesiastical establishment are maintained mainly from the produce of the domainial estates, which are not entered in the budget, nor are the 304,700 crowns contributed for foreign affairs by Norway. The cost of education is defrayed in great part out of the communal and provincial revenues.

The public debt of Sweden was contracted entirely for the construction of railroads. The total amount outstanding on January 1, 1882, was 234,715,896 crowns. Of this 34,843,500 consisted of the internal loans of 1870 and 1872, at 5 and 4 per cent interest respectively; 190,872,396 crowns was the amount of the foreign loans contracted at 4½ and 5, and latterly at 4 per cent interest, in England, Germany, and France, the last of which was raised in 1880, and amounts to 70,785,000 crowns; and 9,000,000 crowns constitute an unfunded loan of 1879, repayable before November 1, 1885.

LEGISLATION.—The Swedish Diet separated May 22d, after a session of four months' duration. The great questions of the regulation of the land-tax and the reorganization of the army have been before the country many years. A number of ministries have been shipwrecked in the effort to effect these reforms, which are intimately connected with one another. The present ministry proceeds more cautiously with the army reform. The development of a military force upon modern models of the most modest proportions would require a considerable augmentation of the revenue, of which there is no prospect. The present organization is sufficient to permit a military demonstration with 20,000 men, which will meet every requirement, as Sweden has little to fear from its neighbors. The military and naval items in the budget were voted, with the exception of that for continuing the fortifications at Carlsborg, which was considerably reduced. The more important subject of the readjustment of the land-taxes, which press very unequally upon the small owners, is dealt with only in vague promises. The Posse Ministry is a business Cabinet, which offers no political programme. It commands no firm majority in the Diet, but in its conservative course, while the resources of the country are slowly developing, it obtains a support from all parties, though the rural party, from which the Prime Minister came himself, opposes many of his financial measures as extravagant. The committee on the national defense developed a plan in December, by which the regular army would be increased to 25,000 men, and a reserve maintained which would furnish a total war effective of about 75,000 men for the field army. The Diet rejected by a considerable majority the proposition to introduce corn duties. A resolution in favor of extending the right of suffrage was passed by a decided ma-

jority in the Second Chamber, but was rejected by the First Chamber.

NORWAY.—AREA AND POPULATION.—The area of Norway is 122,869 square miles. The total population, according to the last decennial census, taken December 31, 1875, was 1,806,900, divided into 876,762 males and 930,138 females. The town population was 326,420; rural population, 1,480,480. The population in 1880 was estimated at 1,913,500. The number of marriages in 1880 was 12,585; of births, 58,862; of deaths, 30,532; excess of births, 28,330. Besides the Norwegians proper, there were, in 1875, 7,594 Finns, 14,645 settled Lapps, 1,073 nomad Lapps, and 8,396 of mixed blood. The number of foreign-born residents was 37,350, of whom 29,340 were Swedes, and the rest chiefly Finlanders, Danes, and Germans. Besides the adherents of the state Church, there were 2,759 Methodists, 1,184 Reformed Lutherans, 819 Baptists, 542 Mormons, 502 Roman Catholics, 432 Quakers, and 1,000 of other denominations. The following cities contained over 20,000 inhabitants; Christiania, 76,054; Bergen, 34,388; Trondhjem, 22,544; Stavanger, 20,288. The emigration for the last ten years, reported, was as follows: 1871, 12,276; 1872, 13,865; 1873, 10,352; 1874, 4,601; 1875, 4,048; 1876, 4,355; 1877, 3,206; 1878, 4,863; 1879, 7,608; 1880, 20,212.

COMMERCE.—The average value of the total imports in the years 1876-80 was 161,300,000 crowns; of the exports, 102,300,000 crowns. The staple exports are timber and wood, fish, and, in smaller quantities, pig-iron and copper-ore. The total imports in 1881 amounted to 164,997,000 crowns; in 1880, 150,871,000 crowns. Total exports in 1881, 120,934,000 crowns; in 1880, 108,739,000 crowns. The largest trade in 1881 was with the following countries:

COUNTRIES.	Imports.	Exports.
Great Britain .....	42,876,000	40,886,000
Germany .....	45,225,000	16,460,000
Sweden .....	15,281,000	13,823,000
Denmark .....	20,251,000	6,556,000
France .....	9,740,000	8,302,000
Russia .....	9,979,000	6,197,000
Spain .....	2,953,000	12,391,000
Holland .....	6,624,000	7,800,000

The imports from the United States in 1881 were 2,929,000 crowns in value, and the exports to the United States 62,000 crowns.

The number of arrivals in Norwegian ports in 1880 was 11,556 vessels, of 1,971,209 aggregate tonnage, of which 6,703 vessels, of 1,337,294 tons, were Norwegian, and 5,688, of 982,096, or less than half, with cargoes. Norway has the largest merchant fleet, in proportion to her population, of any country. The number of vessels at the end of 1880 was 8,095, against 6,993 in 1870; the aggregate registered tonnage, 1,518,658, against 1,007,908; the number of sailors employed, 60,832, against 49,337.

The steam fleet consists of 334 vessels, of an aggregate tonnage of 58,062 tons.

The length of railroad lines in operation at the end of 1882 was 950 miles.

The telegraphs, as in Sweden, belong to the state. The length of the lines at the end of 1881 was 4,705 miles; of wires, 8,550 miles. The number of internal dispatches was 498,024; received from abroad, 188,731; sent abroad, 160,433; in transit, 24; total, 847,212. The receipts were 967,608 crowns; expenses, 965,431 crowns. There were besides 725 miles of railroad lines, with 1,455 miles of wire.

The number of post-offices in 1881 was 938. The number of letters forwarded was 11,013,340 domestic, and 15,544,789 including the foreign; the number of newspapers, 12,465,530. The receipts amounted to 1,804,070 crowns, the expenses to 1,852,728 crowns.

**ARMY AND NAVY.**—By the laws of 1866 and 1876, the military forces are divided into the line troops, the *landværn* or militia, the train, and the landstorm or final levy in mass. The army of the line numbers 750 officers and 18,000 men, which number can not be exceeded even in war-time, without the assent of the Storting. It is raised principally by conscription. The *landværn* is not liable to service beyond the borders.

The naval forces are recruited mainly by enlistment, but in default of volunteers are completed by conscription among the sailors. The navy consisted in July, 1882, of thirty-seven steamers, carrying 152 guns, including four iron-clad monitors, two frigates, two corvettes, a ram, and twenty-eight gunboats of different classes.

**FINANCES.**—The ordinary receipts of the Treasury amounted in the year ending June 30, 1881, to 34,618,100 crowns. The extraordinary receipts, consisting of loans and local contributions for the construction of railroads, raised the total receipts of the Treasury to 41,630,000 crowns. The gross revenue from customs was 15,858,100 crowns; from the liquor-tax, 3,500,800; from the malt-tax, 2,251,000; from railroads, 3,671,000; from posts, 1,713,600; from mines and domains, 1,128,600. The heads of expenditure were: 9,394,700 crowns for financial administration; 6,580,100 for the army; 6,377,900 for the navy, posts, and telegraphs; 4,981,300 for the Interior Department, including the operation of the railroads; 4,111,600 for justice, police, and sanitary service; 2,970,200 for the university and other expenses of the Department of Instruction and Worship (not including about 1,000,000 crowns derived from special funds); 1,141,300 for the Council of State and Ministries; 408,500 for the Storting; 435,400 for the civil list and appanages; 499,700 for foreign affairs; and 94,500 for incidental expenses. The outlay of 6,234,400 crowns on railroads brings the total expenditures up to 43,681,800 crowns.

The total amount of the public debt outstanding on June 30, 1881, was 104,512,000

crowns, all bearing 4½ per cent interest, except a loan contracted in 1880 at 4 per cent. Against the debt the Government holds assets which nearly offset the entire amount. These consist of productive funds, administered by the Department of Finance, amounting to 29,700,000 crowns, cash and credits amounting to 5,200,000 crowns, and railroad shares to the amount of 62,900,000 crowns—together, 97,800,000 crowns.

**POLITICS AND LEGISLATION.**—The republican movement in Norway assumed during the year 1882 larger proportions than at any previous time, the struggle between the King on the one side and the Storting or national Parliament on the other culminating in a rebuke of the former. The union of Sweden and Norway dates back to 1814, when King Charles XIII received Norway from the allies as the price of his assistance in the war against Napoleon. According to the Constitution of Eidsvold, adopted November 4, 1814, Norway was declared "free, independent, indivisible, and inalienable." This Constitution gave to the country a form of government virtually republican. Under a monarchical form, Norway is really a republic of peasants, in which the aristocracy of other monarchies is represented by a strong peasantry. The King can not dissolve the Storting until it has been in session three months; and, though he may veto a measure, his veto may be overruled by the action of three successive Storthings. Its foreign representation is united with that of Sweden, but its army is not, the Constitution providing expressly that Norwegian troops are not to be taken out of the country without the consent of the Storting, while the same consent is necessary to bring Swedish or foreign troops into Norway. Conflicts between the King and the Storting occurred almost from the very time of the union. King Charles John XIV, who ascended the throne in 1818, made many unavailing attempts to reduce the country to closer submission to royal authority. The present conflict began in 1872, when the Storting carried by a vote of 80 to 29 a bill inviting the ministers to be present at the meetings of the Storting as is the case in other constitutional countries. The King refused his sanction to this bill, but it was passed by two successive Storthings, and had, therefore, as its friends claimed, become a law.

But the King again refused his sanction, and a new struggle arose on the nature of the King's veto. On June 9, 1881, the Storting declared the bill, thrice carried by the legal majority, to be valid law in the kingdom of Norway. The resolution was met by a firm protest from the crown. The crown's claim for an absolute veto has been pushed further. Lately it was employed to frustrate the permanent sitting, the Storting's appointment of a parliamentary committee, and even some of its financial bills. The other reforms of the liberal programme—such as the introduction of

juries, a reasonable extension of the right of suffrage, a reorganization of the army on the model of the Swiss system of militia—are all met by an unyielding resistance on the part of the Government, and as little regard is paid by the Peasant party to guarantees claimed by the crown. The political excitement during the preparations for the new elections was very intense. A speech of the poet Björnsterne Björnson, one of the leaders of the Peasant party, clearly shows the ideas entertained by this party. He said: "If any one, even were he a minister, should say that royalty can not do without the veto, we would have to answer most emphatically, that in such a case the Norwegian people would have to give up royalty. The issue of this election can be nothing less than the veto or royalty." The new elections returned to the Storting a more formidable majority of the Peasant party than ever, and in the new Storting, which meets in February, 1883, all the means placed in their hands by the Constitution will be used by them to maintain their will. The proposition to increase the appanage of the Crown Prince, on the occasion of his marriage, was rejected for the second time in June. A new commercial treaty was concluded with France, which went into force May 15th. The duties on artificial flowers, silk fabrics, gloves, watches, wine, and on feathers, sardines, and anchovies, were considerably lowered.

SWITZERLAND, a federal republic in Central Europe. A closer union was formed under the fundamental laws adopted in 1848, and the Constitution of April 19, 1874. The legislative and executive authority of the confederacy is vested in the State Council, or *Ständerath*, composed of 44 members, chosen by the twenty-two cantons, two for each canton, and the National Council or *Nationalrath*, chosen by direct election at the rate of one member for every 20,000 inhabitants. Every male citizen over twenty years of age is a voter. Clergymen are not eligible. Both Chambers united form the National Assembly. The executive authority is delegated to the *Bundesrath*, or Federal Council, consisting of seven members, chosen for three years by the Federal Assembly. The President and Vice-President of the Federal Council are elected by the Federal Assembly for the term of one year, and are not eligible for the next consecutive term. The seven members of the Council preside each one over a separate department of the administration. The *Bundesgericht*, or Federal Tribunal, decides upon questions in dispute between the cantons among themselves, or with the Federal Government. It consists of 11 members, elected for six years by the Federal Assembly. The Federal Tribunal is also the court of final resort for all cases. The Federal Assembly sits at Bern, the Federal Tribunal at Lausanne.

The cantons have their local government, based upon the principle of the direct sov-

eighty of the people. In the smaller cantons, as in Appenzell, Glarus, Unterwalden, and Uri, the laws are passed by the full vote of the citizens, meeting at stated periods in open-air assemblies. In others the acts of the legislative bodies are submitted to the people for confirmation or rejection. In the more populous cantons the legislative authority is delegated to the Cantonal Great Council, chosen by universal suffrage.

The acts of the Cantonal Councils and of the Federal Assembly are subject to the veto of the people, when a *referendum* or reference to the popular vote is demanded by a certain number. Federal laws are submitted to the popular vote when demanded by 30,000 citizens, or by eight cantons.

The President of the Federal Council for 1882 was S. Bavier, of the canton of Grisons; the Vice-President was L. Ruchonnet, of the canton of Vaud. The members of the Council and their departments were as follow: Politics, S. Bavier, the President; Interior, Dr. K. Schenck, of the canton of Bern; Justice and Police, L. Ruchonnet, the Vice-President; Military Affairs, F. W. Hertenstein, of the canton of Zürich; Finance and Customs, B. Hammer, of the canton of Soleure; Commerce and Agriculture, N. Droz, of the canton of Neuchâtel; Posts and Railways, Dr. E. Welti, of the canton of Aargau.

AREA AND POPULATION.—The population of Switzerland, as determined by the census of December 1, 1880, was 2,846,102, divided into 1,394,626 males and 1,451,476 females. The area in square kilometres, and the population of each of the cantons and half-cantons into which the confederacy is divided, with the number of Protestants and Roman Catholics in each, and of persons speaking the German, French, and Italian languages, are shown in the table on the following page.

The number speaking the Roumansch language is 38,705, of whom 37,794 live in Graubünden. There were 6,675 speaking other languages than those enumerated. The number of foreigners returned was 211,035, of whom 95,253 were Germans, 53,653 French, 41,530 Italians, 12,859 Austrians, 2,812 British, 1,285 Russians and Poles, and 1,111 Americans. The number of Israelites was 7,373; of persons of other faiths than the above, 10,838. The number of marriages in 1881 was 19,425; of births, 88,503; of deaths, 67,341; excess of births, 21,162.

The population live mostly in small towns and villages. The only towns with over 25,000 inhabitants, in 1880, were the following: Geneva, 68,320; Basel, 61,399; Bern, 44,087; Lausanne, 30,179; Zürich, 25,102. Geneva is the seat of the watch and jewelry industry, and Basel, of silk and other manufactures. The soil is very equally divided, there being but half a million of the two and a half million inhabitants of Switzerland who possess no property or heritage in land. Of every 100

square miles 20 are pasture-land, 17 forest, 11 arable, 20 meadow, 1 vineyard, and 30 uncultivated, including lakes, mountains, and rivers.

Emigration was formerly considerable. It declined for several years, but has recently assumed larger proportions than ever, owing to the stringency of the military service, and the agricultural attractions of the United States. Between 1868 and 1875 the average annual emigration was 5,170. In 1876 the number of emigrants was 1,741; in 1877, 1,691; 2,608, in 1878; 4,257, in 1879; 7,255, in 1880; and in 1881, 10,935. Of the latter number 9,996 emigrated to North America.

COMMERCE.—The value of the exports and imports is not published by the custom-house authorities. All merchandise is classified under the heads of goods taxed by weight, *ad valorem* goods, or live-stock. The imports consist chiefly of articles of food; the exports of cotton and silk manufactures, watches, straw hats, and machinery. The importation of live-stock, in 1881, was 254,997 head, the exportation, 106,296. Nearly all other articles are measured in quintals. The commerce with the adjacent countries in the classes of goods taxed by the quintal was, in 1881, as follows, in metric quintals, of 220 pounds avoirdupois:

COUNTRIES.	Imports.	Exports.
France.....	6,148,414	959,895
Germany.....	11,208,579	1,187,501
Austria.....	1,708,571	248,197
Italy.....	859,727	219,090

The principal exports in 1879 consisted of 84,000 quintals of silk fabrics, 347,280 of cotton manufactures, 1,532 of watches, and 106,193 of machinery, besides the exports of cheese and other articles of food.

The railroads open to traffic in the beginning of 1881 had a length of 1,600 miles, or over one mile to every ten square miles of surface.

There were thirteen companies. The total

capital invested was 962,165,525 francs; the cost of construction, 747,350,802 francs; the number of passengers conveyed in 1880, 21,608,581; merchandise transported, 5,817,008 tons; receipts, 60,020,371 francs, of which 23,880,719 was from passengers and 31,706,747 from freight; operating expenses, 31,497,203 francs.

The length of the state telegraph lines at the beginning of 1882 was 4,140 miles; of wires, 10,100 miles. The number of domestic messages was 1,837,385; of international, 879,727; dispatched and received, in transit, 329,798; official, 83,079; total, 3,129,989. The receipts were 2,453,972 francs; the expenses, 1,963,666 francs.

The number of post-offices in 1881 was 803; the number of letters carried, 80,751,538, of which 24,530,310 were foreign; the number of newspapers sent from Switzerland and Germany, 51,472,806; arrived from Germany and Austria, 1,171,913; number of passengers on postal coaches, 829,269; receipts, 15,998,837 francs; expenditures, 13,964,554 francs.

The most remarkable feature of the Swiss post-office is the large amounts of money it transfers in money orders, and the numbers of packages and boxes it forwards. The money orders in 1881 amounted to over 240,000,000 francs. There were about 12,500,000 small parcels received and delivered within the limits of the Confederation, and 11,000,000 received from or forwarded to foreign countries. There were, moreover, 6,806,901 boxes and large packages distributed.

According to the returns of the Universal Postal Union at Bern, the countries constituting the Union received and dispatched 3,866,000,000 letters, 649,000,000 ordinary postal-cards, 1,000,000 postal-cards with answers prepaid, 1,983,000,000 newspapers, 1,098,000,000 printed inclosures, 64,000,000 samples, and 98,000,000 small parcels. The amount of money paid in post-office orders aggregated

over \$1,600,000,000. There were 3,418,000,000 letters delivered in Europe; 1,246,000,000 in America; 75,000,000 in Asia; 36,000,000 in Australia, and 11,000,000 in Africa, making 3·5 letters for every inhabitant of the earth, according to the returns of the Postal Union, and those of countries not yet forming a part of the Union.

**ARMY.**—The Federal army is composed of the regular army (*Bundesanzug*), to which all are liable between the ages of twenty and thirty-two, and the reserve (*Landwehr*), which comprises all the male citizens between thirty-three and forty-four years of age. The strength of the regular army on the 1st of January, 1882, was 115,754; of the reserve, 92,178 men; together, 208,216 men.

**FINANCES.**—The total receipts of the Federal Treasury, in 1881, were 43,383,026 francs, of which 655,568 were derived from public property, 214,708 from capital at interest, 17,436,496 from customs, 15,998,837 from posts, 2,496,039 from telegraphs, 1,274,084 from the mint, 1,705,981 from the military administration, principally the half of the military tax accruing to the Federal Treasury, 3,243,378 from the Federal laboratory, powder-factory, and other monopolies, and 357,935 from other sources. The total disbursements were 42,717,493 francs, of which 1,870,583 were for interest and repayments, 816,522 for the general cost of the Government, 4,845,603 for the departments, 12,614,971 for the army, 14,129,741 for the post-office, and 8,440,073 for the telegraphs, mint, laboratory, and other purposes.

The budget for 1882 makes the total receipts 41,929,000 francs, and the total expenditures 42,294,000 francs.

The combined net receipts and expenditures of the cantons and those of the Federal Government, for 1876, are shown in the following summary, giving the amounts in francs:

NET RECEIPTS.	Cantons.	Confederation.	Total.
Forests .....	2,061,518		2,061,518

The debt of the Confederation amounted on the 31st of December, 1881, to 36,947,044 francs, and the assets to 52,939,752 francs. The aggregate cantonal debts, in 1877, amounted to 252,793,373 francs, and the aggregate assets to 456,267,202 francs. All of the twenty-five cantons and half-cantons except seven had assets in excess of their liabilities. The excess in both Bern and Zürich was over fifty million, and in Aargau over twenty-five million francs.

A new commercial treaty was concluded with France, after some delay, owing to the demands of the French protectionists. The trade with France is large and important, especially to the Swiss dairy interest. The exports of Swiss cheese to France rose from 600,000 francs in 1856 to 8,500,000 francs in 1881, corresponding to a weight of 55,000 metric quintals. Conventions were arranged with France also on the subjects of the residence of the citizens of one country in the other, and the protection of literary and artistic property, and of trade-marks. The opening of the St. Gothard Tunnel and the project of a new Franco-Swiss railroad are described elsewhere.

**FOREIGN RELATIONS.**—The Swiss Government, which took the lead in furthering the Postal Union, the Red-Cross Association, and similar humane and utilitarian international projects, proposed in 1882 two new subjects for international agreement. One was a common basis of factory legislation. This was rejected by the various governments—by the German, because factory laws were considered a matter of internal moment; by the French, because it did not wish to be bound in this question by international regulations; by the British, on the ground of the unequal industrial conditions of different countries; and by the Austrian and Italian, because the basis of common legislation was not elucidated in the proposal of the Federal Council. The second proposition was for an international standard of fineness for the precious metals, and reciprocal recognition of the official inspection of each country. This was rejected by all the European governments.

**POLITICS AND LEGISLATION.**—The elections of November, 1881, gave the Radical party a majority in the National Council. This party, opposed by the aristocratic and clerical elements in the French and Italian cantons and by the German party in German Switzerland, does not represent an absolute majority of the nation. In consequence, the right of the *referendum* was exercised in 1882, to an extent which makes the efforts of the last generation to establish a national government in the place of the former loose confederation of semi-independent states appear fruitless, and the National Assembly a useless institution, since its decisions are always overturned by the *plébiscite*. The most important question which has exercised Switzerland in recent times is that of national defense. It was the growth

of enormous armaments in the great nations contiguous to Switzerland which first impelled her people to determine upon a real national union in 1848, which remained an empty declaration until the adoption of the Constitution of 1874. The preservation of the popular veto as a safeguard against excessive centralization, and as embodying the Swiss principle of popular sovereignty manifested in its primitive form in the *Landsgemeinden* of the small cantons where the whole body of the people deliberates upon the laws, entirely frustrates the intentions of the Constitution, when exercised as in 1882 to annul the laws of the national Government simply because they emanate from central authorities. A scheme for national fortifications was elaborated by a commission of experts. Its main points were suggested by Colonel Frei, of Basel, who in 1882 received the appointment of Minister to Washington. Colonel Frei is specially fitted for his present post, as he formerly resided in the United States, and fought on the side of the North in the American war. He was taken prisoner and was confined in Andersonville Prison, where he came in contact with the notorious keeper, Wirtz, also a Switzer, from Zürich. The projected fortifications were to be erected on the French frontier, where roads, railroads, and fortresses have been erected by the French Government in recent years, presumably for the purpose of an inroad into Germany through Switzerland, in the case of another German war. The objections to the plans of the military engineers were not merely the cost, but the suspicions of France which they implied,

to which country the Radical-Liberal party is bound by sympathetic ties. The fortification project is consequently postponed.

The rejection by a *plébiscite* of a reform in the military service law indicates the attachment of the Swiss people to their old militia system and their opposition to centralization. Their repugnance to the burdens of a centralized, military state is manifested in the increasing emigration to America, and the yearly decline in the military recruit and in the effective strength of the Federal army. The national Legislature passed in 1882 a law making vaccination compulsory. The anti-vaccinationists, who are more zealous than numerous, obtained the necessary 30,000 names to a memorial demanding a *referendum*. When the question came to a vote, the law was vetoed by a large majority, although in several of the cantons vaccination was already compulsory by acts of the local Legislatures, to the general satisfaction of the people who voted against the national measure.

The question of public education, which agitated all Catholic and in a less degree Protestant countries also, came up for final solution in 1882. The law which was passed by the Nationalrath, introducing compulsory secular education, carries out a provision of the Federal Constitution to that effect. The Catholics and a section of the Protestants demanded a *plébiscite* on this law, and obtained the necessary number of names to the memorial with ease; but the popular vote sustained the act of the Legislature by a large majority.

## T

TAIT, ARCHIBALD CAMPBELL, D. D., D. C. L., Archbishop of Canterbury, and Primate of all England, born in Edinburgh, December 22, 1811, died in London, December 3, 1882. His early education and training were received in the Edinburgh Academy and University of Glasgow. In 1830 he went to Oxford, where he entered Balliol College. His university career was more than ordinarily brilliant and satisfactory. He took the degree of B. A. in 1833, and obtained a first in the school of *Literae Humaniores*. Soon after he was elected Fellow of his college, and in due time became Tutor and Dean, taking his M. A. degree in 1836. He was also appointed select preacher in 1843, and his success as a tutor and lecturer, especially in logic, was far beyond the average. He aided materially in placing Balliol College in the front rank of the colleges at Oxford. His habit of doing all his work in the very best manner and to the extent of his ability, and his practical good sense, fairness, and earnest desire to oblige and benefit all with whom he had dealings, made him numerous friends, whose regard and esteem he never lost. In 1841 he was one of the

"Four Tutors" who publicly protested against Tract No. 90, and the whole system of interpretation of the articles and standards of the Church of England, which John Henry Newman and the Tractarian School were then urging with great power and effect. As Mr. Tait left the university the next year, he took no further active part in this controversy.

In the summer of 1842, by the death of Dr. Arnold, of Rugby, the head-mastership of the school became vacant, and though the candidates for the succession were numerous, and some of them were men of mark and influence, the lot fell upon Tait. His success, in following so popular and so able a man as Arnold, was remarkable, and proved again his good sense and possession of qualities of a high order. In 1843 he was married to Miss Catharine Spooner, daughter of Archdeacon Spooner, a lady who proved in every sense of the word a "helpmeet" to him in his varied career and high positions in the Church. His married life was one of happiness and peace, notwithstanding the severe afflictions which came upon him in the loss of five young daughters by scarlet

fever, at Carlisle, in the spring of 1856, and subsequently of his only son, Crawford, who died, after a lingering illness, in 1878.

The active zeal and diligence of Dr. Tait at Rugby began to tell seriously upon his health and strength, and it was intended to give him an opportunity for rest and recreation that he was appointed to the deanery of Carlisle in 1851. But his principles allowed no such course as cessation from labor; and so diligent

the sum of \$5,000,000. This money was appropriated to the erection of churches, schools, and parsonages in the poorer suburbs of London; above seventy new districts have become separate and endowed parishes; and Scripture readers in large numbers, as well as women devoted to mission work, besides a large accession of working clergy, have done and are doing something, at least, toward supplying the spiritual wants of the masses.

ARCHIBALD CAMPBELL TAIT, D. D., D. C. L.

was he in the discharge of the duties of his office—in preaching, in visiting the poor, in looking after the public charities of the town—that, when a bishop was wanted for the great diocese of London, Dr. Tait was placed in it, in 1856, at the direct suggestion of Queen Victoria. His labors in this new sphere were abundant and unceasing. He felt deeply the need of endeavoring to do something more than had as yet been accomplished for the myriads of the poor in the vast metropolis, and he gave his whole soul to the work. So successfully did he urge upon the wealthy classes their duty in this matter, that, in the course of ten years, the “Bishop of London’s Fund” was raised to

On the death of Archbishop Longley, in 1868, Dr. Tait was appointed his successor. He had been offered the archbishopric of York some years before, but declined this elevation, preferring to remain and carry on the work undertaken in London under his auspices. He was the first Scottish-born Archbishop of Canterbury, and his appointment was due, beyond doubt, mainly to the Queen. The first measure of importance in which he was called upon to take part, in his new position, was that of the disestablishment of the Irish Church, in 1870. The political necessity of this measure he felt and acknowledged, while at the same time he worked with others in striving to secure to the

church people in Ireland all the benefits possible under the changed state of things caused by disestablishment. In 1870 he was relieved of some of his heavy duties by the appointment of Dr. Parry as suffragan Bishop of Dover, and he visited Italy for the benefit of his health. He presided over the Pan-Anglican Synod at Lambeth, in 1867; the Church Congress at Croyden, in 1877; and the Conference of Anglican Bishops in 1878. Mrs. Tait died in 1878, and the effect upon the archbishop was extremely depressing. His chief publications were: "Charges to the Clergy," in the years 1858, 1862, and 1866; "The Dangers and Safeguards of Modern Theology," sermons, etc., in 1861; "The Word of God and Ground of Faith," eleven discourses, 1863, 1864; separate sermons, addresses, etc., at different times, together with articles in the "Edinburgh Review" and "North British Review." His latest publication was "The Church of the Future," a diocesan charge delivered to rural deaneries, in August and September, 1880.

**TARIFF REVISION.** The existence of a large surplus revenue, the consequent tendency to extravagant expenditures, the rapid redemption of Government bonds, which form the basis of the national currency, and a growing conviction that the industrial and commercial interests of the country are oppressed and deranged by heavy taxation, have in the last two years produced a rapidly increasing agitation in favor of a thorough revision of the tariff laws of the United States. The effect was felt at the session of Congress which met in December, 1881, but political sentiment was so divided on the subject that it was evidently impossible to secure agreement on any careful measure of reform. The Republican party had a controlling majority in the House of Representatives, in which revenue measures originate, and, while it had no clearly defined position regarding the tariff, the preponderating sentiment was in favor of preserving, so far as possible, the protective features of the existing law. The Democrats were in a general way pledged to reform, and a tariff for revenue only, but among them there were wide differences of opinion, some being as strongly attached to protective doctrines as any of the opposing party. The need of reducing the revenue was acknowledged on both sides, and the demand for a revision of the tariff was recognized, but there was no chance of agreement on any practical measure. The result of prolonged discussion was the reference of the question of tariff revision to a commission, and an unsuccessful effort to pass a bill to remove or reduce certain of the internal revenue taxes. (See CONGRESS.)

**THE TARIFF COMMISSION.**—The Tariff Commission was to consist of nine persons from civil life, to be appointed by the President, with the advice and consent of the Senate. On the 7th of June the President sent to the Senate for approval and confirmation the names of

William A. Wheeler, of New York; John L. Hayes, of Massachusetts; Henry W. Oliver, Jr., of Pennsylvania; Austin M. Garland, of Illinois; Jacob Ambler, of Ohio; John S. Phelps, of Missouri; Robert P. Porter, of the District of Columbia; John W. H. Underwood, of Georgia; and Duncan F. Kenner, of Louisiana. Mr. Wheeler declined the appointment, and several gentlemen to whom it was offered, including Mr. A. A. Low, of New York, the Hon. Hugh McCulloch, and the Hon. Erastus Corning, refused to accept it. Mr. Phelps, of Missouri, also declined, and the two vacant places were filled on the 16th of June, by the appointment of Alexander R. Boteler, of West Virginia, and William H. McMahon, of New York. The action of Congress in providing for the commission was generally regarded as in the interest of conservative changes in the tariff, and the maintenance of its protective features, so far as practicable consistently with the desired decrease of revenue. This impression was confirmed by the character and position of the men appointed as commissioners. Mr. Hayes, who became chairman of the commission, was closely identified with the interests of growers and manufacturers of wool, was secretary of their national organization, and the publisher of a journal in Boston devoted to their affairs, and had long had a local reputation as an able defender of the protective policy. Mr. Oliver was closely connected with the iron interests of Pennsylvania, being largely interested in two extensive establishments at Pittsburg. Mr. Garland was an extensive sheep-raiser, officially connected with the Wool-Growers' Association, and in favor of protecting the raw materials as well as the manufactured products of the country. Mr. Ambler was a man of considerable experience in public life, having seen both legislative and judicial service in his own State, and represented one of its districts in Congress for two terms. He was a decided protectionist, and his appointment was favored by that interest in Ohio. Robert P. Porter, who became the secretary of the commission, was chiefly known as a statistical writer, and one of the leading workers in the United States Census Bureau. Mr. Underwood was a man of long experience in public life in the South, and understood to be favorable to the policy of building up manufacturing interests in that section with the aid of protection. Mr. Boteler was connected with the Whig party before the civil war, and was regarded as conservative in his views on the tariff. Mr. Kenner was extensively engaged in sugar-planting in Louisiana, and represented the claims of that interest. Mr. McMahon held a prominent position in the New York Custom-House, and was selected on account of his familiarity with the details of the collection of duties, the difficulty in administering the laws, and the general requirements of the customs service. He died before the report of the commission was made, but

not before its work was substantially completed.

The Tariff Commission first came together at the summons of the Secretary of the Treasury, and held a meeting at the Ebbitt House, in Washington, on the 6th of July. It merely organized and considered plans. An address was made to the members by the president, Mr. John L. Hayes, of Massachusetts, in which he said:

You will doubtless agree with me that this commission has no other functions than those provided by laws, and that its essential duties are defined by the third section of the act constituting the commission, which is as follows: "It shall be the duty of the commission to take into consideration all the various questions relating to the agricultural, commercial, mercantile, manufacturing, mining, and industrial interests of the United States, as far as the same may be necessary for the establishment of a judicious tariff, or the revision of the existing tariff laws upon a scale of justice to all interests." It would be improper for me to anticipate the conclusions which should be made by your collective wisdom by any interpretation of my own of the law defining your functions; but I may, perhaps, be allowed to refer to one phrase in the law constituting the commission, which I think you will agree with me should be the key-note of our deliberations. The law declares that the objective point of our labors is the establishment of a judicious tariff, or a revision of the existing tariff laws upon a scale of justice to all interests.

With this end in view, no special industry can have undue advantage; no private interest can be subserved; no duty promoting one industry, yet oppressing another, can be justified, and the relations of the industries to each other, no less than the special necessities of each, must be considered. Moreover, through the conditions of justice to all interests made imperative by the law, the constitutional or theoretical scruples which might have existed as to the original propriety of the existing national tariff policy must be waived. A radical or subversive change in the present general economical policy of the country is virtually interdicted, and a judicious, not a revolutionary tariff—a revision, not a destruction, of existing tariff laws—is declared to be the object to which our labors shall conduce.

I have said that this commission has no other functions than those expressed in the law. But there is a paramount and implied condition in all service to the state, namely, the obligation to regard the interests of the nation, or those all-embracing benefits summed up in the words national prosperity. If, in the definition of the subjects which should receive the consideration of the commission, some are omitted which we can scarcely doubt were intended to be kept in view; if questions of revenue, if the interests of consumers, of science, of literature, and of art, are not specially referred to, they may be all included under the implied obligation resting upon us to consider the interests of the nation as a whole. . . . By making the national interests paramount to those of section, class, or industry, we may also find a solution of many questions of opposite individual or sectional interests, and may avoid many difficulties by remembering, while not unmindful of justice to existing interests, that protective duties should be imposed or withheld, not for the benefit of individuals or special industries, but for the good of the nation. If, through the spirit and methods of our labors, we should be so fortunate as to conduce to the result that sectionalism and partisanship shall sink in the aim for the general good, and the policies and names of protection, free trade, and revenue reform, shall be merged in the broader system and phrase—a national policy—the moral will equal the material benefits of the new economical departure.

Sessions were continued in Washington for several days for the completion of preliminary work, and the hearing of testimony was begun at Long Branch, N. J., on the 19th of July. The commission held its sittings at that place until the 22d of August, twenty-nine days being occupied with its investigations there. The witnesses who appeared before it were for the most part representatives of protected interests, who were anxious for the retention of high duties. The first witness was a chemical manufacturer from Philadelphia, who said that there were 1,549 chemical establishments in the country, with an aggregate capital of \$85,000,000, and annual sales amounting to \$118,000,000, and employing 30,000 people. He was not in favor of reducing duties on manufactured chemicals, but made a suggestion that there should be no tax on raw materials not produced in the country, but should be one on such as are produced in the country, varying in amount according to the importance of the material. Chemical manufacturers, he said, were now independent of Great Britain and the rest of the world, and wished to remain so. His testimony was followed by that of a representative of the Manufacturing Chemists' Association of the United States, who said that they did not object to a revision of the tariff or to reduction of some of the duties. This statement was followed by an argument in favor of restoring a 20 per cent duty on quinine. On the 25th of July the commission adopted the following rules regarding the admission of testimony:

1. Oral testimony shall be confined to statement of facts relating to or affecting some one or more of the subjects which, under the law, are proper to be considered by the commission, except that when the witness is shown to be an expert upon any such subject he may give his opinions as such expert in relation thereto.
2. The witness may, in the first instance, make his statement without inquiry, or in answer to inquiries, as the commission may from time to time direct, and each witness who testifies shall be subject to examination and cross-examination by any member of the commission.
3. The commission will also receive written statements, communications, or arguments upon any subject proper for its consideration; but such statements, communications, or arguments will not be published, except by the direction of the commission.
4. Persons desiring to be heard in oral argument upon any subject will make application to the commission in writing, specifying the subject on which they desire to be heard and the time desired. The commission reserves the right, in each instance, to determine whether it will hear such proposed argument, and, if it does, what time shall be allowed, and to fix the time and place for the argument. And such arguments will not be published except by special order of the commission.
5. Persons who are assigned a hearing on argument are requested to furnish to the commission a statement in writing of the points they propose to make, and to be careful in quoting authorities to furnish a list of those cited.

On the 26th, the Assistant-Secretary of the Treasury, H. F. French, submitted an argument in favor of simplicity in classifications

and tables, and the avoidance of ambiguity and complexity in the provisions of the law. He was followed by a representative of the Maltsters' Association, who desired more effective protection against Canadian competition. Then a representative of salt-manufacturers declared that they could not endure any reduction of the duties on salt. An importer and manufacturer of aniline colors and dye-stuffs favored reduction of duties, saying that 1,200,000 pounds of imported dyes in 1881 paid \$1,500,000 in duties, and that those which cost \$1 a pound in England were sold for \$4 in the United States. He was followed by a representative of the New York Free-Trade Club, in favor of a thorough and radical revision of the tariff. On the 27th there were more arguments in favor of a duty on quinine, in the course of which it was stated that the total consumption was 4,000,000 ounces, of which 1,600,000 are consumed in the United States. There were five factories in this country and thirteen in Europe, and the price, which was \$4 an ounce when the duty was abolished, had declined to \$2. A concern, with an investment of \$150,000, produced 200,000 ounces a year. A New York importing house presented a schedule of modified duties for carpetings, silks, woolen fabrics, dress-goods, linens, and cottons. On the following day the linen, hemp, and jute interests put in an appearance, and asked for more protection. There was also a manufacturer of carriages who asked for higher duties. Assistant-Secretary French, on the 31st of July, continued his explanation of the complications and difficulties of the existing tariff system, and advocated the establishment of a customs court. The same day a representative of the drug interest argued for a revision and simplification of duties, and favored in general the putting of raw materials on the free list. A representative of the New Orleans Cotton Exchange demanded that jute-butts, iron cotton-ties, and Manila and Sisal hemp be put on the free list. On the 1st of August the question of sugar duties was brought up, and on this and other occasions it was shown that the Louisiana planters demanded the maintenance of high rates on raw sugars, the refiners favored a reduction on raw but not on refined sugars, and the importers favored a reduction all around. On August 3d an importer and dealer in antiquities desired to have them put on the free list; and a manufacturer of fertilizers asked that sulphur-ore be admitted free. On the 4th there was a statement regarding the cultivation of jute in this country, which favored the retention of the existing duty. The Gold-Beaters' Union demanded an increase of duty on gold-leaf; an importer of paint materials favored a reduction of duties; and an importer of linens took the same ground. This was the general position of importers, while that of manufacturers was for the maintenance or increase of rates. In the early part of August the commission spent two days in

New York, examining the methods of the custom-house and appraiser's office. On the 10th, at Long Branch, a hearing was given to manufacturers of saddlery, hardware, and morocco-leather, the former in opposition to a reduction of duties, and the latter against discrimination between tanned and finished morocco. There was also an argument from a dry-goods importer in favor of free raw materials and lower rates for manufactured goods. The same day there were statements in favor of continued protection of sugar-planters and silk-raisers, from persons connected with those interests.

These statements show the general character and drift of the testimony as it continued at Long Branch. A maker of cutlery demanded protection for pocket-knives; a representative of tobacco-growers wanted a duty on Sumatra tobacco-leaf which should prevent its use for cigar-wrappers here, for which it was especially adapted; silk-growers wanted high duties on raw silk; and so on. One special interest after another appeared and argued for a tinkering of the tariff which should add to their profits. Growers of raw materials wanted protection; manufacturers favored free materials, but protective duties on manufactured products; importers and dealers in foreign goods asked for a reduction of duties, but only an occasional voice was raised in behalf of consumers, and little was heard regarding the wider interests of the nation as a whole. On the 23d of August the commission went to Boston, and spent the three following days in taking testimony there. A variety of manufacturing interests was represented before the commission, prominent among which was that of sugar-refining, which protested against high duties on the low grades of foreign sugar. From Boston the commission went to Rochester, N. Y., where there was one session, on the 29th of August. Communications were received there in favor of admitting living trees, flower-seeds, and iron-ores free of duty. Numerous other communications were read at this session, but they had been previously received, and were from various parts of the country. On the 30th there was a session at Buffalo, at which a reduction of the duties on aniline dyes was opposed, and a reduction of those on pottery was favored, by certain Philadelphia and Boston importers. The only local interest of importance that put in an appearance was that of the maltsters, who desired protection against Canadian malt, but asked for the free admission of barley. August 31st was spent at Cleveland, Ohio, where the principal demand was for an increase of duties on hoop-iron. There was also an argument in favor of protecting the Lake Superior iron-ore interest. At Detroit, Mich., on the following day, a charcoal pig-iron manufacturer argued in favor of retaining the duties on that article, and sundry other interests put in their claims for protection. One day was spent at Indianapolis and two at Cincinnati, where the iron interests were largely represented, and generally

urged the maintenance of high protective duties. The potteries and glass-works put in similar claims. At Louisville, Ky., on the 6th of September, the tobacco interest came to the front to urge the abolition of internal revenue taxes; and communications were received in favor of retaining the duties on sugar, molasses, and rice. The three days following this date were spent at Chicago. The time was largely taken up with the reading of communications received from different parts of the country, though the representatives of some local interests claiming protection appeared. The commission was at Milwaukee September 11th, at St. Paul September 12th and 13th, and at Minneapolis September 14th. At the latter place complaint was made of the duty on Canadian wheat, and the retaliatory Canadian duty on flour. Two days were spent at Des Moines, Ia., and two at St. Louis, September 18th and 19th. At the latter place the lead and zinc interests claimed protection against foreign competition, and arguments were made in favor of maintaining the duties on sugar, molasses, and rice. Here an advocate of free trade appeared in behalf of the farmers and great producing classes of the West, claiming that the burden of protecting special interests fell upon them. From St. Louis the commission went through the South, spending one day at Nashville, one at Chattanooga, two at Atlanta, Ga., one at Savannah, one at Charleston, S. C., one at Wilmington, N. C., and one at Richmond, Va. They heard arguments in favor of protecting sugar, rice, and peanuts, reducing duties on cotton-ties, abolishing internal revenue taxes on tobacco, etc. Everywhere the communications and statements came chiefly from representatives of special industries or from organizations concerned with local interests. The commission reached Baltimore September 29th, and spent two days there, hearing statements regarding chemicals, fertilizers, etc. Six days, beginning with October 2d, were spent in the city of New York. There the commercial and importing interests were found to be in favor of a general reduction of duties, but claims were conflicting according to the special benefits sought from tariff legislation. Manufacturers spoke generally for the abolition of duties on raw materials, and their maintenance on the finished product. After leaving New York the commission spent three days at Pittsburgh, Pa., one at Wheeling, W. Va., and three at Philadelphia, where it closed its public hearings on the 16th of October. An intention to visit the Gulf States and the Pacific coast was abandoned for lack of time. Twenty-nine places were visited in all, seventy-eight days were occupied in taking testimony, and the number of statements received, oral or written, was 604. The testimony occupied 2,625 printed pages.

After the investigations of the commission were completed, some time was spent in preparing the report, which was submitted to Con-

gress on the first day of the session, December 4th. The commission disavowed any purpose of attempting to construct a new system, or apply different principles from those on which the existing tariff was based. They said in their report:

The practical question presented to the commission is that of reconciling the interests of revenue, including the considerations of its sufficient maintenance or possible reduction, with justice to the interests of the nation involved in the preservation of its industries and the security of its labor. The legislation to be recommended is for the present, and not for posterity, which must meet its own emergencies, and the determination of this question involves considerations of expediency, not the least of which is that the measures recommended be such as shall be acceptable to the country and its representatives in Congress. It must accept the facts that discrimination in the imposition of import duties, a discrimination for the most part positive and avowed, and always, at least, with an incidental reference to the defense of the national industries, has been the policy of the country for generations; that in consequence of this policy thousands of millions of dollars have been invested in special pursuits; that the whole business of the country has been adjusted to the conditions of things growing out of this policy, and is inseparably identified with it; and that a subversive or radical change in the present economic system would throw labor out of employment, ruinously depreciate values, and create a general industrial and commercial disaster. With these views, with the unmistakable evidences of public opinion against radical changes, with the whole current of the testimony before the commission in recognition of the necessity of preserving the general structure of our tariff system, with the clear sanction of the law creating this body, and its injunction to render justice to all interests, the commission has deemed it proper to limit its work to a revision, although a substantial revision, of the existing tariff.

The general purpose was to conform to the existing discriminations, and preserve the designations and phraseology of the law while making such changes in rates as were deemed expedient. "Early in its deliberations," says the report, "the commission became convinced that a substantial reduction of tariff duties is demanded, not by a mere indiscriminate popular clamor, but by the best conservative opinion of the country, including that which has in former times been most strenuous for the preservation of our national industrial defenses. Such a reduction of the existing tariff the commission regards not only as a due recognition of public sentiment and a measure of justice to consumers, but one conducive to the general industrial prosperity, and which, though it may be temporarily inconvenient, will be ultimately beneficial to the special interests affected by such reduction."

Entertaining these views, it says, further on:

The commission has sought to present a scheme of tariff duties in which substantial reduction should be the distinguishing feature. The average reduction in rates, including that from the enlargement of the free list and the abolition of the duties on charges and commissions, at which the commission has aimed, is not less on the average than 20 per cent, and it is the opinion of the commission that the reduction will reach 25 per cent. The reduction, slight in some cases, in others not attempted, is in many cases from 40 to 50 per cent. The actual amount of the total re-

duction can not be stated with precision, partly from want of time to make the calculations required for such details in the brief period intervening between the final determination in particular cases and the preparation of this report; and there is no exact standard by which to estimate the amount of reduction in revenue, on account of the varying character, amount, and prices of commodities in the importations of different years. If the reduction reaches the amount at which the commission has aimed, and if there is any truth in the allegation of the opponents of the present economic system, that a duty on articles such as are produced in this country, whether in manufactures or agriculture, enhances the price to the consumer, not only of what is imported, but of the whole domestic production, to an amount of which the duty is a measure, the reduction proposed by the commission would benefit consumers to the extent of hundreds of millions of dollars.

As to the principle generally followed in making reductions, it is said that the effort was "to make the reduction apply to commodities of necessary general consumption, and to di-

minish or withhold the reduction upon commodities of high cost, requiring more labor, and which being consumed principally by the more wealthy classes could bear higher duties, at the same time supplying revenue and encouraging the higher arts without being oppressive in their operation." It is further stated that the purpose was "to make a discrimination in the rate of the duties imposed upon a manufactured product and the raw material or partially manufactured product of which it is made, the object being to impose a higher duty upon the latter." By way of showing how momentous were the interests to be affected by tariff legislation, the commission presented the following table, and the subjoined explanatory remarks, showing the progress of the United States in manufacturing industry during the period of the last thirty years:

CENSUS YEAR.	Number of establishments.	Capital.	Average number of hands employed.	Total amount wages paid during year.	Value of materials.	Value of products.
1850.....	123,025	\$588,245,851	957,059	\$286,755,464	\$555,123,822	\$1,019,106,616
1860.....	140,433	1,009,855,715	1,311,246	878,878,966	1,081,605,092	1,855,861,670
1870.....	252,148	2,118,208,769	2,053,996	775,584,315	2,488,427,242	4,232,825,442
1880.....	253,840	2,790,223,506	2,738,950	947,919,674	3,394,840,026	5,369,667,706

It is to be noted that the figures given for 1870 are upon the basis of the then depreciated currency, while the figures for 1880 are upon a gold basis.

The above table shows that capital increased in the decade ending in 1860 about 90 per cent; during the period between 1860 and 1870, about 110 per cent; and for the last decade only about 32 per cent, to which should be added the difference in the standard of values. That at the close of the first decade referred to, the number of hands employed increased 37 per cent; between 1860 and 1870, 75 per cent; and between 1870 and 1880, about 33 per cent.

From 1850 to 1860 the wages paid increased 60 per cent; from 1860 to 1870, 105 per cent; and from 1870 to 1880, as we come down again to a gold basis, 22 per cent.

The materials used from 1850 to 1860 increased 86 per cent; from 1860 to 1870, 141 per cent; and from 1870 to 1880, 36 per cent.

The value of the products of these manufactures increased from 1850 to 1860, 85 per cent; from 1860 to 1870, 124 per cent; from 1870 to 1880, 27 per cent.

The progress of the nation in manufactures during the last forty years has been, for capital invested, 423 per cent; for hands employed, 180 per cent; for wages paid, 300 per cent; for materials used, 511 per cent; and for value of products, 427 per cent.

The growth of industries during the last decade, upon the whole, has been a healthy and prosperous one, and yet it has not more than kept up with the growth of population. The increase in population during the last ten years has been about 80 per cent, whereas it has been shown that the increase of capital invested in manufactures has been 32 per cent; in the number of hands employed, 35 per cent; in the amount of wages paid, 22 per cent; in the value of materials consumed, 36 per cent; and in the value of the products, 27 per cent.

According to Mr. Mulhall, an English statistician of recognized authority, the total value of the products of English manufactures for 1880 was about \$4,000,000,000. The table above given shows the value of the products of our own manufactures to be, in round numbers, \$5,370,000,000, giving the United States the eminence of being the greatest manufacturing country in the world.

The commission presented a series of schedules of duties to be imposed under its proposed revisions of the law, and also various changes in the administrative methods of the revenue system. Among the latter were the substitution of a single entry-fee at the custom-house, for numerous and annoying small fees; giving authority for certain procedures already in use without the sanction of law; giving facilities for the importation of the personal effects of immigrants; providing that the weights and measures employed in invoices may be those in general use in the country of exportation; requiring invoices of merchandise subject to *ad valorem* duties to be made out in the currency actually paid therefor, as well as that of the country from which importation is made; limiting the requirements of triplicate invoices to articles subject to *ad valorem* duties only; making it imperative that, before certifying to an invoice, the consular officer shall require an oath, affirmation, or declaration that the invoices are correct; providing more equitable, rigid, and efficient penalties for under-valuations; providing for an appraisement, separate and distinct in all cases; permitting the examination of bulky goods for appraisement at other places than the public stores. Provision was also made for the repeal of the requirement of the existing law that land transportation costs and charges should be added to the basis of computation for *ad valorem* duties, and a bill was submitted for establishing a customs court for the determination of disputed questions arising under the tariff laws as to the classification of duty on imported merchandise, etc.

The schedules of duties were fourteen in

number, lettered from "A" to "N." Schedule "A" comprised chemical products which were before included in "sundries." The capital invested in the interest was said to have increased nearly 200 per cent in ten years, while the amount paid in wages had more than doubled, and the value of the product had increased from \$47,397,388 to \$117,407,054. Many articles, mostly raw materials of manufacture, previously subject to duty, were placed on the free list; and most of the changes in rates were in the direction of reduction. Counting additions to the free list, the general reduction of duties on chemical products was 25 to 30 per cent of the old rates. Schedule "B" comprised earthenware and glass-ware. No change was recommended in the duty on brown earthenware and common stone-ware, and that on white and printed earthenware, white and decorated china, porcelain, and parian ware was increased 15 per cent. It was claimed that this increase was largely offset by the abolition of duties on packages, inland freights, and charges and commissions. The old rates on window and plate glass were retained, and those on cut, engraved, printed, colored, and other fancy glass-ware were raised from 40 to 50 per cent *ad valorem*. Schedule "C" covered metals. Increase of production in the principal industries affected by this class of duties is shown in the census statistics to be from 1,434 establishments in 1850 to 3,532 in 1880, from 22,370 to 298,862 hands employed, from \$16,370,760 to \$416,041,648 of invested capital, from \$7,165,248 to \$122,648,191 paid in wages, from \$43,797,854 to \$380,304,950 value of materials used, and from \$83,954,529 to \$604,553,460 value of products. In the commission's revision of the schedule of duties specific rates were substituted for *ad valorem*, and the changes were in the direction of reduction throughout the list. No material change was made in the duty on iron-ore, but fifty cents a ton instead of 20 per cent *ad valorem* was recommended. The rate for pig and scrap iron was three tenths of one cent per pound, a slight increase for cast scrap-iron, and a reduction for pig-iron. The rate on steel rails was reduced from \$28 per ton of 2,240 pounds to eight tenths of a cent per pound. Duties on the different kinds of bar-iron were reduced from 10 to 20 per cent on the old rates; those on sheet-iron were not materially changed; varying reductions to a moderate extent were made on hoop, band, and scroll iron. Reductions on hardware, tools, etc., varied from 20 to 50 per cent. The duty on tin plates was considerably increased. The reductions recommended on steel ranged from one fourth of one cent per pound on the lower class to about 30 per cent on the higher grades of crucible steel. On iron and steel wire the reductions ranged from 20 to 30 per cent; on manufactures of copper, lead, and zinc, from 15 to 25 per cent. All compound duties were discarded. The high duty on copper-ore was retained.

The duties on woods comprised in schedule "D" were not changed. Schedule "E" contained the duties on sugar, which were simplified and reduced. The polariscope test of saccharine strength was adopted, and the reductions were equivalent to 21.70 per cent on sugars below No. 13 Dutch standard, and 10 per cent on those above that grade. No changes were made in the duties on tobacco included in schedule F, except to abolish the compound duty on cigars, making the rate \$3 per pound. Schedule G included provisions. In this there were few changes, and those in the direction of reduction, but specific duties were substituted for *ad valorem*. Schedule H embraced liquors, and no material change was made, except to abolish allowances for breakages. Schedule I included all cotton goods. Compound duties were abolished, specific rates generally adopted, and the classifications were simplified. Some reduction was effected in the duties, though they remained at rates equivalent to from 30 to 60 per cent of the cost of the goods. Schedule "J" (flax, hemp, etc.) was simplified, but no material change was made in the rates of duties. Next to the metals schedule that of wool and woollens, designated as "K," was regarded as the most important. Here alone compound duties were retained. It was claimed that reductions were effected amounting to from 18 to 40 per cent, being greatest on the cheaper goods, but duties were retained on raw material as well as manufactured products. In the silk schedule ("L") specific were substituted for *ad valorem* duties, and a reduction effected said to be equivalent to about 23 per cent. The product of manufactured silks had increased from \$12,739,362 to \$41,033,045 in the single decade from 1870 to 1880. Books and papers were taken from "sundries" and classified in a separate schedule designated "M," but no material change was made in the duties. Schedule "N" included sundries. The free list was somewhat enlarged.

The total value of merchandise imported into the United States in 1881 was \$650,618,999.63, of which \$202,557,411.68 came in free of duty, and \$448,061,587.95 were dutiable. The amount of duties collected was \$193,800,879.67. The total amount of the manufactured products of the country in 1880 is put at \$5,369,667,706, and classified as follows under the tariff schedules in the report of the commission:

SCHEDULE.	Products in 1880.
A. Chemicals . . . . .	\$117,407,054
B. Earthen and glass ware . . . . .	28,956,693
C. Metals . . . . .	604,553,460
D. Woods . . . . .	509,485,611
E. Sugars . . . . .	181,404,520
F. Tobacco . . . . .	118,665,366
G. Provisions . . . . .	1,036,572,580
H. Liquors . . . . .	142,122,043
I. Cotton . . . . .	210,950,383
J. Flax . . . . .	5,518,866
K. Woollens . . . . .	267,182,914
L. Silk . . . . .	41,033,045
M and N. Sundries, books, etc. . . . .	1,159,989,616
Remainder . . . . .	945,825,550
Total . . . . .	\$5,369,667,706

While the classifications and rates of duty fixed in the schedules were not satisfactory to all the members of the commission, they received their final assent. Commissioner Underwood, however, did not concur in the recommendation for the establishment of a customs court. Commissioners Ambler, Porter, and Underwood withheld their approval from the retention of compound duties in any case. Commissioner Ambler did not concur in recommending the abolition of duties on what are known as "dutiable costs and charges," considering those to be a legitimate part of the cost of the goods. Commissioners Garland and Ambler recommended the adoption of a system of valuation for goods, subject to *ad valorem* duties, based on the value of the goods in the markets of the United States at the time of their importation. With these qualifications, the report was signed by all the members of the commission, except Mr. McMahon, who died before it was finished.

The report was referred, on the first day of the session of Congress, to the Ways and Means Committee of the House of Representatives, which proceeded to construct a bill of its own, based on the suggestions of the commission. The Finance Committee of the Senate also set about framing a measure which was attached as an amendment to the House bill for reducing internal revenue taxes which had passed the lower branch at the preceding session. The Senate bill was the first to be reported, and was called up for consideration on the 10th of January. The House bill was reported by the Ways and Means Committee on the 16th. A caucus of the Republican members of the House, held on the 19th, decided that it should be brought up for consideration on the 21st, and have preference over all other legislation, except appropriation bills, until disposed of. It was not, however, brought up until the 25th. Both the House and Senate bills contained many variations from the rates proposed by the commission, and some changes in classification were made. The Ways and Means Committee of the House had taken a number of articles, including quinine, from the free list and subjected them to duties, and had raised the rates in many cases, especially in the metals and wool and woolen schedules. In the Senate bill there were fewer instances of increase, while some reductions were made from the rates proposed by the commission. The two bills were under discussion, and subject to amendment, for several weeks. Many changes were made in the Senate bill, the general disposition appearing to be in favor of reduction, while there was a strong pressure of special interests to maintain or advance rates. The schedules which excited most debate were those including lumber, iron and steel, sugar, and woolen manufactures. By the 20th of February the House had practically abandoned all effort to dispose of its own measure, and had failed in an effort

to pass a bill for the reduction of internal revenue taxes by a two-thirds vote under a suspension of the rules. On the date mentioned the Senate passed its bill, by a vote of 42 to 19. Nine Democratic Senators voted for the bill, and 18 against it—Mitchell, of Pennsylvania, being the only Republican recorded in the negative.

The bill as passed by the Senate was satisfactory neither to the revenue reformers nor to the high protectionists. The latter class had the predominating influence, and were determined to secure further modifications by forcing the matter into the hands of a committee of conference, without permitting a direct vote on the question of concurrence in what was nominally an amendment of the House revenue bill, or on the question of passing the bill. The measure might be passed under a suspension of the rule by a two-thirds vote, or it might come up for concurrence or non-concurrence in the Senate amendment, when the question could be settled by a majority vote. The chance of its being reached under the rules for the latter action was slender, and a rule was proposed by Mr. Kasson, of Iowa, permitting the House to take up the bill for concurrence or non-concurrence at any time by a majority vote. Those who desired to make further changes in the rates, were not willing to risk the chance that the bill might pass by a two-thirds vote under a suspension of the rules, if a motion to that effect were made, and were afraid that the Senate amendment would be concurred in, should a vote on that question be taken under the proposed new rule. Their desire was to shut off every alternative but a reference to a committee of conference. A caucus of Republican members of the House was held on the 22d of February, and, after considerable discussion, the following resolution was adopted:

*Resolved*, That in the opinion of this caucus the House should vote to non-concur in the Senate amendment to the House revenue bill, and should refer the same to a committee of conference of five members from each House.

Although there were 118 members present at the caucus, only 85 votes were cast for the resolution. Mr. Kasson tried to get a declaration in favor of so amending the rules as to "enable the majority of the House to reach and finally act at this session upon the revenue and appropriation bills," but did not succeed. On the 24th the House Committee on Rules reported the following:

That during the remainder of this session it shall be in order at any time to move to suspend the rules, which motion shall be decided by a majority vote, to take from the Speaker's table House bill No. 5,533, with Senate amendments thereto, entitled "A bill to reduce internal revenue taxation," and to declare a disagreement with the Senate amendments to the same, and to ask for a committee of conference thereon, to be composed of five members on the part of the House. If such motion shall fail, the bill shall remain on the Speaker's table unaffected by the decision of the House on said motion.

As the united opposition of the Democrats was anticipated to this so-called amendment to the rules, it was necessary to secure a Republican quorum to adopt it. An effort was made on the 26th, but without success. Promptly on the following morning, however, the rule was adopted by a vote of 129 to 22, most of the Democrats refraining from voting. The question of the constitutional right of the Senate to originate revenue measures was then raised. Mr. Hammond, of Georgia, offered a resolution declaring that the action of the Senate, in substituting for the House bill to reduce internal revenue taxation, a proposition imposing both import duties and internal taxation, was in conflict with the true intent and purpose of the clause of the Constitution which requires that all bills for raising revenue shall originate in the House of Representatives, and declaring further that the bill with Senate amendments shall lie upon the table. A substitute was offered by Mr. Haskell, of Kansas, as follows:

*Whereas*, House bill No. 5,538, entitled "An act to reduce internal revenue taxation, and for other purposes," under the form of an amendment in the Senate to title 33 of the Revised Statutes, which provides for duties on imports, has been so modified and changed by the introduction of new provisions, containing among other things a general revision of the statutes referred to, as both to increase and reduce duties on imports, and in many instances to repeal and in others to amend the laws imposing import duties; and

*Whereas*, In the opinion of the House, it is believed that such changes and alterations are in conflict with the true intent and purpose of the Constitution, which requires that all bills for raising revenue shall originate in the House of Representatives: therefore—

*Resolved*, That if this bill shall be referred to a committee of conference it shall be the duty of the conferees on the part of the House on said committee to consider fully the constitutional objections to said bill as amended by the Senate and herein referred to, and to bring the same, together with the opinion of the House in regard hereto, before said conference, and if necessary, in their opinion, after having conferred with the Senate conferees, said conferees on said committee may make report to the House in regard to the objections to said bill herein referred to.

This was adopted by a vote of 139 to 122. Mr. Kelley, of Pennsylvania, then moved to suspend the rules, take from the Speaker's table the internal revenue bill, with Senate amendments, non-concur in those amendments, and appoint a conference committee, to consist of five members on the part of the House. Agreed to—yeas 148, nays 110. This was a party vote, except that Messrs. Converse, Curtin, Ermentrout, Hardenbergh, Klotz, Ladd, Morse, Mutchler, Phelps, Wilson, and Wise, of Pennsylvania, voted with the Republicans in the affirmative, and Messrs. Brumm, Burrows, of Missouri, Campbell, and Updegraff, with the Democrats in the negative. The conferees first appointed on the part of the Senate were, Senators Morrill, Sherman, Aldrich, Bayard, and Beck. Those on the part of the House were, Kelley, McKinley, Haskell, Randall, and Carlisle. The first three in each case were Republicans, and known high-tariff men. The others were Democrats,

and, with the exception of Randall, revenue reformers. On the next morning, February 28th, Mr. Randall asked to be relieved from service on the conference committee, and the request was granted. Mr. Morrison, of Illinois, and Mr. Tucker, of Virginia, having successively declined to serve, Mr. Speer, of Georgia, was appointed to the vacant place. In the Senate, on the same day, in view of the constitutional question raised in the House after the conference was asked for, the following resolution was adopted without a division:

*Resolved*, That it is the opinion of the Senate that the conference on the House bill 5,538 (the internal revenue and tariff bill) should be full and free, and that if the Senate conferees become advised that any limitation has been placed by the House upon the action of their conferees the Senate conferees shall retire and report the fact to the Senate for its consideration.

At the first conference, on the evening of February 28th, the House resolution regarding the Senate's right in respect to revenue bills was presented, and Senators Bayard and Beck took the ground that it made it necessary for the Senate conferees under their instructions to report without further conference. Their Republican colleagues did not agree with them, and on the following morning Messrs. Bayard and Beck asked to be relieved from further service on the committee. They were excused, and Senators Voorhees and McPherson were named. Mr. McPherson declined, and Mr. Harris was named. He declined also, and then Mr. Voorhees asked to be excused. Messrs. Morgan and Gorman were next named, and asked to be excused. The same result followed with Messrs. Davis, of West Virginia, and Jones, and with Messrs. Butler and Maxey. It being intimated that no Democrats could be found to serve, Senators Ingalls and Mahone were appointed. The former declined, as did Mr. Miller, of California; and finally Mr. McDill was named, and the committee was once more complete. The committee reached an agreement and made a report to the two Houses on the evening of the 2d of March. In the Senate, after an explanation of the report by Mr. Morrill, and a short debate, in which Mr. Beck opposed the changes that had been made, a vote was reached at 12.30 A. M. of March 3d. It resulted in an acceptance of the report by a vote of 32 to 31. The report was not considered in the House until the regular session of March 3d, when Mr. Kelley made an explanation, and a debate followed, in which Mr. Carlisle was the chief opponent of the committee's work. A vote was taken at 5.30 P. M., and the report was agreed to—152 to 116. Twenty Democrats only voted for the bill, and 16 Republicans voted against it. The day's session continued into the morning of Sunday, March 4th, and before the adjournment the tariff bill was signed by the President.

The effect of the bill is a matter which it is difficult to calculate in advance of any experience of its working, and opinions differ as to

the extent of the reduction in revenue to be effected. Mr. Kelley, in explaining the action of the conference committee in the House, estimated the total reduction at \$65,000,000 to \$70,000,000, of which \$35,000,000 to \$40,000,000 would be taken from the internal revenue. All internal revenue taxes were repealed except those affecting whiskey, beer, tobacco, and bank circulation, and those on tobacco were materially reduced. Those entirely abolished were the taxes on bank capital and checks, and on matches, patent medicines, and perfumery. Those on tobacco were reduced one half, viz., from sixteen to eight cents per pound, a proportionate reduction being made in the case of cigars and cigarettes. Of the final changes in the rates of duty the following may be mentioned as most important: Those on common earthenware increased from 50 to 55 per cent *ad valorem*; but it was claimed that this was offset by excluding packing and transportation charges. Painted and gilded earthenware was transferred to the class of china and porcelain, and made to pay 60 per cent. The rate on iron-ore was increased to 75 cents per ton, the compound duty under the old law amounting to 57 cents, and that recommended by the commission being 50 cents. The old rate on steel rails was \$28 per ton; it was fixed by the conference committee at \$17. There was a moderate reduction on pig and bar iron. In the large and important schedules of cotton and woolen materials and goods there were many changes, but the reduction in rates was comparatively small, and in some cases they were increased. Mr. Kelley, in his explanation, stated that cotton goods, which previously paid 35 per cent *ad valorem* (such as stockings, hose, shirts, and drawers), would have to pay 40 per cent; and while there was a reduction of about 18 per cent on wool (the raw material), the duties on "all-wool" fabrics was increased from 6 and 8 cents a yard and 35 and 40 per cent *ad valorem*, to 9 cents a yard and 40 per cent *ad valorem*. Jute-butts were taken from the free list and subjected to a duty of \$5 a ton. The duty of 25 per cent on printed books was retained. In the sugar schedule there was reduction in the grades below number 13, Dutch standard, to 2½ cents a pound, amounting to about 15 per cent of the old rates. On the higher grades the reduction was about 28 per cent.

There was ample evidence that the result was satisfactory to no considerable class of citizens, and that the work of revising the tariff was not regarded as by any means complete. The reduction in revenue was very moderate, that in the burden of taxation still less, while the complications and uncertainties of the tariff were hardly diminished. The new law was to take effect July 1, 1883.

**TELEGRAPHS AND TELEPHONES.** Statistics of the telegraph and telephone companies of the United States were collected by the national Government for the first time in 1880, and are given in the reports of the tenth cen-

sus. The following are the statistics of the telegraph companies:

RECEIPTS.	
From messages.....	\$13,512,116
From other sources.....	3,184,507
Total.....	16,696,623
Net.....	6,573,848
EXPENSES.	
Salaries.....	\$4,896,123
General expenses.....	2,804,158
Repairs.....	1,045,880
All other expenses.....	1,486,114
Total.....	10,218,284
CHARGES AND OTHER ITEMS.	
Interest paid on debt.....	\$564,341
Sinking-fund appropriation.....	40,000
Total.....	604,341
Net income.....	5,969,501
Dividends declared.....	4,186,749
BALANCE FOR THE YEAR.	
Surplus.....	\$1,882,971
Deficit.....	95,720
ASSETS.*	
Franchise.....	\$93,062,921
Cash.....	1,087,735
Bills receivable.....	179,269
Accounts receivable.....	2,992,652
Total assets.....	97,232,639
LIABILITIES.*	
Capital stock.....	\$67,901,235

MESSAGES TRANSMITTED.†	
Number for the press.....	3,154,998
Number for other persons.....	28,548,788
Total.....	31,703,181
DESCRIPTION OF LINES.	
Total length of lines—miles.....	110,726
Total miles of wire.....	291,212
Number of stations or offices.....	12,510
Principal terminus stations.....	205
Number of poles set during the year.....	243,848
AVERAGE NUMBER OF PERSONS EMPLOYED.	
General officers.....	173
General office-clerks.....	165
Operators.....	9,661
Messengers.....	2,469
Line-repairers and other employes.....	2,461
Total.....	14,928

The census report on the telephone system of the United States gives returns of 148 companies and private concerns, which had 84,305 miles of wire, 54,319 receiving telephones, and 3,338 employes.

\* The railroad companies owning telegraph lines have reported their receipts, expenses, and general financial statements, but the assets, liabilities, etc., of such companies, being included with their railroad accounts, are not included in the above statistics.

† Twenty-seven of the seventy-seven companies make no report of the number of messages sent. Of these, four are operated by the Western Union Company, two are not in operation, two make no report, the Baltimore and Ohio is operated by the railroad company, and the Gold and Stock does not have a message business. The remaining seventeen companies, reporting an aggregate amount of \$410,737.64 receipts from messages, have kept no record of the number of messages sent. The receipts from these companies are only a little more than 2 per cent of the total receipts from messages sent.

**TENNESSEE. STATE OFFICERS.**—Governor, Alvin Hawkins; Secretary of State, D. A. Nunor; Treasurer, M. T. Polk; Comptroller, James N. Nolan; Superintendent of Public Schools, W. S. Doak (died in July), succeeded by G. S. W. Crawford; Commissioner of Agriculture, Statistics, Mines, and Immigration, A. W. Hawkins; Attorney-General, B. J. Lea; Adjutant-General, Ernest Hawkins. Judges of the Supreme Court: J. W. Deadrick, Chief-Justice; T. J. Freeman, Peter Turney, W. F. Cooper, and W. J. McFarland, Associate Justices. United States Senators, Isham G. Harris and Howell E. Jackson. Members of the Forty-seventh Congress: J. D. C. Atkins, L. C. Houk, J. F. House, Benton McMillan, W. R. Moore, A. H. Pettibone, C. B. Simonton, W. O. Whitthorne, Richard Warner, and George G. Dibrell. Speaker of the State Senate, George H. Morgan; Speaker of the House of Representatives, H. B. Ramsey. Members (elect) of Forty-eighth Congress—First District, A. H. Pettibone, Republican; Second District, L. C. Houk, Republican; Third District, George C. Dibrell, Democrat; Fourth District, Benton McMillan, Democrat; Fifth District, James D. Tillman, Democrat; Sixth District, A. J. Caldwell, Democrat; Seventh District, J. G. Ballentine, Democrat; Eighth District, John M. Taylor, Democrat; Ninth District, Rice A. Pierce, Democrat; Tenth District, Carey Young, Democrat.

**FINANCES.**—The biennial report of the Treasurer, dated December 20, 1882, states as follows:

Balance in Treasury December 20, 1880.....	\$222,424 39
Amount received to December 19, 1881.....	1,057,147 18
Amount received to December 19, 1882.....	783,076 84
Total.....	\$2,062,648 41
Amount paid out on Comptroller's payable warrants from December 20, 1880, to December 20, 1881.....	\$680,281 87
Amount paid out from December 20, 1881, to December 20, 1882.....	904,401 46
Total.....	\$1,584,683 33

leaving a balance on hand December 20, 1882, of \$508,015.08. The State tax levy for 1882 was 20 cents on the \$100, which, on the assessed value of the taxable property in the State, amounting to \$221,929,813, should produce \$443,859.60, of which up to December 20th only \$142,823.72 were collected, leaving unaccounted for or uncollected \$301,035.88. The taxable property of the State for the year is as follows:

Acres of land, 25,199,573, valued at.....	\$146,657,593
Value of town lots.....	48,725,735
Value of other property.....	26,546,245
Total value.....	\$221,929,813

This is a decrease of \$3,360,060 as compared with 1881; but the value of personal property in 1882 shows an increase of \$10,412,907 as compared with that of the previous year.

The State debt, upon which no interest has been paid since July 1875, with the exception of those bonds held by educational and charitable institutions, and by the widow of Presi-

dent James K. Polk, has agitated the State during the entire year. The decision of a majority of the Judges of the Supreme Court of the State, in the case of Henry J. Lynn *et als* vs. M. T. Polk *et als*, delivered in February, declared the act of April, 1881, "to settle and compromise the bonded indebtedness of the State," to be unconstitutional and void. This act was designed to fund the entire debt at 100 cents on the dollar in bonds bearing 3 per cent annual interest, payable in ninety-nine years after date of issue, but redeemable at any time after five years at the pleasure of the State, and the act further provided that the interest coupons of the new bonds be receivable, at and after maturity, for all taxes and debts due to the State, and that the Secretary of State, Comptroller and Treasurer should constitute a "funding board" to carry out the purposes of the act. The court, by three of the judges (Judges Turney, Freeman, and McFarland), against two (Chief-Justice Deadrick and special Judge Ewing), held that the 3 per cent adjustment was legal, but that the part of the act making the coupons receivable for taxes was illegal, because the Legislature has no power to contract away the State revenues for such a time, or to make any contract which a subsequent Legislature can not modify or repeal. Said Judge Turney:

If the proposal to compromise is held good and shall be accepted by the bondholders, it will then be out of the power of any Legislature to at all interfere with the law under any circumstances. The provision that the coupons shall be receivable for taxes and all debts due the State becomes a contract.

The language of the provision gives to the holder the right to employ such means and legal process as will compel compliance, and so far the financial agency will be transferred to the creditors and through them to the courts, taking the management and control of the Treasury out of the hands of the Legislature and placing them beyond the protection of the courts of the State.

The moment the contract is executed it becomes the subject of Federal jurisdiction, and all the State courts are subordinate jurisdictions, and whatever may be the rulings of the State courts, and whenever the suit may be instituted for the enforcement of the contract, the Supreme Court of the United States will have the final and, of course, conclusive jurisdiction. Its decisions will be binding upon the State courts.

This will be a surrender of sovereignty. The State will no longer be its own guardian, with power to make provisions for its support and existence, but will be the ward of the Federal Government for ninety-nine years, its estate to be administered at the beck and nod of the bondholder, a centralization of the worst form.

A further consequence of the act will be a surrender by the State of its inherent as well as constitutional right of determining when and in what court and in what form it may be sued, or of withholding or withdrawing its liability to suit at its pleasure.

It is the right and duty of the State to hold its own purse-strings, to be its own financial agent, to provide for its own necessities, and to maintain its own sovereignty. These rights and duties must be exercised and performed at any cost and under all circumstances.

If the act before us is declared to be constitutional, they are all gone by an absolute transfer to the bondholders to be administered in a foreign court.

Chief-Justice Deadrick, in pronouncing the dissenting opinion, said:

1. I am of opinion that the title of the act, "to compromise and settle the bonded indebtedness of the State of Tennessee," sufficiently expresses the subject thereof; that it contains but one subject, the several sections of the act being pertinent to the object expressed in the title, and therefore it is not void, as being repugnant to section 17 of Article II of the Constitution of Tennessee.

2. I am further of opinion that the courts of the State have no power to review or reverse the legislative action of the General Assembly, except for the reason that such action is violation of the Constitution; and that such action, if within their constitutional power, can not be questioned by the courts of the State upon allegations of fraud and bribery.

3. I am also of opinion that tax-paying citizens may file their bill to protect themselves from the injurious operation of a threatened and impending act which is alleged to be unconstitutional, although such act is about to be performed under the apparent authority of the State. The court may inquire if there exists legal authority for the act; if so, it will not impede or obstruct it. On the other hand, if it appears it is prohibited by the fundamental law, it should restrain it upon the ground that the injurious act about to be done is unauthorized by law.

4. I am, therefore, of the opinion that the constitutionality of the act is fairly presented to this court for its decision and that the question for our deliberation is, Had the Legislature the power to pass it? And in my opinion it had the power—there being no exhibition or restraint in the Constitution to prevent it from doing so.

I, therefore, concur with Judge Ewing in holding that the act is constitutional and valid, and that the Chancellor's decree dismissing the bill should be affirmed.

The General Assembly which passed the 100-3 act, was convened by Governor Hawkins in extraordinary session, for the express purpose of adjusting the debt, and passed an act on May 19, 1882, known as the "60-6 act," authorizing the funding of the debt by issuing new bonds for sixty cents on the dollar, bearing 3 per cent interest for the first two years, 4 per cent for the next two years, 5 per cent for the next two years, and 6 per cent thereafter, and declaring that the funding under this act should cease after January 1, 1883. The necessary steps were taken to execute this law immediately after its passage, but at the close of the year the Comptroller reports that the holders of more than half of the outstanding bonds had declined to avail themselves of its provisions. It is reported that, under this act, only \$13,706,812.77 of the old bonds and accrued interest have been funded, that is, at 40 per cent off, new bonds for \$8,226,540 have been issued, leaving upward of \$14,000,000, bonds and overdue interest, still unfunded. This act was passed in acceptance of the proposition made by Mr. Eugene Kelly, of New York, as the chairman of the bondholders' committee, and as authorized to act in their behalf by a reported majority in numbers and amount of the holders of Tennessee bonds. The failure of all the bondholders to avail themselves of the compromise offered by this act within the specified time, left the question of the debt still as a bone of contention be-

tween those who favored the full payment of the debt, and were opposed to the compromise, and those who advocated the payment of a much smaller proportion of it than the act contemplated, and it consequently became a leading party issue in the canvass preceding the fall elections. The Democrats were divided into two parties, the "State-Credit" and the "Low-Tax" parties, and the Republicans expected, by alliance with the "State-Credit" Democrats, to carry the State, and obtain the power and patronage of the government.

The total bonded debt, as reported by the Comptroller on April 1, 1882, was..... \$20,206,800 00  
The accrued interest amounted to..... 8,183,551 50

Total liability April 1, 1882 ..... \$28,390,351 50

The Republican State Convention met May 3d, at Nashville, and nominated Alvin Hawkins for re-election as Governor.

The Democratic Convention, representing both wings of the party, met on June 20th, and on the fifth ballot nominated General W. B. Bate as the Democratic candidate for Governor. The nomination was afterward made unanimous. The division of opinion on the question of the State debt caused a protracted discussion on the majority and three minority reports of the committee on resolutions and platforms, resulting in the adoption of the majority report, which is as follows:

The Democracy of Tennessee, in State Convention assembled, declare:

1. That the Democrats of Tennessee, with their majority of the popular vote, are the rightful guardians of the honor and good name of the State, and that they willingly accept the duty and responsibility of preserving them from taint or suspicion, and that it is equally their right and duty to settle its indebtedness.

2. That while we accord to all an honest difference of opinion, we regard the enactment of the 60-3-4-5-6 as unwise, because it is, in our opinion, not in accord with the views of the people.

3. That there is a portion of the State debt, such as the bonds issued for the building of our Capitol, for the purchase of the Hermitage, etc., and commonly known as the State debt proper, with accrued interest, the validity of which has never been disputed by any portion of our party, we consider as a valid and sacred obligation of the State, and favor the payment of the same in full, less war interest.

4. That we tender to our creditors a settlement of the remainder of the State debt, by paying one-half the principal and accrued interest by issuing the bonds of the State bearing interest at the rate of 3 per cent per annum for the first ten years, and 4 per cent interest from thence to their maturity.

5. That we are unalterably opposed to every species of monopoly as destructive of liberty and the best interest of the people, and to this end we favor the establishment of a commission, the object of which shall be to regulate the tariffs charged by the railroads of the State so as to put an end to the unjust discrimination by said roads in favor of through as against local freights.

6. That we favor the time-honored doctrine of instruction, and recognize the right of the people at all times and upon all questions to communicate their views to their representatives.

7. That we favor an efficient public-school system, and the liberal education of all the children of the State.

8. We arraign the Republican party for its venality

and corruption in the administration of the State and Federal Government, and for its total disregard of all civil-service reform; and do hereby declare our unqualified opposition to the practice of said party in levying upon the employes of the Government a tax for political purposes.

Upon the adoption of the platform, a protest against it was made by about 150 delegates, among whom was ex-United States Senator Bailey, who afterward left the convention, and organized a conference, with General W. H. Jackson as chairman. Their objection to the platform was that it was "an effort on the part of the debtor factions to harmonize their differences at the expense of the public creditor, and to determine judicially upon that which should alone be adjudicated by a solemn court of justice, or else by voluntary agreement between the debtor and creditor." Having adopted a resolution directing the chairman to appoint an Executive Committee, and instructing that committee to call a convention of "the true Democracy of the State to meet at Nashville, July 11th, and having appointed a committee to prepare and publish an address to the public, stating their reasons for withdrawing from the convention, the conference adjourned. The address set forth in forcible terms the committee's unqualified approval of the "60-3-4-5-6" compromise, and stated that the new terms proposed, "although unjustly discriminating between the creditors," not only does not lessen the sum to be paid by the people, but makes it greater than that to be paid under the settlement made by the Legislature.

The convention of the "State Credit" wing of the Democratic party met on the 11th of July, passed resolutions approving the act of May 20th, opposing repudiation, advocating a liberal system of public schools, favoring the establishment of a railroad commission to regulate freights, etc., so as to prevent unjust discrimination, and arraigning the Republican party for its extravagance, disregard of the organic law, its tendency to centralization, and its protection of monopolies. After the adoption of the platform, Mr. Joseph H. Fussell was nominated as the "State-Credit" candidate for Governor.

The Greenback party also nominated a candidate, John R. Beasley. Their platform opposed the payment of any part of the debt, except a small portion of the "State debt proper," and not even that, unless the people at the ballot-box voted in favor of it. This party held that all the "railroad" bonds were illegally issued.

The canvass was active and heated, resulting in the election of General W. B. Bate, by a majority of 27,454 over Hawkins, 114,127 over Fussell, and 109,211 over Beasley, in a total vote of 224,204. The result of the election is understood to be an expression of the popular will against the "60-3-4-5-6" funding act, and in favor of an adjustment by the next Legisla-

ture on the following terms: 1. The payment of the "State debt proper" in full, less war interest, in bonds, payable in as short a period as possible, and bearing the same interest per annum as the original bonds. 2. All bonds held by educational and charitable institutions, and the 29 6 per cent bonds belonging to Mrs. James K. Polk, to be paid in full. 3. The remainder of the debt to be settled at fifty cents on the dollar, principal and interest (including war interest), in bonds to run for thirty years, with privilege of earlier redemption, and to bear interest at 3 per cent per annum. It is sought to excuse this repudiation of the "60-6" act, under which nearly half of the debt has been funded, on the ground that its passage was open to suspicion of corruption, that the people not only did not sanction it, but positively instructed many of their representatives who voted for it to vote against it, and that the terms which are now contemplated and approved by the people are the best they can afford to offer. The following is said to be a correct statement of the bonds originally issued, and constituting the "State debt proper."

500 bonds issued to Union Bank of Tennessee..	\$500,000 00
2,500 bonds issued to Bank of Tennessee.....	2,500,000 00
1,166 bonds issued to build the Capitol of Tennessee.....	866,000 00
48 bonds issued to purchase the Hermitage.....	48,000 00
1,258 bonds issued for stock in turnpikes.....	1,262,356 66
449 bonds issued for stock in Hiwassee Railroad Company.....	449,000 00
202 bonds issued for stock in East Tennessee and Georgia Railroad Company.....	202,000 00
200 bonds issued for stock in La Grange and Memphis Railroad.....	217,250 00

Total, 6,323 bonds, amounting to.....\$6,044,606 66

A bill was passed by the Legislature at its second extra session to redirect the State according to the congressional apportionment, although the number of representatives—ten—is not increased. After the bill was enrolled, signed by the Speakers of both Houses of the General Assembly, and approved by the Governor, it was discovered that three counties—Rhea, Meigs, and Cumberland—were not named in the bill. The defect was not detected until after the Legislature had adjourned. The Attorney-General and other prominent lawyers advised the Governor that the bill was void, on the ground that, if the Legislature, in dividing the State into congressional districts, could leave out three counties, they could leave out a greater number; that the Legislature ought to be convened to remedy the defect, or that the election should be held under the old and only valid law. The Governor did not follow this advice, and the election was held under the imperfect bill, which, in the opinion of many, makes it invalid, and may cause the State to lose her representation in the Forty-eighth Congress, until a perfect bill shall be passed and a good election had. The members-elect of the next General Assembly belong mostly to the Democratic party, and are divided, as to party, as follows:

Senate—Democrats .....	25
Republicans .....	8
Democratic majority .....	17
House—Democrats .....	74
Republicans .....	24
Greenbackers .....	1
Democratic majority .....	49
Democratic majority on joint ballot .....	66

EDUCATIONAL.—Under the laws of Tennessee, each county, city, and incorporated town is authorized to levy a tax for school purposes. In the towns and cities good graded schools have been established. The system of free schools is gradually becoming more efficient and more popular. The scholastic population this year was 549,179, of whom 408,364 are white and 140,815 are colored. The number of pupils enrolled was 207,680 white and 56,676 colored. The average number of days of free school instruction was 73.

The receipts for the year from the State were.....	\$121,488
The receipts for the year from the counties were.....	671,257
The receipts for the year from other sources were.....	149,630
Total.....	\$942,320

The expenditures during same time were \$821,883. The estimated value of school property amounts to \$1,078,794. The higher education of the youth of the State is well provided for at the Vanderbilt University, Nashville; Tennessee University, Knoxville; Wesleyan University, Athens; Cumberland University, Lebanon; University of the South, Sewanee; Southwestern University, Clarksville; Southwestern Baptist University, Jackson; and Fiske University, for colored students, Nashville. All the above, except the University of Tennessee, are controlled by some one of the religious denominations. Besides these, there are a number of colleges, academies, and well-established private schools. The State Normal College, at Nashville, is designed exclusively for the professional education of teachers and "practice in all grades of instruction." It receives its support from the Nashville University, from the State (\$10,000 in 1882), and from the Peabody Educational Fund. The contribution from this fund to the public schools of Tennessee, including the Normal College, has been \$12,800 during the year ending October, 1882.

STATE INSTITUTIONS.—The benevolent institutions sustained by the State are the School for the Blind and the Asylum for the Insane, at Nashville, and the School for the Deaf and Dumb, at Knoxville, all of which are liberally supported by the State, and are well managed. As is the case in so many other States, the capacity of the Insane Asylum is insufficient to accommodate the number of patients seeking admission. The total cost of the maintenance of the institution for the two years ending December, 1882, was \$139,952.27, or at the rate of \$69,976.13½ per annum—a rate of \$176.26 per patient per annum.

In the State-Prison of Tennessee the convicts are leased to individuals or corporations as in Georgia and other States. The report

of the Comptroller states that the receipts from the lessees of the Penitentiary for the two years ending December 20th, amounted to \$83,042.37. The existing lease will expire early in the next year. A commission was appointed in July, by Governor Hawkins, to consider the expediency and expense of removing the Penitentiary beyond the limits of the city, and report to the Legislature. Public opinion in Nashville is strongly in favor of the removal.

MINERAL WEALTH, MANUFACTURES, ETC.—The immense mineral wealth of Tennessee consists in her vast mines of iron, coal, marble, and zinc. From a small industry, marble-quarrying has grown so that in one county alone (Knox), capital to the extent of \$250,000 is employed in the business, and lesser sums are employed with great profit in several other counties. The income of the quarries in operation, for 1882, was a fraction under \$300,000. The marble is taken out in blocks, by means of drills, and is sold by the cubic yard. The demand for it, especially in the North, is extensive and rapidly increasing, and, notwithstanding the heavy cost of drilling, it is readily sold at prices highly remunerative to the quarry-owners. It is of a grayish-white color, and is as durable as Scotch granite. It can be highly polished, and in the process the various veins and tints of color are brought out. Analysis shows it to contain 98.486 of carbonate of lime, and tests prove its capacity to bear 12,000 pounds pressure to the square inch. From one quarry, owned and worked by Messrs. Tripp & Seaman, near Knoxville, specimens of forty varieties of marble have been obtained. Orders have been received for the shipment of large quantities to Pennsylvania and other Northern States. The zinc-works at Clinton, Anderson County, turn out 3,000 pounds of metal per day, and other zinc-works are about to be established at Knoxville. The coal area of the State is 5,100 square miles in extent, embracing the whole of the Cumberland plateau. Throughout this vast region there are from one to seven workable seams of coal. There are fourteen large mines, besides a number of less importance, now being actively worked. The total coal product of the State for the year exceeds 600,000 tons. The iron interests are being rapidly developed. Though the number of furnaces now engaged in the manufacture of iron is not nearly as large as in former years, the aggregate production is much larger. Four companies, having seven stacks, and using coke as fuel, are producing an aggregate of 500 tons of pig-iron per day. Five furnaces, which use charcoal for fuel, make about 112 tons daily. It is pretended by those interested in iron-making that iron can be made in Tennessee by the new processes, and put on the cars, at a price not exceeding the cost of the ore at Pittsburg, the difference being in the transportation of the raw material; and it is confidently anticipated that, when the manufacture of pig-metal

is fully developed, and the home market of rail-mills, rolling-mills, nail-mills, and foundries is created, the Tennessee furnaces can make iron from \$5 to \$7 per ton cheaper than those in Pennsylvania. The new hot-blast coke-furnace at South Pittsburg, owned by the Tennessee Coal, Iron, and Railroad Company, under the management of Mr. Warner, is reported to have made in June ninety-eight tons of iron in one day. This company has a capital of \$3,000,000, and owns three furnaces, with an average daily capacity of 200 tons. There is being built at Chattanooga a first-class 100-ton furnace, which will be in operation early in 1883. There are 4,326 manufacturing establishments in the State, employing a capital of \$20,092,845. In these factories there are employed 19,575 male adult and 1,196 female adult operators, and 1,764 children under fifteen years of age. The total annual wages

amount to \$5,254,775. The value of the materials consumed is \$25,710,125, and the value of the products is \$37,074,886. The unsettled financial condition of the State for many years past has undoubtedly retarded the development of manufactures; but the success of those which are in operation has proved that with her abundant stores of coal, iron, and timber, her immense water-power, and her contiguity to the great cotton-fields of the Southern States, manufacturing enterprise may be made profitable in Tennessee. At present, Nashville, Knoxville, and Chattanooga are the chief manufacturing places in the State.

**RAILROADS.**—The following tabular statement shows the length of the several railroads in the State; also the assessed value per mile; and the aggregate value of all the railroads in the State, compiled from the returns of the railroad assessors for September, 1882:

NAMES OF RAILROADS.	Number of miles.	Assessed value per mile.	Aggregate assessed value.
Alabama and Great Southern.....	4-85	\$11,998 75	\$58,170 00
Chicago, St. Louis and New Orleans.....	125-05	14,801 53	1,850,931 72
Chesapeake, Ohio and Southwestern.....	57-18	5,000 00	435,900 00
Cincinnati, Cumberland Gap and Charleston.....	40-17	5,275 71	211,925 53
Cincinnati Southern.....	1,514-86	17,686 46	2,678,867 75
Coal Creek and New River.....	1-00	3,800 00	3,800 00
Duck River Valley.....	96-67	3,551 00	130,215 05
East Tennessee, Virginia and Georgia.....	273-72	14,177 88	3,880,769 31
Knoxville and Augusta.....	16-81	3,204 88	52,263 40
Knoxville and Ohio.....	41-26	9,688 40	399,743 51
Louisville, Nashville and Great Southern— (Main stem and branches).....	428-59	14,221 49	6,095,187 01
Memphis and Charleston.....	108-00	12,405 02	1,339,742 45
Mobile and Ohio.....	128-84	15,670 00	2,006,141 67
Mississippi and Tennessee.....	13-06	17,081 95	222,437 27
Nashville, Chattanooga and St. Louis— (Main stem and branches).....	455-74	14,290 56½	6,512,707 28
Nashville and Tuscaloosa.....	21-79	2,908 21	63,370 00
Nashville and Florence.....	12-00	7,666 67	92,000 00
Nickajack.....	1-125	2,993 78	3,368 00
Oakdale and Cumberland Mountain.....	9-16	7,890 88	72,280 00
Rogersville and Jefferson.....	16-00	2,666 90	42,670 50
Tennessee Coal and Iron Railroad Company.....	24-00	10,000 00	240,000 00
Ship Island, Ripley and Kentucky.....	5-00	8,720 00	18,600 00
Western and Atlantic.....	22-00	27,519 07	605,419 67
Total.....	2,022-95		\$27,016,100 12

Average value per mile, \$13,354 80.

Increase of mileage over last report, 107-86 miles.

Increase of value over last report, \$10,640,205.72.

By the purchase from the State of Georgia of the Mason and Brunswick, and by its extension from Mason to Atlanta, thence to Rome and Dalton, Ga., the East Tennessee, Virginia and Georgia Railroad Company will soon control a continuous line from Norfolk, Va., to Brunswick. It also has branches from Knoxville to the Kentucky line, connecting with the Louisville and Nashville Railroad to Louisville, Ky., with the Selma, Rome and Dalton Railroad, to Selma, Ala., and Meridian, Miss., and with the Kentucky Central to Cincinnati; also a branch from Morristown to Paint Rock, on the North Carolina line, where it connects with the Western North Carolina Railroad through North Carolina to Wilmington. The total mileage directly under its control is 1,432 miles, but directly and indirectly it controls 2,170 miles.

**AGRICULTURE.**—Hitherto the agricultural methods in vogue in Tennessee have been very

primitive, and little attention has been paid to the fertilization of the soil or to improved modes of culture. Within a recent period marked improvement in this particular is perceptible, and when it becomes general the productive power of the arable lands in the State will be doubled. Recently some persons have turned their attention to the rearing of silkworms, and have succeeded encouragingly. The mulberry thrives in all parts of Tennessee, and the silk which has been produced is said to be of a very fine quality. The Swiss colonists at Grütli, on the Cumberland Plateau, have been especially successful in silk-culture. The colony at Rugby, which has been so often represented as a total failure, has been recruited by a number of thrifty families from Ohio, and is now showing signs of healthy vitality. Another thriving colony has been recently established at Allardt, in Fentress County, by fifty German families from Michigan. A small

German settlement has also been formed in Gibson County, which promises to be the nucleus of a much larger colony. Immigration, like every other enterprise involving the investment of labor and capital in Tennessee, has been materially retarded by the unsettled condition of the finances of the State, and the popular agitation to which it has given rise.

The Southern Sunday-School Association met at Tullahoma on September 17th, with a view mainly to the selection of a fixed place for the annual gathering of Sunday-school and Christian workers, in order to promote the education of the people in literature, arts, science, temperance, and all things conducive to their elevation religiously, morally, socially, and intellectually, after the manner, as far as practicable, of the meetings at Chautauqua. The selection of a location was left to a committee, who, after visiting several places, selected Monteagle, Tenn., in the vicinity of the University of the South, at Sewanee.

The Quadrennial General Conference of the Methodist Episcopal Church, South, met in Nashville, in May, and continued in session from May 3d to the 25th.

The following report of the Committee on Education, in reference to the educational wants of the negro population in the South and Southwest, was discussed and adopted:

Your committee have had under consideration that part of the bishop's address which relates to the claims of the negro population in the South and Southwest so far as their educational wants are concerned, and beg leave to submit the following report:

1. We note with pleasure the statement coming from so competent a source, that this people, upon whom our Church has in times past bestowed such labor, but who more recently in their changed relations have, for the most part, been turned away from us, are again becoming accessible to our ministry, and we heartily concur in the recommendation that the opportunity thus afforded to preach to their congregations be diligently improved.

2. To the claims of the Colored Methodist Episcopal Church in America, which sustains a peculiar and providential relation to the Methodist Episcopal Church, South, the address invites especial attention, chiefly for the purpose of determining what may be done by us to assist them in obtaining facilities for providing themselves with suitable pastors and teachers of their own race. They have no institution under their management for the education of those who are to occupy their pulpits and preside in their schools. Their preachers and teachers, if educated at all, must, for the most part, be educated by those who are not in sympathy with their organization. If they are to make any progress, or even to maintain their existence, they must provide for the education of those who are to take charge of their schools and religious congregations. Of themselves, they are not to do this; they have neither the money to establish schools nor the men competent to conduct them, and they look to us for aid.

As what we have done for them in setting them up for themselves creates the necessity of doing more for them, so this fact justifies the expectation on their part that we have not already done or are not now doing enough. Our people in the South have cheerfully borne their share in providing by general and special legislation for the educational wants of the colored race. We have endeavored to encourage in every way the promotion of common-school education among

them. But in the secular schools, their preachers and missionaries can not get the training essential to their work. The Colored Methodist Episcopal Church, which looks especially to us for encouragement and aid, is in pressing need at this point; therefore—

*Resolved*, That our bishops be authorized and requested to appoint, in consultation with the bishops of the Colored Methodist Episcopal Church, in America, a preacher or layman of our church, properly qualified for the work, who shall be a commissioner of education in aid of the Colored Methodist Episcopal Church in America, whose duty it shall be to solicit subscriptions, contributions, donations, and bequests, from whatever source he may find available, for the purpose of creating an educational fund for the benefit of said Colored Methodist Episcopal Church in America.

*Resolved*, That our bishops be also authorized and requested to appoint three members of our Church, who, together with the Commissioner of Education and three members of the Colored Methodist Episcopal Church, to be appointed by their bishops, shall constitute a Board of Trustees, for the custody and control of their educational fund when it shall have been raised.

*Resolved*, That the Commissioner of Education, herein provided for, be appointed a committee of one to see that the said Board of Trustees be completed in legal form by securing proper acts of incorporation.

All of which is respectfully submitted:

W. P. HARRISON, Chairman.

A proposition was made to change the name of the "Methodist Episcopal Church, South," to the "Methodist Episcopal Church in America," which gave rise to a long debate. On motion of the venerable Dr. J. B. McFerren, the matter was disposed of by directing that it be "referred by the bishops to the several annual conferences during the ensuing four years, and that they report the result of the note to the General Conference of 1886 for ratification."

The College of Bishops having been reduced by death and by the infirmities of some of the older incumbents, the Conference decided to elect five new bishops. Accordingly, Rev. Drs. A. W. Wilson, of the Baltimore Conference; John C. Granberry, of Vanderbilt University; Robert Kennon Hargrove, of the Alabama Conference; Linus Parker, of the Louisiana Conference; and Atticus G. Haygood, of the North Georgia Conference, were elected. Dr. Haygood declined to accept the office. The Conference determined not to elect any one in Dr. Haygood's place. The other four bishops-elect were ordained with impressive ceremonies at McKendree Church, on May 18th. The College of Bishops, as it now stands, consists of Rev. George F. Pierce, D. D., Rev. Hubbard H. Kavanaugh, D. D., Rev. Holland N. McTyeire, D. D., Rev. John C. Keener, D. D., Rev. A. W. Wilson, D. D., Rev. J. C. Granberry, D. D., Rev. R. K. Hargrove, D. D., and Rev. Linus Parker, D. D. Bishop Robert Paine, who was present at the Conference, though in very feeble health, died at his residence at Aberdeen, Miss., late in the autumn. During the session of the Conference the distinguished preacher, theologian, and author, Rev. Dr. Thomas O. Summers, of Vanderbilt University, died, after a short illness, at his home in Nashville.

The Eleventh Quadrennial General Conference of the Methodist Episcopal Church, South, will take place at Richmond, Va., in May, 1886.

**TEXAS. STATE OFFICERS.**—Governor, O. M. Roberts; Lieutenant-Governor, L. J. Storey; Secretary of State, T. H. Bowman; Treasurer, F. R. Lubbock; Comptroller, W. M. Brown; Attorney-General, J. H. McLeary; Commissioner of the General Land-Office, W. C. Walsh; Commissioner of Insurance, Statistics, etc., A. W. Spaight; Adjutant-General, W. H. King. United States Senators, Richard Coke and S. B. Maxey. Members of the Forty-seventh Congress: First District, John H. Reagan; Second District, D. B. Culberson; Third District, Olin Wellborn; Fourth District, Roger Q. Mills; Fifth District, G. W. Jones; Sixth District, Columbus Upson. Members-elect of Forty-eighth Congress: First District, Charles Stewart; Second District, John H. Reagan; Third District, James H. Jones; Fourth District, D. B. Culberson; Fifth District, John W. Throckmorton; Sixth District, Olin Wellborn; Seventh District, Thomas Ochiltree; Eighth District, J. F. Miller; Ninth District, Roger Q. Mills; Tenth District, John Hancock; Eleventh District, S. W. T. Lanham.

**GROWTH OF THE STATE.**—No stronger proof can be afforded of the wonderfully rapid growth of Texas during the past decade than that given by the last Congressional Apportionment Act, under which, at the election on November 7th, she was entitled to elect five additional Representatives in the Lower House of the Federal Congress. And not only has she grown in population, but her advance in everything that constitutes the material prosperity of a people has been equally rapid and equally great. In a vast territory which a few years ago was only accessible to the traveler on horseback, and at a serious risk of life from the tomahawk of the Comanche and the lawlessness of the desperado, the whistle of the locomotive, the church-bell calling to divine worship, the voice of the school-teacher, the hum of the machine-shop are now heard in every direction, and millions of acres of fertile lands, as profitless as if they were a desert, are now dotted with the homes of thrifty husbandmen, rewarding with abundant crops the intelligent industry which has subdued them to civilization. Where "they might take who had the power, and they might keep who can," was the law of property; where personal rights were defended only by the pistol and the rifle, and where the name of God was never heard but to be blasphemed, law and order now prevail, and the mandates of justice and of the preached word are heard and respected. In no State are the revelations of the last census as startling in their proofs of progress as they are in Texas.

**FINANCIAL CONDITION.**—In consequence of the increased valuation of property, the close collection of taxes, and the generally increased prosperity of the country, the receipts of the

State Treasury have exceeded the disbursements for the year. In order that this excess might not remain unproductive in the Treasury, while the outstanding bonded debt was drawing regular interest, the surplus revenue was used to purchase and cancel State bonds. In the reduction of the bonded debt, the appropriations made by the Legislature for sinking fund, surplus revenue, and a part of the proceeds of sales of public lands, have been used whenever a purchase on favorable terms could be made. No part of the above funds can be used for any other purpose than to retire outstanding bonds—the sinking fund being subject to investment by the Treasurer, and the surplus revenue by the Treasurer, with the advice and consent of the Governor and Comptroller. The total amount of bonds retired and canceled, according to the Treasurer's report of September 1, 1882, is \$958,290. The total outstanding bonded debt of the State on December 31st amounted to \$4,037,730, of which \$1,712,200 bear 6 per cent interest; \$1,254,000 bear 7 per cent; \$1,068,900 bear 5 per cent; and \$2,630 bear 4 per cent. Of this amount the special funds in the Treasury—the school funds, the university, and other funds—hold \$2,547,100, the interest on which is annually paid to those funds for the benefit of the State, leaving \$1,492,530 in the hands of individuals. The public credit is now so high that it has not been possible for the State to buy her 6 per cent bonds at less than 40 per cent premium. The bonds retired have been chiefly those which had the longest time to run to maturity, and bearing the highest interest. In the past three years the debt has been reduced, in round numbers, \$1,400,000, and the annual interest has been diminished \$140,000. The reduction in interest during the year has been \$65,950.60.

The balances in the Treasury to the credit of the several funds, on December 31, 1882, are as follow:

State revenue (currency).....	\$500,121 96
Common schools, university, asylums, and other special funds (currency).....	888,827 92
Common schools, university, asylums, and other special funds (bonds).....	4,927,510 12

Total balances in currency and bonds..... \$6,316,460 00

The ordinary necessary expenses of the State government for one year are as follow:

Executive office.....	\$29,700 00
State Department.....	24,785 00
Treasury Department.....	18,800 00
Comptroller's office.....	47,850 00
General Land-Office.....	55,060 00
Department of Insurance.....	10,800 00
Fish Commissioner.....	4,700 00
Adjutant-General.....	96,350 00
Attorney-General.....	11,260 00
Judiciary Department.....	376,525 00
Deaf and Dumb Asylum.....	85,950 00
Blind Asylum.....	27,050 00
Lunatic Asylum.....	55,000 00
Public schools—one fourth revenue.....	491,240 00
Quarantine.....	35,000 00
Interest on public debt.....	244,062 00
Sinking fund.....	50,754 00
Capitol-Building Commission.....	10,660 00

Total..... \$1,668,446 00

The Comptroller's estimate of annual revenue, at present rate of taxation (thirty cents on \$100 of value), *ad valorem*, poll and occupation taxes, based on the actual assessment for 1882, is as follows:

Ad valorem tax assessed for 1882.....	\$1,235,844 00
Revenue poll-taxes.....	146,518 00
Occupation taxes.....	626,000 00
From redemption of lands sold by State.....	50,000 00
Collections from insolvents.....	9,000 00
Ad valorem tax in unorganized counties.....	36,000 00
Special taxes.....	100,000 00
Office fees from several departments.....	100,000 00
Total.....	\$2,303,862 00
Expenses of assessing and collecting.....	338,891 00
Total net revenue.....	\$1,964,971 00

The Comptroller remarks, in reference to the above: "We may safely assume that our annual revenue, now flowing into the Treasury under our regular government system, is in net amount \$2,000,000. The annual increase, the rates of taxation and regularity of collections remaining constant, there will be at least 10 per cent annual increase in the *ad valorem* tax, or about \$125,000."

The present assured financial prosperity and the relief from the embarrassments which beset the government of Texas prior to 1879 are attributed chiefly to the provision of the Constitution of 1876 requiring the annual sale of lands for taxes. Since 1879 the State has had annually increasing surplus balances, notwithstanding successive reductions of taxes, and now the revenue system is so perfected that an almost exact calculation may be made as to the annual income, and expenses may be incurred under the guidance of settled experience. In financial estimates it is very difficult to determine with perfect accuracy the excess of cash in the Treasury, as an unexpended and reserve balance at any particular period; because there may be outstanding unpaid warrants that have not been presented for payment, representing, perhaps, large sums, and other numerous small considerations confuse as to exact results in estimates. But, by comparing the condition of the Treasury on August 31st, which showed a balance of \$526,545.62, and the balance on December 31st—\$500,121.96—it is fairly deducible that, if a balance fluctuating from \$500,000 to some sum in excess remains constant during a period of several months—all expenses of the government being promptly paid—an actual excess of revenue over expenditure of at least \$500,000 may be counted on. If, then, it be assumed that the further revenues for the year 1883 shall be sufficient to support the government under existing appropriations, and that all taxes for the year shall be collected and paid into the Treasury, amounting, according to the Comptroller's estimate, to \$2,000,000, there would be, on December 31, 1883, the increase of unused balance in the Treasury, of the difference between this amount and the aggregate of appropriations. To illustrate this mode of determining the cash balance in excess in December of next year:

Excess of cash on hand December 31, 1882.....	\$500,121 96
Receipts for 1883.....	\$2,000,000
Ordinary expenses of the government for 1883.....	1,668,446
Excess of receipts over disbursements.....	886,554 00
Total excess, December 31, 1883.....	\$886,775 96

This estimated balance will necessarily vary in proportion as the appropriations may be increased or diminished; but it shows to what extent extraordinary appropriations may be made without the necessity of borrowing money.

The policy of investing the special funds belonging to the public free schools, university, and asylums, as they accumulate from time to time, in State bonds purchased at 40 per cent premium, is seriously questioned, and by many earnestly condemned as a permanent loss to those funds; because when the period is reached when all the money that can belong to those special funds shall be deposited in the Treasury, if, in the process of investing those funds, there be consumed a part of the permanent funds in payment of premiums on the interest-bearing securities, the final consumption of the permanent fund will be inevitable. It is suggested that this could be obviated by the passage of a law directing the premium and costs paid for the interest-bearing securities in which the investments are made, to be paid out of the annual available fund, and not the permanent fund of those institutions. As stated on November 6, 1882, 500 State bonds, of \$1,000 each, bearing 7 per cent interest, belonging to the public schools, etc., were purchased at 40 per cent premium:

Bonds purchased.....	\$500,000 00
Premium paid.....	200,000 00
Commissions, etc.....	644 60

Total expended..... \$700,644 00

The following is a statement of the assessments of property in the State for 1882:

	Number.	Value.
Land, acres.....	94,157,501	\$177,760,740
City or town lots.....	.....	64,285,584
Railroads, miles.....	4,216	80,410,350
Telegraph, miles.....	7,639	280,243
Land certificates, acres.....	701,091	111,580
Steamboats, sailing-vessels, etc.	804	428,291
Carriages, etc.....	168,291	5,829,974
Tools, implements, machinery, etc.....	.....	5,804,266
Materials and manufactured articles.....	.....	408,382
Horses, cattle, sheep, hogs, etc.	.....	72,805,214
Goods and merchandise.....	.....	22,811,922
Money on hand.....	.....	9,794,312
Miscellaneous property.....	.....	22,199,618
		\$411,925,476
Add approximate assessment of lands in unorganized counties owned by non-residents.....	.....	8,000,000
Total value of property....	.....	\$419,925,476

The State tax is 30 cents on the \$100 of value. The county tax is limited by the Constitution to one half of the State tax. The poll-tax is \$2, of which \$1 and one fourth of the *ad valorem* tax constitute a part of the available school fund. The average value of lands is

\$1.89 per acre. The assessment of 1882 shows an increase of 11½ per cent over that of 1881. The special tax on occupations yielded, during the fiscal year, \$567,184.60.

**RAILROADS.**—Six or seven years ago the railways in Texas were comparatively few and short. Now, in 1883, she has 5,908 miles of railroad, running in every direction, furnishing highways for the transportation and markets for the sale of her produce and stock, bringing between \$30,000,000 and \$40,000,000 into the State, and opening to civilization and productive industry millions of acres of land, previously penetrated only by the savage or the fugitive from justice. Of the number of miles of railroad given above, 4,926 have been built within the last ten years; and 1,461 miles, costing \$44,525,000, within the year ending September 1st. The following are the railroad lines, and their extent, in operation in the State:

	Miles.
Missouri Pacific and Texas Pacific Railroads.....	590
International and Great Northern.....	837
Texas and Pacific.....	972
Galveston and Houston.....	50
Galveston, Harrisburg and San Antonio, and Mexican and Pacific Extension.....	985
Houston and Texas Central.....	788
Gulf, Colorado and Santa Fé.....	584
Texas and St. Louis (narrow gauge).....	805
Texas-Mexican (narrow gauge).....	176
Houston, East and West Texas (narrow gauge).....	125
Fort Worth and Denver City.....	114
Texas and New Orleans.....	105
Sabine and East Texas.....	104
New York, Texas and Mexican.....	92
Gulf, West Texas and Pacific.....	66
Austin and Northwestern (narrow gauge).....	60
Texas Western.....	57
Texas Trunk.....	35
Rio Grande and Pecos.....	26
Rio Grande.....	22
Texas Transportation Company.....	8
Atchison, Topeka and Santa Fé (in Texas).....	8
Missouri, Kansas and Texas (in Texas).....	5

Total miles of railroad December 1, 1882..... 5,974

Suit was instituted in the District Court, last March, by the State against the International and Great Northern Railroad Company, seeking a forfeiture of its charter, and of the land grant of twenty sections per mile for the road between Jefferson and Laredo, for alleged failure to construct the road as required by the charter—that is, “at the rate of at least forty miles each year, or of eighty miles every two years.” The court decreed that the land grant be adjudged forfeited upon all the railroad between Jefferson and Laredo, not completed at the filing of the suit, viz., from Austin to Laredo, and from a point north of Longview to Jefferson.

**THE CAPITOL.**—The new Capitol, now in process of construction at Austin, will be one of the largest and handsomest public buildings in the United States. It will be built of fossiliferous limestone, found in large quantities in the immediate vicinity. The interior will be finished with various kinds of Texas marble. The basement-floor will consist of fifty-one rooms, to be occupied by the Comptroller's and Treasurer's department, specie-vaults, and heating apparatus. The second floor will be

set apart for the Senate and House of Representatives, Governor's reception-rooms, portrait-gallery, library, committee-rooms, etc. The third floor will be occupied by the State House and judicial officers, court-rooms, judges' rooms, Attorney-General's and Marshal's office, etc. The fourth story will consist of a number of rooms not yet designed for any specific purpose. The whole will be surmounted by a dome, which, it is said, will be the highest in America. The estimated cost of the material and labor will be \$1,480,000; but it is supposed that it will cost fully \$2,500,000 to complete it. The contractors are to receive for the building, when finished according to the plans, 3,000,000 acres of land, situated in the extreme northwestern part of the State, in what is known as the “Pan-handle.” The dimensions of the building, at greatest measure, are 566½ feet long by 288 feet 10 inches wide. The dome will be 311 feet high. The excavations were commenced on February 1st. The contractors—the Rock Island (Illinois) Syndicate—have agreed to have the building “fully completed and delivered on or before January 1, 1888.” The lands to which they will be entitled when the Capitol is completed could be readily sold for \$1.50 per acre, so that really the cost of the buildings, at the present price of the land, will be \$4,500,000, and it is probable that by January, 1888, the lands will be worth fully fifty per cent more than at present.

At the extra session the sum of \$50,000, and the material of the old burned Capitol, were appropriated to purchase or erect suitable temporary buildings for the Executive, judiciary, and Legislature of the State. Just after the stone-work of the building was finished, and the roof placed upon it, a severe wind and rain storm caused a large portion of the walls, which the contractor had failed to bond, to fall. When this happened, \$27,300 of the \$50,000 had been already expended, leaving only \$22,700 to repair the damage and complete the building. The contractor went forward, finished the work, and now trusts to the next Legislature to reimburse him.

**BOUNDARY-LINE.**—The long unsettled question as to the boundary-line between Northern Texas and the Indian Nation has been revived by the researches reported by Mr. John M. Swisher, acting as agent on the part of Texas. The dispute arises, it is said, from the fact that the United States Commissioner recognized the *South Fork* of the Red River as the continuation of that stream, while the Texas authorities have always held that the *North Fork* is the true river. Several successive Legislatures of Texas have affirmed the claim of the State to the territory known as Greer County, which lies southeast of the Pan-handle, between the North and South Forks of Red River, and it is asserted in support of this claim that, although the bed of the South Fork is more extended than that of the North Fork,

it is often dry, while the latter has an unceasing flow of water. Congress has been asked to settle the boundary by law. The fact that Indian reservations have been defined up to the line of the North Fork, that none have been laid off south of that line, in Greer County, and that that county has been set apart by Texas statutes for specific purposes, would seem to argue that the General Government has doubts as to the validity of its claim. The Legislature, at its extra session, provided for the settlement of the controversy by appointing a commissioner to trace the boundary-line in conjunction with a commissioner on the part of the Federal Government.

**EXECUTIVE AND LEGISLATIVE AFFAIRS, ETC.**  
—The Governor called the Legislature to meet in extra session on April 6th, to reapportion the State into congressional districts, the Apportionment Act of Congress having given Texas five additional Representatives; to provide a temporary Capitol, the old Capitol having been accidentally burned in November, 1881; to authorize necessary improvements in the Lunatic Asylum; to make provision for a new lease of the penitentiaries at the expiration of the existing lease at the close of this year; to take action as to the government and funds of the University of Texas and its branches; to legislate for the disposition of the public lands; to pass laws for the regulation of the railroads in the State; and to reduce taxation as far as may be consistent with the support of an efficient State government.

The convention of the Democratic party met at Galveston, in July, to nominate State officers. The choice fell on John Ireland for Governor; Marion Martin for Lieutenant-Governor; W. J. Swain for Comptroller; F. R. Lubbock for Treasurer; John D. Templeton for Attorney-General, and W. C. Walsh for Commissioner of the General Land-Office, all of whom were elected by large majorities. The congressional elections resulted in the return of ten Democrats and one Independent (Mr. Ochiltree).

**STATE AFFAIRS.**—The political contest was between the Democrats proper and a coalition of Republicans, Greenbackers, and Independents. The failure of the Galveston Convention to renominate Governor Roberts disaffected some Democrats and caused Mr. Ireland to run behind the rest of the ticket. The greatest interest was felt in the congressional contest between Hancock and Davis in the Tenth District, Finlay and Ochiltree in the Seventh, and Culberson and Dohoney in the Second. The wool-growers, who are in favor of a high protective tariff, opposed Mr. Hancock, who was pronounced in favor of a "tariff for revenue only." His opponent, Mr. E. J. Davis, Governor of Texas in the time of reconstruction, was pledged to support protection on wool and woolen goods. The canvass was animated and energetic, but generally peaceable.

The creation of the Commission of Appeals,

to aid the Supreme Court and the Court of Appeals in civil cases, has produced a marked improvement in the greater dispatch of judicial business, thus preventing the unreasonable delays which have been so long a just cause of complaint. The inferior courts, too, have been much improved by the appointment to the bench of lawyers of greater ability, experience, and integrity.

In the exercise of Executive clemency, Governor Roberts has been controlled by the purpose to make good conduct and reformation in the Penitentiary the main ground of commutation of the penalty or of pardon, teaching the convict to rely on self-effort rather than outside influence. On account of the facility afforded criminals to cross the Rio Grande to escape arrest and prosecution, the Governor constituted all the county and district judges whose jurisdiction reached that river "extradition agents" on the part of Texas; and, upon communicating the fact to the Governors of the border States of Mexico, assurances were received that those officials would take similar action on their side of the line. Since this was done no trouble has occurred. The Frontier Battalion and Special Police Force have done good service in arresting criminals and preserving peace and good order in the western and southwestern parts of the State. The Indian depredations have practically ceased altogether. The expense of this force has been reduced during this year to \$60,000.

The quarantine regulations for the protection of the people against yellow fever have been systematized and much improved, while all proper precautions have been taken not to obstruct commercial intercourse with tropical countries.

Mr. A. W. Spaight, the Commissioner of Insurance Statistics and History, prepared and published during the year a very valuable and interesting book upon the "Resources, Soil, and Climate of Texas," in which every county is fully described. An admirable descriptive map is affixed to the work. Existing law authorizes the Governor to appoint a "State Engineer," who shall have the right to compel all railroads that connect with each other in the State to make their connections regular and proper, so as to accommodate the traveling public on said roads, and the right and power to compel the railroad companies to draw the passengers and freight of each other on their respective roads; and, upon a refusal to comply, the Engineer is empowered to take charge of the contumacious road and its rolling-stock, and report it to the Governor, who shall then order that the road shall be run for the benefit of the State, until arrangements are made for compliance with the law. But, as the Legislature made no appropriation for the payment of the salary and expenses of the Engineer, or for the cost of taking charge of and operating a railroad, the law is a dead letter. Several of the Texas railroads are reported to be in

default in the payment of the interest on their indebtedness to the Public Free School Fund. The account of the railroad companies with the Permanent Common-School Fund is computed in the Comptroller's report up to May next year, and is as follows:

COMPANIES.	Amount of debt.	Interest due.	Sinking fund.
Houston and Texas Central Railroad..	\$511,250 99	\$15,333 42	\$5,112 80
Washington County Railroad.....	86,655 90	20,797 34	6,932 41
Galveston and San Antonio Railroad.	506,252 32	15,187 56	5,062 52
Texas and New Orleans Railroad....	506,465 87	15,193 97	5,064 65
Texas and Pacific Railroad.....	172,773 75	5,133 31	1,727 13
	\$1,733,428 83	\$71,700 50	\$23,900 11

The Washington County Railroad has been in default since November 1, 1879.

**EDUCATIONAL.**—The permanent fund of the public free schools has increased by the sale of its lands from \$1,629,000 to \$5,361,000 on December 31st, with a probable increase within a short period of upward of \$1,000,000 by the sales of the reserved lands. The lands belonging to the Permanent Common-School Fund, as estimated by the Commissioner of the General Land-Office, amount to 33,000,000 acres. In addition to this, four leagues (17,712 acres) of land are set apart to each county for school purposes, aggregating 4,002,912 acres. The annual interest on purchase-money notes received for land belonging to the available school fund is \$227,390.86. The estimated annual amount set apart for the support of the public schools is \$491,240, derived from one fourth of the general revenue, all the annual poll-tax levied for school purposes, and all the interest on the Permanent School Fund, including bonds and other interest-bearing indebtedness, belonging to the Permanent School Fund.

The amount apportioned in cash to the several counties, cities, and towns, for the scholastic year was \$1,086,273. The free schools have been much improved during the year. The duration of the term of instruction has been increased, and the scholastic population, between the ages of eight and fourteen years, shows an increase of 10 per cent, being, in 1882, 295,344. Two normal schools have been established, one for white pupils—the Sam Houston Normal Institute at Huntsville, Waller County—and one for colored pupils, the Prairie View Normal School, near Hempstead, Walker County. At these schools, one hundred and fifty-five white and forty-three colored students have been trained and educated to become teachers in the public free schools, and their expenses for tuition, board, books, etc., have been defrayed by the State. The Peabody Educational Fund has contributed liberally to both these schools. Normal institutes have been held during the summer, which have been numerously attended by the teachers throughout the State. It is proposed to offer for sale,

at a long credit, the lands set apart for educational purposes, fixing the minimum price at two dollars per acre. The failure of the Legislature to adopt the recommendation of Governor Roberts to raise the minimum price of these lands from fifty cents to at least one dollar per acre, has resulted in a sacrifice of millions of acres of these school lands. Since the adjournment in May of the special session of the Legislature, which refused to pass a bill to protect these lands, up to December 31st, applications have been filed for 6,350,480 acres, at fifty cents per acre. It appears from the report of the General Land Office, made in March, that the public lands, including reservations, are barely sufficient to meet the outstanding land-scrip. An idea may be formed of the lavish way in which these lands have been granted, from the single instance of the grants to the Texas and Pacific Railroad Company, amounting to nearly 5,000,000 acres of land, now selling for from one dollar to five dollars per acre, according to location and quality. The commissioner estimates the vacant and unappropriated lands at 15,953,730 acres, and the certificates as calling for 22,900,480 acres, leaving a deficiency of public land of 6,946,750 acres.

The University of Texas comprises the main college at Austin, the Medical College at Galveston, the Agricultural and Mechanical College at College Station, on the Houston and Texas Central Railroad, in Brazos County, and a branch for colored students, for the establishment of which initial steps have been taken. The munificent endowment of this as yet inchoate institution consists of 1,219,900 acres of the public lands, cash, land notes, and State bonds, amounting to \$503,364.30, provided by the Constitution and laws for its maintenance, and the proceeds of the sale of the public lands donated to the Agricultural College by the Federal Congress in 1862, amounting to \$209,000. The first of a number of buildings on a grand scale is now in course of construction, and, it is expected, will be completed by the middle of the summer of 1883, so that the college can be put in operation by September of next year. The corner-stone of the building was laid by the Masonic order with impressive ceremonies, on November 22d, in presence of the Governor, the other prominent officials, and a large concourse of people from all parts of the State. The structure will occupy the center of the plateau set apart for the university-grounds. The main frontage will be toward the south, with a length from east to west of 280 feet, and a depth from south to north of 195 feet, exclusive of wide porticoes. The entire building will be four full stories in height, providing ample and well-arranged rooms for all the purposes of a college of the first class.

When inaugurated, the law of its creation requires that male and female students shall be admitted on equal terms, and that no other charge shall be made than an initiation fee,

which is limited to \$30. It is believed that the present endowment of the university will be largely increased by additional appropriations, so as from the beginning to insure the establishment of a university of the first class on a firm foundation. The Agricultural and Mechanical College, formerly a literary high-school, has been made an agricultural and mechanical college in reality, instructing the students in the science and art of agriculture, in the mechanic arts, and in natural science generally. Tuition is free, and board is given at the low rate of \$130 for the scholastic year; and, in addition, the board expenses and books of 93 students, selected by competitive examination from the 31 senatorial districts, are paid by the State. The number of matriculants on December 31st was 200. The present outfit of this college is very insufficient, both in farm machinery and in stock. The directors of the institution, in their last report, point out these deficiencies, and ask for an appropriation of \$50,000 to purchase a well-stocked and fully equipped farm, and additional tools and mechanical appliances for the workshops. Means are also asked to provide quarters for 200 additional students. The State Democratic Convention, at Galveston, adopted the following in relation to the public schools as a part of their platform:

We favor the fullest education of the masses, white and colored, in separate common schools, and the advanced education of the youths of the country in our higher schools and State University. We favor the maintenance of normal schools for the instruction of teachers.

We favor the submission to the people of a constitutional amendment authorizing the levy and collection of a special school-tax, separate from the general revenues, to the end that an efficient system of public free schools may be maintained, and that the State tax may be reduced to the actual necessities of the State government.

We favor the protection of the public school lands of the State from waste and sacrifice, and pledge ourselves to secure returns from said lands, commensurate with the real value of the same.

There are a number of well-conducted and numerously attended colleges—mostly denominational—and private academies throughout the State, the principal of which are, the Methodist College, at Fredericksburg, Gillespie County; Marvin College, at Waxahachie, in Ellis County; male and females colleges at Goddard and Sherman; Woodland Female College, at Paris; Trinity University (Presbyterian), at Tehuacana Hills, and Polytechnic Institute, at Mexia, Limestone County; Waco University (Baptist), and Female College (Methodist), at Waco; Southwestern University (Methodist), and Round Rock College, at Georgetown, Williamson County; and Soule University and Chapel Hill Female College in Washington County. The Methodist denomination are about to establish a college at San Saba.

STATE INSTITUTIONS.—There are two State Penitentiaries, one at Huntsville, Walker County, and one at Rusk, Cherokee County. The

policy of the Legislature with regard to these institutions is to provide as far as practicable for the accommodation and profitable employment of the convicts *within* the walls of the Penitentiary, and abandon, gradually, the practice of leasing the convicts for *outside* labor. At the close of this year, the two penitentiaries were leased for fifteen years from the 1st of January, 1883, for \$10,000 per annum for each, commencing with 300 convicts at Rusk, to be increased in equal numbers each year, until the number reaches 800 at the end of the third year, and with 400 convicts at Huntsville, increasing to 600 by the end of the third year. About 900 convicts, in numbers not less than 60, were leased on August 15th for five years to individuals for work on farms, at an average of \$15 per month for each convict, yielding, after paying cost of guards, etc. (about \$9), a net revenue of \$6 per month for each convict. The lessees of the two penitentiaries assume and agree to carry out these contracts for farm-labor made by the State. The convicts are said to be well fed, clothed, and lodged, to be humanely treated, and worked for not more than ten hours per day. The net proceeds of the lease of the convicts, according to the last report made in 1882, amount to \$255,134.47.

The Asylum for the Education of the Blind, and the Institution for the Deaf and Dumb, at Austin, have been well managed and efficient, as far as the means appropriated for their support and enlargement would permit. The Asylum for the Insane is totally inadequate to accommodate even one half the applicants for admission, who are now confined in the jails, homes, and log-cabins in all parts of the State. Credible persons state that in many places, families too poor to hire nurses or keepers have confined their insane relatives in pens, feeding them, like wild beasts, through the spaces between the logs, and that many of these unfortunate people have perished from want of proper care and ordinary good treatment.

One hundred and one thousand, nine hundred and four acres of the public lands have been set apart to each of the State asylums—Deaf and Dumb, Blind, Insane, and Orphans' Asylum.

EXPORTS OF PRODUCE.—The following is an exhibit of the value of the products of Texas actually exported during the year ending August 31, 1882:

Cotton, 878,854 bales.....	\$50,094,678
Wool, 22,299,652 pounds.....	5,128,919
Hides, 13,572,795 pounds.....	1,627,785
Cattle, 681,367 head.....	16,654,070
Horses and mules, 43,724 head.....	1,098,100
Cotton-seed, cake, and oil.....	2,485,740
Sugar and molasses.....	725,394
Miscellaneous.....	8,427,568
	\$81,238,554

The falling off in the cotton-crop of 1881-'82, as compared with the previous year, amounted to 381,393 bales.

The cattle, sheep, and wool interests of Texas are second only to those of agriculture, and

embrace directly and indirectly fully one third of the State. Within the year, with improved facilities of transportation and the demands of an increased population, the value of cattle has doubled. At present sheep are only raised in Texas for their wool—very few for mutton. This is caused by the cost of transportation. It is estimated that there are now 7,000,000 sheep in the State; hence, allowing four acres to each sheep, 28,000,000 acres of land are used as sheep-walks. The wool-clip of this season received at San Antonio was 5,700,000 pounds. Great improvements have been made within the last twelve months in the management and handling of cattle in Texas, and the grade is constantly improving by the introduction of blooded stock. The present price of beef-cattle ranges from \$25 to \$35. Ten years ago the same class of cattle were sold for from \$12 to \$15.

The business of the port of Galveston for the commercial year ending August, 1882, has been much greater than was anticipated. The partial failure in the corn-crop and a heavy falling off in the cotton-crop were calculated to lessen the volume of commercial transactions. While the money value of the State's exports for the year is in excess of that of the year previous, so much of the surplus went forward to purchase meat and breadstuffs, stringency in commercial matters was expected; but the year has passed without any disaster worthy of record. Of the 878,854 bales of cotton produced in the State, 476,891 were exported from Galveston. Though the sugar-crop was light, the receipts of consignments from plantations direct to Galveston have been larger than in any previous year, amounting to 8,000,000 pounds. The consignments of wool amounted to 218,280 pounds. Of molasses, 255,598 gallons were received. The trade of the city of Houston during the year amounted in value to \$22,786,481.

TROLLOPE, ANTHONY, an English novelist, died December 6th. He was born April 24, 1815. His mother was the talented authoress of "Widow Barnaby," whose caustic reflections on American manners, written after a long residence in the United States, did much to protract the estrangement between American and English society. Anthony Trollope was educated at Winchester and Harrow Schools. He obtained a clerkship in the Post-Office, with which department he was connected for the best part of his life. His business faculty and power of work were so remarkable that he pursued an honorable career in the public service parallel to his assiduous and prolific literary activity. He took a prominent part in the development and direction of the postal service in Ireland, and in later life was intrusted with the negotiation of intricate postal arrangements with various European governments. He commenced to write novels as a distraction from his official labors. Of his earlier novels there were republished and acknowledged the

"Macdermotts of Ballycloran" and the "Kellys and O'Kellys," published in 1847 and 1848. The first work which brought him fame and substantial pecuniary returns was "The Warden," followed by a continuation, "Barchester Towers," usually accounted his finest production. These are life-like pictures of the social and domestic life of the English clergy. They were followed by a stream of others, all in the same realistic vein, and nearly all treating of the life of the upper classes of English society, gradually extending in their range of subjects from the clergy to the country gentry and nobility, and then to the dissipations of town, and in his later novels, with less success, to political society. Characters which he drew with pains and success he often reintroduced in succeeding works. His remarkable powers of observation, which enabled him to write with accurate knowledge of the daily habits and professional practices appertaining to the various classes of people which he introduced in his fictions—clergymen, country gentlemen, sportsmen, officers, lawyers, doctors, merchants, or politicians—enhance the air of reality which pervades his novels. Anthony Trollope was probably the most prolific writer of fiction in the English language. His style and method are the same throughout, though the merits of his works vary widely. The quality of each individual work is remarkably even, those which were originally well conceived being worked up with care, and not marred through errors in dramatic judgment or negligence in literary workmanship. The most widely read of his novels, besides those mentioned above, are "Dr. Thorne," "The Bertrams," "The Three Clerks," "Castle Richmond," "Framley Parsonage," "Orley Farm," "The Small House at Allington," "Rachel Ray," "Miss Mackenzie," "The Claverings," "The Last Chronicle of Barset," "The Duke's Children."

Although Trollope dwelt more on the external aspects of society, some of his characters, such as Mrs. Proudie, the Warden, Rev. Mr. Crawley, Palliser, Dr. Thorne, the Duke of Omnium, Scatcherd, etc., are as clearly conceived and strongly drawn types as those of any of the analytical novelists. Besides his double work as author and official, Anthony Trollope was a keen hunter, and found leisure to indulge freely in this British pastime, and also to travel when his strength needed recruiting. His practical knowledge and power of observation enabled him to write, after his brief trips to America, Australia, and South Africa, some of the best books of travel, particularly his volume on "The West Indies and the Spanish Main." His biographical studies of "Julius Cæsar" and "Cicero" were less within the scope of his acquirements. He wrote also an admirable memoir of Lord Palmerston.

TUBERCULOSIS, BACTERIAL ORIGIN OF. It has been suspected, since the discov-

ery of the fungoid origin of various infectious and epidemic diseases, that tubercular disease was also caused by microphytic germs. Investigators in this new branch of etiology studied this disease particularly for a year or two. Its infectious character was established, but its bacterial origin could not be proved by the usual test of inoculation from infusions. Dr. Robert Koch, who had already performed distinguished services in this field, finally succeeded in detecting the specific bacterium. He found a characteristic and previously unknown bacillus in all tubercularly altered organs. They are very slender, and have a length of from one quarter to one half the diameter of the red corpuscles of the blood, rarely as great as the whole diameter. They resemble the *Lepra bacilli*, but are not so thin, nor, like them, tapering at the extremities. Wherever the tubercular process is in its early and active stage, these bacteria are present in great numbers, crowded together in small, dense groups, often forming regular bundles. These groups frequently occupy the interior of the cells. On the outside of the cheesy new-growths great numbers of single bacilli are observed. When the climax of the tubercular eruption is passed, they decrease and may totally disappear.

This characteristic bacillus is found in pulmonary tuberculosis, cheesy bronchitis and pneumonia, tubercles of the brain, intestinal tubercles, scrofulous glands, and fungous inflammation of the joints. It is present in all cases of spontaneous consumption in animals, having been observed in cattle, hogs, poultry, monkeys, porpoises, and rabbits. In monkeys dead of consumption the bacilli were found in countless bunches pervading the lungs, spleen, liver, diaphragm, and lymphatic glands. This bacterium has no motion except the motion of growth. Its life-period is only a few weeks. Koch supposes that the germs attach themselves to the floating particles of the air, and are inhaled with these into the lungs, and that this is the usual manner of infection. They get into the air, as he surmises, from the expectorations of phthisical patients, in which he also found the bacilli. As the dried bacilli were found to retain their fertility for weeks, the dried sputum of consumptives can spread the seeds of disease far and wide through the air.

This discovery must have an important influence on the diagnosis and treatment of consumption. It is the first infectious disease of human beings which has been positively proved to be of parasitic origin. The prophylactic precautions suggested by Koch's discoveries are very promising. Unlike the anthrax bacillus, the specific germ of tuberculosis thrives only in the living body. The sputum of consumptives should be carefully disinfected; and, since the identity of *Perleucht* of domestic animals and the tuberculosis of human beings has been established, the meat and milk

of infected animals ought to be inspected and destroyed.

TURKEY, an empire in Europe and Asia. The fundamental laws are derived from the precepts of the Koran and the *Multeka*. When not in conflict with the sacred Mohammedan laws the will of the Sultan is absolute. The Constitution proclaimed by Abdul-Hamid, December 23, 1876, is modeled upon European forms of government; but, like the previous Constitution of Sultan Abdul-Medjid, it has not been carried into effect.

The reigning Sultan is Abdul-Hamid II, born September 22, 1842, who succeeded to the throne upon the deposition of his brother Murad, August 31, 1876. Murad, who was declared by the Council of Ministers to be an imbecile, had succeeded his uncle, Abdul-Aziz, deposed May 30, 1876, on a similar pretext. Abdul-Aziz died soon after in consequence of an act of violence, which was officially reported to have been committed by his own hand. Abdul-Hamid is the thirty-fifth in descent of the house of Othman. The crown descends to the oldest male member of the imperial family. All children born in the harem of free women or of slaves are legitimate and equal in rank. The inmates of the harem are usually brought from abroad, most of them from Circassia. A certain number, usually seven, are chosen by the Sultan as *Kadyn*, or Ladies of the Palace; the rest, called *Odalik*, serve these in the capacity of servants. The chief of the guard of eunuchs is equal in rank with the Prime Minister, or Grand Vizier.

The executive and legislative authority is exercised under the Sultan by the Grand Vizier, who is the head of the temporal Government, and the *Sheik-ul-Islam*, who is the chief interpreter of the Koran and head of the *Ulema*, or council of learned men summoned to debate and expound the laws.

The Ministerial Council of the Sublime Porte was composed at the end of 1882 of the following persons: Said Pasha, Grand Vizier and Minister of Foreign Affairs; Akif Pasha, President of the Council; Ghazi Osman Pasha, Minister of War; Hassan Pasha, Minister of Marine; Mahmud Nedim Pasha, Minister of the Interior; Djevdet Pasha, Minister of Justice; Munir Bey, Minister of Finance; Subhi Pasha, Minister of Commerce and Agriculture; Mustapha Pasha, Minister of Public Instruction; As-sym Pasha, Director of *Vakufs* (sacred property); Hassan Fehmi Effendi, Minister of Public Works; Ali Saib Pasha, Chief of Artillery.

The *Sheik-ul-Islam* is Ahmed Essad Effendi. The *Kizlar Agassi*, or chief of the eunuchs, is Hafiz Bahram Agha.

The empire is divided into *vilayets*, which are subdivided into *sandjaks*, and these into *kazas*. Over each *vilayet* is placed a *vali*, or governor, who is assisted by a council.

AREA AND POPULATION.—The area of the Turkish Empire in Europe, Asia, and Africa, before the war of 1877-'78, was estimated to

be 1,742,874 square miles. The estimated population was 28,165,000. By the creation of the independent tributary state of Bulgaria, and the autonomous province of Eastern Roumelia, the delivery of Bosnia and Herzegovina to Austrian administration, and the cessions of territory to Roumania, Servia, Montenegro, and Greece, the area of the dominions under the rule of the Sultan in Europe was reduced from 138,264 to 56,868 square miles, and the population from 8,315,000 to 3,982,000. The total area of the dominions immediately subject to the Sultan in 1882 was 3,087,850 square kilometres, or about 1,180,000 square miles, though the authority of the Government is weakened in parts of Asiatic Turkey. The total population of the immediate possessions was estimated at 21,633,000. The total area of the vassal, tributary, and nominally subject states and provinces was 3,148,400 square kilometres, about 1,200,000 square miles; total population, 20,580,400. The area, in square kilometres, and population of the divisions of the Ottoman Empire, including the tributary and nominally dependent states, are given in the following table:

POSSESSIONS.	Area.	Population.
Immediate possessions in Europe	165,498	4,490,000
Eastern Roumelia.....	35,901	85,951
Bosnia and Herzegovina.....	61,065	1,158,440
Sandjak of Novi-Bazar.....	63,972	108,000
Bulgaria, tributary principality....		1,998,988
Total Turkey in Europe.....	326,376	8,681,400
Immediate possessions in Asia...	1,589,055	16,182,900
Samos, tributary principality.....	468	39,108
Total Turkey in Asia.....	1,589,523	16,172,000
Vilayet of Tripoli.....	1,083,850	1,010,000
Egypt, protectorate.....	2,987,000	16,400,000
Total in Africa.....	4,020,850	17,410,000
Total Ottoman Empire.....	6,236,250	42,213,400

The approximate population of the chief cities of Turkey in Europe is as follows: Constantinople, between 600,000 and 700,000; Salonica, between 60,000 and 80,000; Adrianople, from 60,000 to 62,000; Philippopolis, 24,053; Serajevo, 21,377. The approximate population of the chief cities of Turkey in Asia was as follows: Smyrna, 150,000; Damascus, 150,000; Aleppo, 70,000; Beyrut, from 60,000 to 70,000; Brussa, 60,000; Erzerum, 60,000; Kaisarié, 60,000; Bagdad, 40,000; Mosul, 40,000; Manissa, 40,000; Sivas, from 35,000 to 40,000; Marash, 35,000; Trebizond, 32,000; Urfa, 30,000; Van, 30,000; Jerusalem, 28,000; Amassa, 20,000.

Fully one half of the population of Turkey in Europe, about 17½ per cent of the population of Turkey in Asia, and 1 per cent of that of the African possessions, altogether about 23 per cent of the Sultan's subjects, are Christians or Jews of the various Oriental and Occidental rites. The heads of the different Churches, especially the Greek and Armenian Patriarchs,

as well as the High Rabbi of the Jews, are dignitaries possessing much power and influence, being recognized as chiefs of their religious communities by the Ottoman Government. The Patriarch of the Greek Orthodox Church is Joachim III. The Exarch of the Bulgarian branch of this Church is Yossif. The name of the Patriarch of the Orthodox Armenians is Narses; of the Patriarch of the Catholic Armenians, Azarian; of the civil head of the Latin community, O. Varthalites Effendi; of the Protestant community, Agop Effendi. The Chacham Bashi, or Grand Rabbi, of the Hebrews is Moses Levi Effendi. The Latins, or Christians using the Roman liturgy, consist of Greeks, Armenians, Bulgarians, and Croats. The Maronites, the Melchite Greeks, the Latins, and the United Syrians have patriarchs residing at Antioch. The Patriarch of the Chaldeans resides at Mosul.

COMMERCE.—The average value of the import trade is estimated at \$104,000,000; the average total export trade at \$96,000,000. Constantinople receives about \$48,000,000 of the imports and ships about \$34,500,000 of the exports. The leading articles of export are cereals, tobacco, wools, opium, meerschaum, oil of rose, gum, and skins, besides cotton, which began to be cultivated in 1860, fruit, wine, honey, wax, morocco leather, madder, carpets, etc. The commercial intercourse is mainly with Great Britain, Italy, Austria, and Greece.

The principal ports, next to Constantinople, are Smyrna, Chio, and Salonica. The total number of arrivals in all the ports in the year ending March 1, 1879, was 183,730; tonnage, 19,513,559, against 12,810,003 tons in 1877-78. The number of steamers arriving in 1878-79 was 20,174; tonnage, 13,978,439. The movement of shipping in the port of Constantinople in 1880 embraced 12,532 sailing-vessels, of 1,201,546 tons, and 4,787 steamers, of 3,616,636 tons. Of the steam tonnage about 47 per cent was English, 13 Russian, 12 Austrian, 10 French, 5 Turkish, and 2 Greek; of the other tonnage about 41 per cent was Greek, 31 Turkish, 15 Italian, 6 Austrian, and 2 Russian. The merchant marine consisted in 1879 of 220 sailing-vessels, of 34,500 tons, and 11 steamers, of 3,350 tons, engaged in foreign trade. Including coasting-vessels, the total tonnage was 181,500.

The first railroad in Turkey was built in 1865. At the beginning of 1877 there were 965 miles in operation in European Turkey, and 172 miles in Asia Minor.

The length of telegraph lines in 1879 was 17,950 miles; of wires, 31,782 miles. The number of dispatches in 1878 was 1,344,702, of which 523,230 were domestic, 291,453 international, and 530,019 official. The receipts amounted to about \$1,200,000, working expenses \$970,000.

The post-office, previous to 1876, was entirely managed by foreigners. In September

of that year the Government established an international post-office. The number of letters in 1874 was 2,439,000, including postal-cards; of printed inclosures, 75,000; of newspapers, 1,250,000.

**ARMY.**—A plan for the reorganization of the army was confirmed by the Padishah in the latter part of May, 1880. According to this scheme, which is being carried out as rapidly as possible, the army is divided into the Nizam, or active army, the two bans of the Redif, corresponding to the German Landwehr, and the Mustafiz, corresponding to the Landsturm. The total period of military service is twenty years: three years of active service in the regular infantry, and four in the other arms; three and two years respectively in the active army reserve; four years in each ban of the Redif; and six years in the Mustafiz. The empire is divided, as formerly, into seven military districts. Each of these furnishes a corps in the active army, and one in each ban of the Redif, except the seventh, Yemen, which furnishes the active corps only, and that only for service within the boundaries of the province. The militia forces of Crete and of Tripoli are not embraced in the organization. Each of the 18 corps consists of 2 divisions of infantry, 2 brigades of 2 regiments in each division; 2 battalions of riflemen; 1 division of cavalry, consisting of 3 brigades of 2 regiments each; 1 regiment of field artillery; and 1 battalion of pioneers, besides the train, a company of telegraphists, and the commissary and sanitary services. Each infantry and cavalry regiment has its depot. The full war effective of the active army, when completely organized, will be, excluding the depot and local troops, as follows:

NIZAM.	War footing.
Infantry.....	468,000
Cavalry.....	64,800
Artillery.....	57,600
Pioneers.....	10,800
Train.....	9,000
Total.....	610,200

The actual strength of the active army, as far as the organization had proceeded in 1881, was 10,311 officers, 150,106 men, 26,140 horses and beasts of burden, and 650 pieces of artillery. Of the two Redif armies only 40 of the 384 battalions existing in *cadre* were under arms. The total nominal strength of the army, according to the new organization scheme, is 1,208,000 men. The Christian population are not liable to arms, and the inhabitants of the district of Constantinople, on both sides of the Bosphorus, are by prescriptive right exempt from military service. In the last Russian War the extreme efforts of the Government could not bring, according to the official figures, over 490,000 men into the field, or 4·3 per cent of the population subject to military service. Taking into consideration the facts that the Albanians have lost all feeling of fidelity to the Caliph, and are clamoring for autonomy;

that the Arabs of Mesopotamia and Syria are no more to be depended upon, while Yemen needs Turkish garrisons to keep it in subjection; that the Kurds will not serve the Sultan, having furnished for ample pay scarcely 5,000 troopers in the Russian War, and that the Greek islands and Tripoli require troops from without to maintain the Sultan's authority, it is not likely that the Padishah will ever command an army of anything like the proportions set down on paper. To put 400,000 men in the field is probably the extent of his resources.

(For an account of the Turkish navy, see NAVIES OF EUROPE.)

**FINANCES.**—The finances of the Ottoman Government have been in a state of confusion since the issue of the first foreign loans to meet the expenses of the Crimean War. Before 1873 the budget estimates were drawn up to exhibit a surplus or an even balance, although large deficits occurred annually. Since then the budgets have shown deficits, but are no indication of the actual amounts. No accounts of actual receipts and expenditures are published. The expenditures are supposed to have exceeded the receipts of recent years £10,000,000 or more. In 1878-'79 the deficit, owing to the Russian War, rose to £36,000,000. The revenue of that year was not over £14,000,000. Since the war, and the loss of some of the richest provinces, the revenue is not more than £10,000,000 or £12,000,000. The Turkish foreign debt consisted mostly, before the recent conversion, of 5 and 6 per cent bonds. The large loans of 1865 and 1874 were issued at less than 50 per cent of their face value.

In 1876 the payment of interest was stopped entirely. The internal and floating debt was reported in the budget of 1874-'75 to be not over £13,000,000. According to some estimates, it amounted in 1878 to £75,000,000; but in the debt statement made on the occasion of the recent settlement with the foreign creditors it is declared not to exceed £20,000,000. From 1876 to 1881 the Government raised money for its present needs by the issue of a vast quantity of paper currency. At the end of 1878 there were said to be over £90,000,000 of paper money in circulation. Its value declined until eventually it was refused in commercial transactions altogether.

The Turkish Government, by a note dated October 23, 1880, invited the holders of Turkish bonds to choose delegates to consult with the Government regarding the settlement and future payment of the debt. The compromise effected with the representatives of the bondholders was sanctioned by a decree of the Sultan promulgated December 28, 1881. The total amount of the bonds was £190,997,980; of the unpaid interest up to March, 1882, £61,803,905; total debt, £252,801,885. This sum was reduced to £106,437,234. For the service of the debt certain revenues were placed at the disposition of the bondholders from January 13, 1882, until the debt shall be extinguished,

to wit, the products of the monopolies of tobacco and salt, and of certain taxes and tithes. These will be administered by a special commission called the Council of Administration of the Ottoman Public Debt. Of the proceeds of these revenues four fifths will be applied to the payment of interest, and one fifth to the reduction of the capital. To the payment of the capital will be applied also the quotas of the Ottoman debt to be assumed by Servia, Montenegro, Bulgaria, and Greece. The bankers of Galata, who had prior rights to a portion of these revenues as a guarantee for advances amounting to 8,170,000 Turkish pounds, were indemnified by reserving 590,000 Turkish pounds (£1 Turkish = \$4.30) annually out of the mortgaged revenues for the payment of 5 per cent interest on their debt and its gradual extinction. If the yield of the ceded revenues is more than 5 per cent of the reduced debt, the excess will be turned into the Turkish Treasury.

The tobacco monopoly, which is one of the resources ceded to the bondholders, is to be farmed out in the same manner as the Italian *régie*. The loans comprised in the resettlement are the general consolidated debt, the loans of 1858, 1860, 1862, 1863-'64, 1865, 1869, 1872, and 1873, and the Turkish lottery railroad loan. The loans of 1854, 1871, and 1872, are secured by the largest part of the Egyptian tribute.

The loan of 1855, guaranteed by France and England, consumes the balance of the tribute and an annual sum of £197,602 sterling besides. The service of the domestic debts is provided for in the budget of 1880-'81. The European bondholders do not expect to receive from the ceded revenues over 1½ per cent interest per annum on the reduced capital.

The budget for the year ending March 13, 1881, was as follows, in piasters (1 Turkish piaster = 4·3 cents):

RECEIPTS.	
Tax on land products.....	225,000,000
Military exemption tax.....	46,000,000
Tithes.....	500,000,000
Customs.....	180,000,000
Sheep-tax.....	165,000,000
Tobacco.....	100,000,000
Various duties.....	96,998,000
Government land.....	5,200,000
Forests.....	6,070,000
Salines and mines.....	72,309,000
Posts.....	6,800,000
Telegraphs.....	15,700,000
Receipts of Navy.....	36,505,000
Receipts of Ministry of War.....	23,500,000
Receipts of Artillery Department.....	4,009,000
Sanitary duties.....	5,135,000
Egyptian tribute.....	76,500,000
Eastern Roumelian tribute.....	24,000,000
Other tributes.....	13,372,000
Miscellaneous sources.....	8,981,000

The estimated extraordinary expenditures are 210,951,243 piasters, making the total expenditures 1,914,876,359 piasters, or about \$82,340,000, to 1,615,584,000 piasters or \$69,470,000 of revenue, leaving an estimated deficit of 299,292,359 piasters.

FOREIGN AND DOMESTIC POLITICS.—The Sultan was drawn into a closer friendship with Germany as the only great power which was not ready to devour some portion of his dominions. Upon the formation of the Gambetta Cabinet there were prospects of a military alliance in the event of a war of revenge. When Bismarck saw that there was no reason to apprehend a French war, he endeavored to discourage the hopes of the Sultan of recovering Tunis and re-establishing his authority over the whole of North Africa. As against the designs of Gambetta in Egypt, Germany was prepared to support the position of the Porte; yet, in the development of the Egyptian question, the German advice to the Sultan was to accept the course of England as inevitable—with less effect, however, than was met with in persuading Abdul-Hamid to acquiesce in the encroachments of Austria. Friendship with Austria and England and a suspicious attitude toward France and Russia on the part of Turkey, subserved in different ways the interests of Germany. The eastward advance of Austria promotes the political and commercial expansion of Germany. In the Egyptian question, besides wishing to avert the danger of a European war, the German Chancellor was satisfied to have England seize in advance the "compensation" which Russia would proffer to Great Britain in the final division of the "sick man's" estate, and thus help to hedge the Muscovites out of the Balkan Peninsula. The failure of Germany to support the demands of the Sultan in the Egyptian question caused a diminution in his faith in German amity and reliance on the advice of his new friend.

The Porte sent a circular note to the powers on October 3, 1880, when the combined fleets were preparing for the Dulcigno demonstration, stating what it was ready to do to carry out the unexecuted clauses of the Berlin Treaty. In the same note it offered to arrange a composition with the bondholders. The Sultan's motive in volunteering to provide security to

the foreign creditors was the fear of an International Financial Commission, which would place Turkey in the position of Egypt. He proposed to include in the arrangement the Russian War indemnity and the floating debt. His scheme for getting rid of the bondholders' claims, the floating liabilities, and the war ransom together would not cripple the treasury, since the only actual source of revenue which he offered to cede to the creditors was that of the "six contributions," which was already sequestered and administered by the Galata bankers. The others were patent dues and an increase in the customs duties, revenues which were not in existence, and which could not be raised without the consent of the powers. The delegate of the bondholders, Bourke, refused to include the Russian indemnity, and insisted that all the proposed revenues and something additional must be reserved to secure the compromised foreign debt. The negotiations with the bondholders' delegates were pushed to a conclusion, and the danger of an international commission and European tutelage removed. The question of the Russian War indemnity, which was before an element of danger, now became an indifferent matter. The Russian Government made great efforts to obtain a settlement in the way suggested by the Porte. The first precedent of the transfer of specific revenues and their control to creditors was the arrangement with the Galata bankers in 1879, to which the Sultan was driven in his financial straits. By the extension of like privileges to the bondholders political dangers were averted without financially embarrassing the Government. An arrangement on similar lines with the Russian Government would involve political danger and pecuniary sacrifices at the same time. The Turkish Prime Minister suspected that Russia desired to obtain the financial administration of some province in Asia Minor as a preliminary step toward annexation. After many months of tiresome negotiations, during which the projects which the Sultan agreed to in his palace he rejected through the Porte, and the propositions of the Porte were shelved at the palace, a convention was finally concluded in May, 1882. Instead of the forty millions of war indemnity, the Russian Government agreed to accept an annuity of 350,000 Turkish pounds, secured on the sheep-tax of the Vilayet of Aleppo and the tithes of the Vilayets of Konieh, Adana, and a part of the Vilayet of Sivas. These revenues are to be collected by the Ottoman Bank, under the supervision of an agent of the Russian Government, who is not officially recognized by the Porte. This peculiar Byzantine arrangement will enable the Ottoman Government to evade its engagements, if so disposed.

The Prime Minister, Said Pasha, endeavored to obtain the Sultan's consent to a programme of reform which would rescue the administration from the degeneration resulting from the interference of the corrupt retainers of the pal-

ace, restore the Porte to its functions as the exponent of the internal and foreign policy, and regain the respect of Europe by a consistent external policy and progressive internal improvements, including the Armenian reforms provided for in the Treaty of Berlin. Said's protest against the Sultan's irregular methods, in which he had before pliantly acquiesced, was provoked by the action of the Sultan in the Russian indemnity negotiations in concluding arrangements with the Russian Minister through a palace official without the participation of the Porte in any way. Said was subsequently called into consultation, when he vexed the Sultan by protracting the negotiations.

At the beginning of May, Said Pasha was summarily dismissed from the premiership. The autocratically inclined Abdul-Hamid felt thwarted and restricted by the independence of judgment and decision of character of the First Minister. He easily persuaded himself, when Said's firmness in defending the interests of Turkey brought him into collision with the cabinets of Europe, that his vigorous but supple Minister was lacking in the right qualities, and that he could guide the foreign policy more ably himself. The succeeding First Minister, Abdurrahman Pasha, was known as an efficient and honest provincial governor in Asia, but without experience in European diplomacy. During his brief tenure of office, the intercourse was entirely between the embassies and the palace, through the roundabout channels to which Said Pasha had skillfully accommodated himself without allowing his functions to be superseded. After a few weeks, Abdurrahman asked to be relieved. The statesman to whom the Sultan now turned insisted upon the cessation of palace interference. He was finally constrained to recall Said Pasha, who was reappointed Vizier in the second week of July. The Egyptian crisis occurred during Abdurrahman's brief ministry. The Minister advised the Sultan to co-operate with Europe, and seek to have the intervention in Egypt intrusted to Turkey. Abdul-Hamid, set in his Islamic policy, and listening only to the palace party, lost every opportunity of taking part in the settlement of the Egyptian difficulties, and only tried to repair his blunders when it was too late. (See EGYPT, for account of the Constantinople Conference, and Turkey's action in the Egyptian affair.)

The Armenian question was pressed upon the consideration of the Porte before the Egyptian crisis, but was then allowed to drop. Russia assumes the rôle in Armenia which she played in Bulgaria; but the Sultan is not afraid of the Armenians accepting the Russian championship when the choice lies between Turkish rule and Russian. One of the antiquarian national movements has been set on foot in Armenia, looking to the re-establishment of the ancient Armenian monarchy; but it is even more artificial than the similar movements

which took place in European Turkey. Russia has massed in Russian Armenia an army which is said to number seventy thousand troops, exclusive of the necessary garrisons. This suspicious movement was met by strengthening the Turkish force in that region, and extending the fortifications at Erzerum, so as to make it a fortress of the first class.

The hopes of the Sultan of soon reorganizing his empire on the basis of Islamic ideas seemed to decline as the year advanced. In May a circular to the powers demanded that the consular courts should be abolished, and the rights of foreigners in civil and criminal cases confided to the jurisdiction of the national tribunals—a demand which was subsequently not pressed. The Sultan called to his aid German experts to help arrange the ways and means and the technical details of reforms in the military organization, finances, and civil administration of the empire, which would develop the Mohammedan character of the Ottoman state, and at the same time satisfy Europe and preclude future interference. Three important commissions were appointed to investigate questions of administrative reform, which entered upon their labors in the autumn. The first, consisting of the Finance Minister, Munir Pasha, and the two Germans, Wettendorf Pasha and Bertram Effendi, was to elaborate a scheme for the organization of a new system of finance. Another of the commissions, composed of the Sheik-ul-Islam and the Minister of Justice, Djeydet Pasha, occupies itself with legal reforms, including a scheme of abolishing the extra-territorial jurisdiction of the powers in criminal cases. One of the results of the Islamic policy pursued by Abdul-Hamid has been the withdrawal of European capital from the country, the outflow of specie, a decline in the value of real estate, and a period of commercial stagnation, enforced idleness, and popular misery. European speculators continued to clamor for railroad concessions, for the delivery of the undeveloped mines of the country into their hands, and for other privileges; but the Sultan refuses to grant any commercial concessions or opportunities, particularly in Anatolia.

At the end of November a conspiracy to kill or depose Abdul-Hamid was reported to him. In the panic which ensued, the ministry was dismissed, and for several days every one was held in suspicion. Achmet Vefyk, a former Grand Vizier, whom Said Pasha had a few weeks before dismissed from the governorship of Broussa for disobedience, was appointed to succeed him as First Minister. Two days afterward Said was again recalled and the former ministers reappointed, including Mahmud Nedim, the Minister of the Interior, Said's determined enemy, through whose intrigues, in a great measure, his dismissal had both times been brought about.

The Mohammedan religious ferment of the last few years, which Abdul-Hamid has en-

couraged in order to divert to his own support as the spiritual head of Islam and strengthen his waning power, turned out to be a source of weakness instead. Owing to his inability to prevent the French from annexing Tunis or the English from conquering Egypt, the Arab races in Asia and Africa manifested a disposition to reject the authority of the Ottoman Caliph. A dangerous agitation broke out in Arabia during the Egyptian War. The Grand Shereef of Mecca, Abdul-Moutahib, encouraged by Arabi Pasha, conceived the idea of heading a rebellion against the Sultan and proclaiming himself Caliph. Great excitement prevailed among the Hedjaz and Bedouin tribes; but before there was any open insurrection the aged Shereef was deposed by order of the Sultan and placed in confinement. Abdullah Doun Pasha was commissioned to officiate pending the appointment of a new Shereef. His brother, Aoun Refik, was selected by the Caliph in September. When he arrived, his brother tried to make use of the popular disaffection to maintain himself in the position. Aoun Refik is a younger brother of Shereef Hussein, who was assassinated in 1879 at Jeddah. The new Grand Shereef is esteemed a refined and enlightened man, entirely free from bigotry.

While the Arabs of Yemen and the Hedjaz manifested a spirit of rebellion which has not been seen since the opening of the Suez Canal enabled the Turkish Government to send ironclads to the Red Sea, the Tripolitans exhibited similar signs of discontent and sedition. The African Mussulmans, more fanatical than their fellow-believers in Arabia, are attracted to the pretended Mahdi, Muhamed-es-Senoussi, who from the heart of the Libyan Desert exerts a secret and formidable power throughout North Africa, and causes much anxiety to the French in Tunis and Algiers. The fact that on November 12, 1882, commences the year of prophecy in which a Moslem Messiah is to appear, is one cause of the unusual excitement throughout the Ottoman Empire. Arabi Pasha was deemed by some to be the destined deliverer. The chief Senoussi, who pretends to exhibit all the signs of the prophecy, being in the fortieth year of his age, the son of a Muhamed and a Fatima, with arms of extraordinary length, etc., is abler than the rival Mahdi who defies the military power of the Egyptian Government in the Soodan (see *EGYPT*).

The Kurdish Sheik Obaidullah, whose forays in Northwest Persia, in 1880, threatened to provoke hostilities between the Sultan and the Shah, and who on one of his marauding expeditions threatened the important city of Tabreez, came to Constantinople and surrendered himself upon the summons of the Sultan in the latter part of 1881. His followers ceased their depredations while their chieftain was kept as a hostage at Constantinople. At the end of the summer of 1882 he was allowed to escape, and went back to the abode of his tribe in the region of Lake Van. He afterward consented

to live in retirement at Mosul; but while being conducted thither he was rescued from his escort by the Kurds, headed by his son, and

carried off to a stronghold in the mountains, called Huronina. A Turkish force was sent to recapture him in October.

## U

**UNITARIANS.** The annual meeting of the *American Unitarian Association* was held in Boston, Mass., May 30th. The Hon. Charles Allen presided. The receipts of the treasury for the year had been \$35,000. The number of societies contributing to the funds of the Association had increased from 148, in the preceding year, to 193, and was now larger than at any time during the fifty-seven years of the history of the body. The work of the society had included the continued assistance of feeble societies in New England; the maintenance and enlargement of efforts in college towns; enlargement of the number of missionaries in new States and Territories; free distribution of tracts and books; aid to societies in New Orleans, La., Evansville, Ind., and Philadelphia, Pa.; and the establishment of a mission to the Scandinavians in the Northwest. The Association resolved to ask the churches for \$50,000 for the coming year.

The *Women's Auxiliary Conference* had received during the year \$2,866, and had supported a missionary in Dakota, and aided some poor societies. A considerable amount of work of a similar character had been performed by branch associations.

The *National Conference of Unitarian and other Christian Churches in the United States* met at Saratoga Springs, N. Y., September 29th. Governor Long, of Massachusetts, presided. About 600 delegates were present, and the total attendance upon the meetings was 2,200. The report of the General Council gave a summary of the work which had been accomplished by the Conference since 1866, and added in respect to the work of its own term of two years (the two years since the last meeting of the Conference), that \$18,000 had been raised to build a church at Ann Arbor, Mich.; the effort to raise \$50,000 for the Theological Seminary at Meadville, Pa., had failed; and only about two thirds of the \$50,000 which the previous Conference had decided were needed yearly for missionary work had been raised. A large increase had, however, taken place in the contributions during the year. The Rev. A. D. Mayo had spent two years in the South, under the auspices of the Conference, in the interests of public education. The Western Conference reported on the building of churches, and the advance of its efforts in Colorado and New Mexico. Its financial affairs were prosperous, and its societies were enjoying a healthy increase. The Middle and Southern Conference had no missionaries at work, but most of its societies were in good condition. The New England churches had furnished during the past two

years more than \$800,000 for church and benevolent work. A report was presented from the American Unitarian Association, and the subject of a union between that body and the National Conference was considered. An amendment to the constitution of the Conference was adopted, explaining that "while we believe that the preamble and articles of our constitution fairly represent the opinions of a majority of the churches, yet we wish distinctly to put on record our declaration that they are no authoritative test of Unitarianism, and are not intended to exclude from our fellowship any who, while differing from us in belief, are in general sympathy with our practical purposes and aims." A resolution in favor of total abstinence was adopted. The Conference was informed that Mr. Wade had pledged himself that when the committee of the Conference on the endowment of the institution to be called after him, the Wade Theological School, at Cleveland, Ohio, had secured \$150,000 toward that object, he would add \$350,000; and that if the committee would raise \$50,000 more, he would add a like sum, so as to make the whole endowment \$600,000. The Conference resolved that an endeavor should be made to raise \$50,000 annually, during the next two years, for the American Unitarian Association.

After the adjournment of the Conference, an address was issued by its Council, setting forth the work of the body, and the character of the enterprises for which it asked contributions. The address stated that of the \$800,000 raised for church-work by the New England churches, more than \$250,000 were spent on enterprises outside of the churches themselves; invited co-operation in the endowment of the Wade Theological Seminary; mentioned that \$30,000 had been raised toward the amount of \$50,000 sought for the endowment fund of the Meadville Theological School; commended an enterprise for raising \$10,000 for a church in the university town of Madison, Wis.; apportioned among the several conferences the amount they were expected to contribute toward providing \$50,000 for the work of the American Unitarian Association; and asked for \$1,500 in support of Mr. Mayo's educational mission in the South.

The *National Unitarian Conference* in England was held in Liverpool, in May. Mr. James Heywood, F. R. S., presided. Free exchanges of views were made in the essays which were read on various topics of interest to the Unitarian churches.

The fifty-seventh anniversary of the *British and Foreign Unitarian Association* was

held in London during the first week in June. Mr. David Ainsworth, M. P., presided. Questions were discussed respecting the means of attracting the people to public worship, and concerning the interests of Sunday-schools, and moral and religious education.

**UNITED BRETHREN CHURCH.** The "United Brethren Year-Book" for 1883 gives statistics of this Church, of which the following is a summary: Number of conferences (including one in Sherbro, Africa), 51; number of churches, 4,463; of members, 159,547; of itinerant preachers, 1,257; of local preachers, 963; number of meeting-houses, 2,322, the probable value of which is \$2,974,313; number of parsonages, 389, the probable value of which is \$282,284; number of Sunday-schools, 3,180, with 25,690 officers and teachers and 165,743 scholars. Amount of contributions: For salaries of ministers, \$387,710; for ministerial aid, \$3,136; for missions, \$45,293; for woman's missions, \$4,948; for church-erection, \$1,742; for support of bishops, \$6,661; for colleges and seminary, \$36,450; for ministerial education, \$1,477. Total amount of contributions for all purposes, including church expenses, \$811,209. Number of bishops, five.

One general religious paper, six Sunday-school and missionary journals, and a woman's missionary paper, in the English language, and one general religious paper and one Sunday-school journal in the German language, are issued from the publishing house in Dayton, Ohio.

The educational institutions comprise twelve colleges and seminaries and the Union Biblical Seminary at Dayton, Ohio.

The twenty-ninth annual session of the *Home, Frontier, and Foreign Missionary Society* of the United Brethren in Christ was held in Lebanon, Pa., beginning May 26th. The receipts of the treasury of the society had been \$49,674, while its net liabilities amounted to \$26,154. The amount of the permanent fund was reported to be \$52,998. The receipts and expenditures for church extension had been \$2,327 each. The society had in its home department 214 missionaries in 31 self-sustaining conferences, with 15,532 members, 3,563 of whom had been added during the year. The amount expended by branch treasuries in the department of work had been \$21,165.

In the foreign department, nine missionaries were employed in Germany, and reported considerable success. The Sherbro Mission, in West Africa, reported six American missionaries, ten native assistants, a number of itinerating students and mechanics, and five stations occupied and two about to be opened at Shengay, with two stations at Bempeh; while the work of the mission was or would be extended to about one hundred towns.

The *Woman's Missionary Association* had received \$5,909. It was interested in work in the African and German missions, and was contemplating the opening of a Chinese work on the Pacific coast of the United States.

**UNITED STATES.** The year was characterized by few events of national importance in the United States. The change of administration which occurred in the fall of 1881 showed its effects in the most gradual manner, the President being cautious in making official changes, as well as in all matters pertaining to public policy. At the beginning of the year three members of the Garfield Cabinet remained, viz.: Robert T. Lincoln, of Illinois, Secretary of War; William H. Hunt, of Louisiana, Secretary of the Navy; and Samuel J. Kirkwood, of Iowa, Secretary of the Interior. In April Mr. Hunt and Mr. Kirkwood retired, the former receiving the appointment of Minister to Russia. William E. Chandler, of New Hampshire, was appointed Secretary of the Navy, and H. M. Teller, of Colorado, Secretary of the Interior. The appointment of Mr. Chandler excited some opposition in the Senate, on political grounds, but he was confirmed on the 12th of April, by a vote of 28 to 16, several Democratic Senators not voting. Mr. Teller's appointment was not opposed. In March an appointment of Associate Justice on the bench of the Supreme Court was made, in consequence of the retirement of Mr. Justice Hunt, for whom special provision had been made, by Congress continuing his salary, although he had not served ten years. The first name sent in for the vacant judgeship was that of Roscoe Conkling, of New York, which was received on the

FREDERICK T. FRELINGHUYSEN, SECRETARY OF STATE.

[Born in Milltown, New Jersey, August 4, 1817; graduated at Rutgers College in 1836; admitted to the bar in 1839; Attorney-General of New Jersey in 1861 and 1866; United States Senator from December 3, 1866, to March 3, 1869, and from March 4, 1871, to March 3, 1877. His appointment to the highest position in President Arthur's Cabinet was confirmed by the Senate December 12, 1881.]

24th of February. For some days it was left uncertain whether Mr. Conkling would accept the place, but on the 3d of March, after the

appointment had been confirmed, he wrote a letter to the President declining. In this he said: "It will ever be a matter of pride and satisfaction that you and the Senate deemed me fit for so grave and exalted a trust. But, for reasons which you would not fail to appreciate, I am constrained to decline." The place was then offered to Senator George F. Edmunds, of Vermont, who also declined. The appointment was then tendered to Judge Samuel Blatchford, of the Circuit Court, and by him accepted. He was promptly and unanimously confirmed, and the Supreme Bench, for the first time in several years, was fully occupied. The name of Aaron A. Sargent, of California, was submitted to the Senate in the latter part of February, for the position of Minister to Germany, and the appointment was confirmed in March. An appointment which attracted some attention and produced considerable opposition was that of Roland Worthington to be Collector of the Port of Boston. He was identified with what was known as the "Stalwart" wing of the Republican party, and was opposed by both the Senators and several of the Representatives from Massachusetts. The appointment was sent in early in April, and, after considerable opposition in the Senate, was confirmed on the 15th of May, by a vote 38 to 14. Near the beginning of August General U. S. Grant and Mr. William H. Trescott were appointed commissioners to negotiate a commercial treaty with Mexico. Among the other important appointments of the year were those of Alphonso Taft, of Ohio, to be Minister to Austria; John Russell Young, of New York, Minister to China; William W. Astor, of New York, Minister to Italy; James R. Partridge, of Indiana, Minister to Peru; Nicholas Fish, of New York, Minister to Belgium; William L. Dayton, of New Jersey, Minister to the Netherlands; Eugene Schuyler, of New York, Minister-Resident and Consul-General in Greece, Servia, and Roumania; John M. Francis, of New York, Minister to Portugal; M. J. Cramer, of Kentucky, Minister to Switzerland; C. C. Andrews, of Minnesota, Consul-General at Rio Janeiro; and Adam Badeau, of New York, Consul-General at Havana.

The first session of the Forty-seventh Congress continued until the 8th of August. The main features of legislation were contained in the bill granting a pension of \$5,000 a year to the widow of President Garfield, approved February 16th; the Anti-Polygamy Bill, March 22d; the Apportionment Bill, increasing the number of Congressional Representatives to 325; the Anti-Chinese bill, restricting Chinese immigration for twenty years, vetoed April 4th, and the modified bill limiting the restriction to ten years, approved May 6th; the Tariff Commission Bill, approved May 15th; the bill extending the charters of national banks, approved July 12th; and that providing for distribution of the remainder of the Geneva award, approved June 5th. The appropria-

tions exceeded \$251,000,000. The bill appropriating nearly \$19,000,000 for the improvement of rivers and harbors was vetoed on the 1st of August, and passed, notwithstanding the President's objections, on the following day. (For particulars of congressional action, see CONGRESS; for action under the Tariff Commission Bill, see TARIFF REVISION.)

The political movements of the year were confined to the several States, but received a national significance from the fact that members of Congress were to be chosen, and in a number of States Legislatures were to be elected which would have occasion to choose United States Senators. In the more prominent Northern States causes of dissatisfaction appeared to be at work which especially affected the Republican party. The change of the national Administration in the fall of 1881 had produced an attitude of sensitiveness and suspicion on the part of the wing of that party which had sympathized with General Garfield

CHARLES J. FOLGER, SECRETARY OF THE TREASURY.

[Born in Nantucket, Massachusetts, April 16, 1818; graduated at Hobart College, Geneva, New York, in 1836; admitted to the bar in 1839; elected Judge of Ontario County Court in 1851; elected State Senator in 1861, '63, '65, '67, and '69; appointed by President Grant Assistant United States Treasurer in New York, in 1869; elected Associate Judge of the Court of Appeals in 1870, and Chief Judge in 1880; was appointed a member of President Arthur's Cabinet October 27, 1881.]

in his contest with certain leaders with whom the new President was supposed to be closely allied. Some of the appointments occasioned criticism, and there was apparent a lack of cordiality between the Administration and a certain portion of the Republican party. Moreover, the course of Congress in failing to meet and directly deal with the questions of reform in the civil service and revision of the tariff, together with its persistency in appropriations deemed extravagant, aggravated the feeling of

dissatisfaction. Added to these were a variety of local causes of disaffection. In Pennsylvania the Republicans were divided by an Independent revolt, the cause of which was to be found in the methods of party management under the lead of Senator Cameron. The result was the defeat of the Republican candidates for State offices in November—Pattison, the Democratic candidate for Governor, receiving 355,791 to 315,589 for Beaver, Republican, and 43,743 for Stewart, Independent. (See PENNSYLVANIA.) In New York, while there was no Independent movement, the revolt in the Republican ranks proved to be much greater than in Pennsylvania, and resulted in the

ROBERT T. LINCOLN, SECRETARY OF WAR.

[Born in Springfield, Illinois, August 1, 1843; graduated at Phillips Academy, Exeter, New Hampshire, in 1860, and at Harvard College in 1864; was commissioned Captain and Assistant Adjutant-General of Volunteers, February 11, 1865, and served on General Grant's staff till June 10, 1865; admitted to the bar in 1867. Appointed a member of President Garfield's Cabinet, March 5, 1881, he retains the same position under the present Administration.]

unprecedented majority of more than 190,000 for the Democratic candidate for Governor, who was elected to succeed a Republican. (See NEW YORK.) Still earlier, in October, the Democrats had won a notable victory in Ohio, where, in addition to more general causes of dissatisfaction, the Republicans were divided on the question of regulating the liquor-traffic. (See OHIO.)

Elections were held during the year as follow: Alabama elected State officers and Legislature August 7th, and Congressmen November 7th. Arkansas elected State officers and Legislature September 4th, and Congressmen November 7th. California, Colorado, Connecticut, and Delaware elected Governor, Legislature, and Congressmen November 7th. Florida elected only Legislature and Congressmen, on the same date. Georgia elected State officers and Legislature October 4th, and Congressmen November 7th. Illinois elected Treasurer, Su-

perintendent of Instruction, Legislature, and Congressmen November 7th. Indiana elected minor State officers, Supreme Judges, Legislature, and Congressmen November 7th. Iowa adopted a prohibitory amendment of her Constitution June 27th, and elected minor State officers and Congressmen November 7th. Kansas elected State officers, Legislature, and Congressmen November 7th. Kentucky elected Democratic Clerk of the State Court of Appeals August 7th, and Congressmen November 7th. Louisiana elected Congressmen only, November 7th. Maine elected Republican Governor, Legislature, and Congressmen September 11th. Maryland elected State Judges and Congressmen November 7th. Massachusetts and Michigan elected State officers, Legislature, and Congressmen November 7th. Minnesota elected Legislature and Congressmen November 7th. Mississippi elected Congressmen only. Missouri elected minor State officers, Legislature, and Congressmen, and voted upon an amendment concerning the State judiciary, November 7th. Nebraska elected State officers, Legislature, and Congressmen, and voted upon a woman's suffrage amendment, November 7th. Nevada elected State officers, Legislature, and Congressman November 7th. New Hampshire elected Governor, Railroad Commissioners, Legislature, and Congressmen November 7th. New Jersey elected Legislature and Congressmen November 7th. New York elected Governor, Lieutenant-Governor, Chief Judge of the Court of Appeals, Assembly, and Congressmen, and voted upon amendments making the canals free, and providing for the election of additional Supreme Justices, November 7th. North Carolina elected Associate Judge of the State Supreme Court, six Superior Court Judges, Legislature, and Congressmen November 7th. Ohio elected minor State officers and Congressmen October 10th. Oregon elected State officers, Legislature, and Congressman June 5th. Pennsylvania elected State officers, Legislature, and Congressmen November 7th. Rhode Island elected State officers and Legislature April 5th, and Congressmen November 7th. South Carolina elected State officers, Legislature, and Congressmen November 7th. Tennessee rejected a proposition to hold a Constitutional Convention August 3d, and elected Governor, Legislature, and Congressmen November 7th. Texas elected State officers, Legislature, and Congressmen November 7th; and Vermont the same on September 5th. Virginia elected Congressmen only, November 7th. West Virginia elected Judges of the Supreme Court of Appeals to fill a vacancy, Legislature, and Congressmen October 10th. Wisconsin elected Legislature and Congressmen November 7th, and voted upon amendments relating to residence and registration of voters and the election of county officers, and providing that general elections of State and county officers, except judicial, shall be held biennially in the even years after 1884, those who were chosen in 1881 to hold over

until 1885 if the amendment was adopted. (For particulars of the State canvasses and the result of elections, see the several States.)

The general result of the elections for Congressmen was to give the Democrats a large majority in the House of Representatives of the Forty-eighth Congress. The result of the senatorial elections of the winter following gave the Republicans just one half of the members of the Senate, reckoning the Virginia Readjusters with the Opposition. The subject of political assessments figured among the influences which affected the course of events. (See POLITICAL ASSESSMENTS.) Among other incidents of public affairs was the organization of the Utah Commission and the trial of the Star-Route case. (See STAR-ROUTE TRIAL.)

WILLIAM E. CHANDLER, SECRETARY OF THE NAVY.

[Born in Concord, New Hampshire, December 28, 1835; graduated from Harvard Law School in 1855; served three terms in the New Hampshire Legislature, as Speaker in 1868 and 1874; appointed by President Lincoln Judge-Advocate-General of the Navy Department, March 9, 1865; held the office of First Assistant Secretary of the Treasury, with Hugh McCulloch, for two years. Selected by President Arthur as a member of his Cabinet, his appointment was confirmed by the Senate April 12, 1882.]

The case of Guiteau, the assassin, was carried to the full bench of the Supreme Court of the District of Columbia on questions raised by the defense. The decision was rendered on the 22d of May. Regarding the question of jurisdiction, it was held that the crime consisted in the blow which caused death, and where that blow was struck the crime was committed. On that ground the jurisdiction of the criminal court was sustained. The other exceptions were overruled, the motion for a new trial was denied, and the judgment of the court below was confirmed. Application was made for a re-argument before the court, on the ground that there were new considerations to be urged, but to this application the Court replied on the 5th of June: "In the case of Gui-

teau, the judges who listened to the argument in that case have come to the conclusion that they have exhausted their powers upon it. They have heard it patiently, fully, and fairly, and re-argument would bring them to no other conclusion than that which they have already arrived at; and they decline to reopen the case for argument." Application was subsequently made to Mr. Justice Bradley, of the Supreme Court of the United States, for a writ of *habeas corpus*. This was denied on the 19th of June. The counsel for the doomed man next resorted to the President, in the hope of obtaining a reprieve, and the appointment of a lunacy commission to determine the question of the prisoner's insanity. This effort was backed by a number of philanthropists and scientific experts, but it failed. The question was referred to the Attorney-General, who advised against the reprieve, and expressed doubt of the President's power to appoint such a commission as was asked for. In concluding his opinion, the Attorney-General said:

At the last hour, you are asked to reprieve this justly condemned man, to investigate, in an unusual, if not irregular, way, a fact that has been solemnly determined by the constituted authorities of the law. I submit it ought not to be done. It will establish a dangerous precedent. It will shake public confidence in the certainty and justice of the courts, by substituting your will for the judgment of the law, and its forums, at the instigation of a few who assert he was and is insane, and who press their applications, contrary to the preponderance of medical talent of this country, who believe the other way, and think him sane, as is admitted by one of the most conspicuous, earnest, and important of the petitioners.

Guiteau was executed on the 30th of June at the jail in Washington. An autopsy was made under the direction of Dr. D. S. Lamb, of the Medical Museum, in the presence of a number of physicians, and the result was reported in an official manner. Of this it was said that some deviations were shown from the typical brain, but "they have absolutely no significance from the point of view of mental derangement." The skeleton was added to the curiosities of the Medical Museum.

The question of compensation to President Garfield's medical attendants was made a matter of controversy in Congress, and was finally referred to a Board of Audit which made the following allowances: Dr. Bliss \$6,500, Drs. Agnew and Hamilton \$5,000 each, Reyburn and Boynton \$4,000 each, and Mrs. Edson \$3,000. The board also allowed different parties \$5,929 for services and supplies, including the receiver of the Central Railroad of New Jersey, \$1,500; C. Jones, Elberon, \$1,162. The allowance for outside claims was about \$11,000 less than the amount available, making the total balance nearly \$19,000 out of the entire appropriation of \$57,000. There were allowances amounting to \$5,440 for extra services by Government employes, the highest sum being \$300 to William Crump. The other allowances vary from \$15 to \$200. The allowances for physicians aggregated \$8,000 less

than the amount specially appropriated for medical attendance.

Captain H. W. Howgate, of the Signal-Service Bureau at Washington, was arrested, near the beginning of the year, on a charge of embezzling funds of the United States in his keeping as disbursing officer of the Bureau. After being in jail for two months in consequence of his inability to procure bail, he was allowed to visit his family in charge of a bailiff by special leave of Judge Wylie. While at his house he managed to elude the bailiff and made his escape. This occurred on the 13th of April, and all effort to rearrest the accused officer, or to discover his whereabouts, was unavailing during the year.

The foreign relations of the Government of the United States have been entirely undisturbed. The special mission of Mr. William

TIMOTHY O. HOWE, POSTMASTER-GENERAL.

[Born in Livermore, Maine, February 24, 1816; admitted to the bar in 1839; member of the Legislature of Maine in 1842; Judge of the Fourth Judicial Circuit of Wisconsin from 1850 to 1855; was elected three times to the United States Senate, and served from 1861 to 1879; was appointed by President Garfield a commissioner to the International Monetary Conference at Paris in 1881. His nomination as a member of his Cabinet by President Arthur was confirmed by the Senate January 5, 1882.]

H. Trescott to Peru, mentioned in the "Annual Cyclopædia" for 1881 (see PERU, CHILI, AND THE UNITED STATES in that volume), led to no practical result. Early in February Mr. Trescott was instructed by the Secretary of State that the United States only proposed to give counsel and aid to Chili in any negotiations which that country might desire to make; that Chili must herself determine whether or not she would accept such aid, but that in no event would the United States take part in negotiations based upon the surrender of Tarapacá and a further indemnity of \$20,000,000, as such a demand was considered exorbitant. Shortly after, on the 22d of February,

Mr. Frelinghuysen instructed Mr. Trescott that the United States would assent to a liberal war indemnity, but that consent was not to be given to the cession of Tarapacá without first communicating with the department; that should Chili persist in her demand for such cession, the creditors of Peru might possibly maintain that the revenue of Tarapacá had been already hypothecated, and that the President desired to urge moderation on the part of Chili.

Under date of February 24th Mr. Trescott sent a dispatch in which he said:

You may assure the President that I have urged upon the Government of Chili the wisdom of moderation in the terms which it demanded. But Chili is determined to have Arica and Tacna, as well as the territory south of the Quebrada de Camarones [Tarapacá]. The indemnity of twenty millions, with this region of country as a pledge, was only an indirect mode of securing the country itself. Peru has not, that I can see, any capacity of resistance in herself, and Chili will not yield to any merely friendly persuasion. The communication to the Government of Chili of the resolution of the Government of the United States, that it will not take part in any negotiation based upon the considerations proposed, and the reply of the Government of Chili, that it is not prepared to modify these conditions, practically close the mission.

On the 4th of March Mr. Trescott telegraphed that the publication of his instructions and confidential communications had rendered a modification of the terms offered by Chili impossible, and he thought his presence in Washington with information would be more useful than remaining at Santiago, where he then was. On the same date he communicated details of his conferences with Balmaceda, the Chilean Minister of State, and the protocol to which they had agreed on the 11th of February. The protocol which was agreed to by Messrs. Trescott and Balmaceda in their conferences at Santiago contained the following:

Chili declares that, as a work of mutual friendship and confidence, she would accept, if they should be offered, the good offices of the United States, in the contest with Peru, provided that the United States, in the exercise of its good offices, accepts the conditions of peace which Chili would be disposed to concede to the enemy, and with the understanding that, if the United States should not obtain the consent of Peru to the conditions of peace, which serve as the basis of its good offices, in that case the action of the United States between the belligerents should terminate.

The terms on which, according to the protocol, Chili would make peace, are as follow:

1. Cession to Chili of all the territory of Peru situated to the south of the Quebrada de Camarones.
2. Occupation of the region of Tacna and Arica for ten years, Peru being obliged to pay 20,000,000 pesos at the expiration of that time. If, at the expiration of that time, Peru should not pay to Chili the 20,000,000 pesos, the region of Tacna and Arica should remain *pro facto* ceded to and incorporated in the territories of the Republic of Chili. If Arica returns to the power of Peru, it shall remain forever unfortified.
3. Chili shall occupy the Islands of Lobos so long as there shall be guano upon them, and both the net product of the guano taken from them and that from the mines discovered and being worked in Tarapacá shall be equally divided between Chili and the creditors of Peru.

On his return to Washington Mr. Trescott

made a final report of the result of his mission, dated June 5th, in which he said :

It only remains for me to state what consideration has so far been given to the proposed conditions. For reasons stated in former dispatches I was obliged to leave Lima before my communication in its formal shape could reach the Chilean Government at Santiago. But that Government has in Lima a diplomatic representative in the person of Señor Novoa, who is authorized to consider any propositions tending to a negotiation for peace. The whole subject was fully discussed with him and General Lynch, the military commander of the Chilean army of occupation, and the propositions, together with the substance of the conference, were telegraphed by Señor Novoa to his Government. I do not regard the telegraphic reply which was communicated by Señor Novoa as conclusive. My dispatch had not yet reached the Chilean Government, and I think it clear that the bare statement of the propositions had not put the Chilean Government in full possession of the considerations which recommended their adoption. I have other reasons for believing that the question is still an open one. The reply of the Government of Chili as communicated by Señor Novoa intimated : 1. That as no active military operations were being conducted by the Chilean army, there was no apparent necessity for a truce. But it is obvious that, as Arequipa is open at any moment to occupation by the Chilean troops from Mollendo, the Peruvian Congress would naturally and properly require some guarantee that its deliberations should be free and uninterrupted. A repetition of the dissolution of Congress because its deliberations were not agreeable to the Chilean Government is a contingency which the Congress, in view of the past, could scarcely disregard, and which would make any effort at negotiation only another unfortunate failure. Besides which, if there are to be no active military operations, there can be no possible danger or inconvenience to Chili in giving such a condition of things the sanction of a formal agreement by a short truce. 2. While the Chilean Government desired peace, it was unwilling to enter upon negotiation without distinct agreement in advance of the terms which must be accepted. It was dissatisfied with the experience of its former attempts at negotiation with the Calderon Government, and was indisposed to renew the effort without the certainty of a successful result. It was willing, therefore, to negotiate informally with General Montero, and, upon the signature of satisfactory preliminaries, would recognize the existence of the Peruvian Government *pari passu* with the execution of the treaty. But the Congress which had authorized General Montero to negotiate had expressly forbidden any cession of territory, and it was therefore simply impossible for General Montero to sign a treaty containing such provisions. After some discussion Señor Novoa expressed his willingness to accept a preliminary agreement by which General Montero would bind himself to submit for approval to the national Congress such a treaty as he and Señor Novoa could agree upon, and to recognize General Montero's Government upon the execution of such an instrument. This would have afforded an opportunity for the opening of negotiations, but Señor Novoa added the limitation that, if Congress did not approve the treaty so submitted, the recognition would be withdrawn. This was simply an impossible condition. The recognition of the Montero Government had to be positive. If Congress failed to approve, Chili could still prosecute the war until Peru was compelled to accept her terms, but such a contingent recognition was, in fact, only the old proposition of a treaty before recognition in another and much more illogical and embarrassing shape. Señor Novoa was willing to adopt another method. He would sign a treaty with General Montero, to be submitted and approved by the municipalities—that is, by the local authorities of the separate provinces. Such a method was entirely beyond General Montero's

constitutional powers, and would, I think, have led to the renewal of the difficulties between the various parties in Peru, who, accepting General Montero as the legitimate representative of the Government, would acquiesce in the regular action of the Executive and Congress. As Señor Novoa was either indisposed or unauthorized to move out of this vicious circle, our conferences terminated. I regret this the more, as I think the propositions offered a fair prospect of a serious negotiation. Chili can not obtain a peace which will give sanction and title to her acquisition of territory without the recognition of a legitimate government in Peru. Without a treaty with such authority the acquisition will be simply one of force, to be maintained as it has been acquired. The recognition of General Montero's Government will place upon him and upon the people of Peru the responsibility of making or rejecting peace, while the calling of

HENRY M. TELLER, SECRETARY OF THE INTERIOR.

[Born in Alleghany County, New York, May 23, 1830; was admitted to the bar in 1858; on the admission of Colorado into the Union in 1876, was elected a United States Senator from that State for the short term ending March 3, 1877; was re-elected for the full term ending March 3, 1883. On April 6, 1882, his appointment to a position in President Arthur's Cabinet was confirmed by the Senate, and he resigned his seat in that body.]

Congress will afford the opportunity to those who desire peace to do what they can not do under present circumstances—organize a party which can exert its influence directly, effectually, and legitimately in the Congress itself.

But I can not with justice conclude this dispatch without saying that I believe the reason which induces the hesitation of Chili is that she believes that, so long as the Peruvians are convinced that the United States will finally intervene, they never will negotiate in earnest. It is unquestionably true that the Peruvian Government does believe that the United States will intervene; at any rate, it considers that the question of intervention—as one of its leading officials expressed it to me—was still a pending question. It is obvious that neither Chili nor Peru will approach the solution of their difficulties in the proper spirit, or in any hope of a result satisfactory to both, as long as this impression lasts. If the United States intend to intervene effectively to prevent the disintegration of Peru, the time has come when that intention should be avowed. If it does not, still more urgent is the necessity that Chili and Peru should understand exactly where the action of the United States ends. It would be entirely beyond my duty to discuss the character or the consequences of either line of

conduct, but I trust that you will not deem that I am going beyond that duty in impressing upon the Government that the present position of the United States is an embarrassment to all belligerents, and that it should be terminated as promptly as possible. There is another conviction which it is clearly my duty to express. I believe that, whenever the United States formally withdraws from further intervention, Peru will apply to the European powers, and that a joint intervention of two or more is probable.

BENJAMIN H. BREWSTER, ATTORNEY-GENERAL.

[Born in New Jersey, October 16, 1816; graduated at Princeton College in 1834; admitted to the bar in 1837; Attorney-General of Pennsylvania from 1867 to 1869. His appointment as a member of President Arthur's Cabinet was confirmed by the Senate December 19, 1881.]

Subsequently Mr. James R. Partridge was sent as Minister to Peru, but apparently under instructions which left him little or no discretion for dealing with the complications existing between that country and its conqueror. The only official information made public on the subject is contained in the following response of the Secretary of State to an inquiry from the Senate:

DEPARTMENT OF STATE,  
WASHINGTON, February 27, 1883.

The Secretary of State, to whom was referred the following resolution of the Senate—

*Resolved*, That the President be respectfully requested, if not in his judgment incompatible with the public interest, to communicate to the Senate any information in his possession touching an alleged joint agreement between the Ministers of the United States, of Great Britain, of France, and Italy, now serving at Lima or Peru, to make a joint effort to bring about peace between Chili and Peru, and to inform the Senate whether the Minister of the United States has been instructed to invite or accept the mediation of European powers in the settlement of a purely American question—has the honor to report that he received a dispatch from Mr. Partridge, who stated that, for reasons therein given, the representatives of Great Britain, France, Italy, and the United States (Germany declining to take any part) were led to consider, at an informal meeting at Mr. Partridge's house, by what mode a solution of the existing difficulties might be reached. Mr. Partridge and his colleagues accordingly agreed on a memorandum which was to be sent by each of the Ministers to his own Government, as setting forth their views and hopes. The Ministers state in substance that they are unanimously of the opinion that each should declare to his Government that they believe the only possible means of bringing about a ces-

sation of hostilities, of saving Peru from complete destruction, and of arresting the ruin of neutrals, would be an agreement between the Governments to address representations to the Chilean Government, and cause it to understand that their wish is to see peace made on the basis of a cession of Tarapacá, reserving all further conditions for further negotiation. The Ministers further declare that they consider it a duty to invite their respective Governments to agree among themselves to take the step indicated at once as an urgent necessity. Upon the receipt of this dispatch Mr. Partridge was telegraphed by the Secretary of State, in substance, that the leave of absence which he had requested was granted, and that he was expected to return to the United States by the first steamer. He was further informed that the action set forth in his dispatch, having been taken by him without authority, was disapproved, and he was directed to so inform those of his colleagues who had acted with him. A telegram was at the same time sent to the Ministers of the United States in London, Paris, and Rome, informing them that Mr. Partridge had joined with the representatives of Great Britain, France, and Italy in a recommendation to their respective Governments to intervene in the Chili-Peru difficulties, and instructing them to inform the Governments to which they are respectively accredited that this action was taken by Mr. Partridge without authority, and has not been approved. Mr. Lowell has answered that this instruction has been complied with. In answer to the inquiry of the Senate, the Secretary of State has the honor to say that the Minister of the United States has not been instructed to invite or accept the mediation of European powers in the settlement of the difficulties there existing. Respectfully submitted,

FREDERICK T. FRELINGHUYSEN.

To the President.

There was an extended investigation during the summer, made by order of the House of Representatives, and conducted by its Committee on Foreign Affairs, into charges that the negotiations of the United States Government in 1881, in Peru, had been made subservient in some measure to the interests of certain claims upon the Peruvian Government, arising out of guano discoveries. The principal inquiry was, "Whether one or more Ministers Plenipotentiary of the United States were personally interested in or improperly connected with the business transactions in which the intervention of the Government was requested or expected in the affairs of Chili and Peru. The discussion of this branch of the inquiry was divided under three heads: 1. The condition of affairs in Chili and Peru which gave rise to the correspondence and business transactions referred to in the resolutions. 2. The history and claims of the parties who requested the intervention of the United States in the affairs of Chili and Peru. 3. Investigation as to the connection between Ministers Plenipotentiary of the United States and these parties, or any business transaction in which they requested or expected the intervention of the United States." After rehearsing the condition of the South American states and the differences which led to the war between Chili and Peru, the report continues: "It is alleged that from the beginning Chili was largely under English influence. Be that as it may, there can be little doubt that, as the fortunes of war steadily set against Peru, her people looked to

the United States for sympathy, if not actual interference in her behalf; while Chili, with her uniform success, became jealous of the power to which her rival looked for aid. As the war progressed adversely to Peru, holders of her bonds and other creditors, real or pretended, and speculators seeking to take advantage of her distress, were naturally interested in her affairs. It was evident that, overborne by Chili, she must either lose her autonomy, submit to a cession of territory, or provide for the payment of a heavy war indemnity. Rightly or wrongly, it was believed that the United States would have more influence than any of the powers in deciding which of these results should prevail. To her, therefore, the interested parties turned their attention, and sought by various methods her intervention in their behalf. We divide these into three: 1. The Cochet claimants; 2. The Landreau claimants; 3. The *Crédit Industriel*." After briefly reciting the grounds upon which each of these claims was based, the report says: "These three interests, the Cochet and the Landreau claimants and the *Crédit Industriel*, representing Peruvian bondholders, were exceedingly anxious that the United States should interfere in behalf of Peru, in order to preserve her autonomy, and enable her to discharge her pecuniary obligations. Their objects related wholly to business or speculation. Neither patriotism nor international policy had anything to do with them. They looked upon the nitrate-beds and guano deposits of Peru as the place whence were to come fortunes rivaling in magnificence and splendor anything Aladdin ever conjured, and the intervention by the United States was the magic lamp by which these creations were to be evoked."

The Peruvian Company was an organization formed for the purpose of prosecuting the Cochet claims chiefly, and its president, Jacob Shipherd, had attempted to secure the interposition of the United States Government in its behalf. Mr. Shipherd and ex-Secretary of State Blaine were among the leading witnesses before the investigating committee. The conclusion of the committee, on a thorough review of the testimony taken, was that the United States Ministers were not concerned in any improper transactions. A separate report was made by Mr. Belmont, of New York, who severely criticised the course of the State Department, in embarrassing the position and influence of the Government by giving countenance to the demands of the various claimants.

The only other important subject of diplomatic correspondence was the Isthmus Canal project, and the relation thereto of the Clayton-Bulwer treaty. (See "Annual Cyclopædia," 1881, PANAMA CANAL.) On May 8th Secretary Frelinghuysen addressed to Minister Lowell a reply to Lord Granville's letter of January 7th. In this he said:

A canal across the isthmus for vessels of all dimen-

sions and every character, under possible conditions herein after referred to, would affect this republic in its trade and commerce; would expose our Western coast to attack; destroy our isolation; oblige us to improve our defenses and to increase our navy, and possibly compel us, contrary to our traditions, to take an active interest in the affairs of European nations. The United States, with its large and increasing population and wealth, can not be uninterested in a change in the physical conformation of this hemisphere which may injuriously affect either the material or political interests of the republic, and naturally seek that the severance of the Isthmus connecting the continents shall be effected in harmony with those interests. This Government, while believing that the Isthmus should not be severed so as to do unnecessary injury to the United States, at the same time appreciates the desire of Great Britain that she should be able, by a short and easy passage from ocean to ocean, to reach her Eastern and American possessions on the Pacific, and that other nations of the world have a similar interest in such a passage. There is, however, no necessary conflict between the political claims of the United States in this matter and the material interests of other nations. A canal across the Isthmus can be created, and, under the protectorate of the United States and the republic whose territory it may cross, can be freely used by all nations. Thus, in some degree, would be continued to the United States the benefit of that conformation of the earth which is now an element of security and defense. . . .

The President, therefore, considers it unnecessary and unwise through an invitation to the nations of the earth to guarantee the neutrality of the transit of the Isthmus, to give their navies a pretext for assembling in waters contiguous to our shores, and to possibly involve this republic in conflicts from which its natural position entitles it to be relieved.

It will doubtless occur to Lord Granville, as it does to us, that international agreements of this kind calling for interference by force, and conferring joint rights upon several independent powers, are calculated to breed dissension and trouble. In times of peace, when there is no call for their exercise, they are harmless, though useless. But, when wars and trouble come, it too frequently happens that differences arise, and so, at the very moment when the agreement should be enforced, it is impossible to enforce it; and such agreements would lead to that political intervention in American affairs which the traditional policy of the United States makes it impossible that the President should either consent to or look upon with indifference.

Mr. Frelinghuysen proceeded to set forth the history and purpose of the "Monroe doctrine," and said:

It is true that this doctrine refers to the political and not to the material interest of America; but no one can deny that to place the Isthmus under the protection and guarantee of the powers of Europe, rather than under the protection of the leading power of this hemisphere, would seriously threaten and affect the political interest of that power.

It is not to be anticipated that Great Britain will controvert an international doctrine which she suggested to the United States, when looking to her own interest, and which, when adopted by this republic, she highly approved; and it is but frank to say that the people of this country would be as unwilling that the pathway of commerce between the Pacific coast and our Eastern market should be under the dominion of the allied European powers as would be the people of Great Britain that the transit from one to another part of her possessions should be under such control.

He then recounted the history of the Clayton-Bulwer Treaty, and the changed condition of things since it was entered into, and concluded as follows:

I may then state the President's views on the whole subject, which I do with an assurance that they will meet with a candid consideration from Lord Granville, and with the hope that they may be substantially concurred in by her Majesty's Government.

The Clayton-Bulwer Treaty was concluded to secure a thing which did not exist and which now never can exist. It was to secure the construction of a canal under the grant of 1849 from Nicaragua that the United States consented to waive the exclusive and valuable rights which had been given to them; that they consented to agree with Great Britain that they would not occupy, fortify, colonize, or assume dominion over any part of Central America, and that they consented to admit her Majesty's Government at some future day to a share in the protection which they have exercised over the Isthmus of Panama.

The Government and people of the United States, though rich in land and industry, were poor in money and floating capital in 1850. The scheme for a canal, even without the complications of the Mosquito protectorate, was too vast for the means of the Americans of that day, who numbered then considerably less than one half of their numbers to-day. They went to England, which had what they had not, surrendered their exclusive privileges, offered an equal share of all they had in those regions, in order, as expressed in the seventh article of the treaty, "that no time should be unnecessarily lost in commencing and constructing the said canal." Through no fault of theirs time was unnecessarily lost, the work was never begun, and the concession failed.

The President does not think that the United States are called upon by any principle of equity to revive those provisions of the Clayton-Bulwer Treaty which were specially applicable to the concession of August, 1849, and apply them to any other concession which has been since or may hereafter be made. The conditions of 1882 are not those of 1852. The people of the United States have now abundance of surplus capital for such enterprises, and have no need to call upon foreign capitalists. The legislative branch of the Government of the United States may also desire to be free to place the credit of the United States at the service of one or more of these enterprises. The President does not feel himself warranted in making any engagement or any admission respecting the extinct provisions of the Clayton-Bulwer Treaty which would prevent or interfere with such a purpose. On the contrary, frankness requires him to say that, as the persons who held the grant which the United States understood to be accepted by the two governments under the provisions of the treaty have not "carried out the proposed enterprise," the United States esteem themselves competent to refuse to afford their protection, jointly with Great Britain, to any other persons or company, and hold themselves free hereafter to protect any interoceanic communication in which they or their citizens may become interested in such way as treaties with the local sovereign powers may warrant and their interests may require.

There are some provisions of the treaty which the President thought might be advantageously retained. With this purpose the present correspondence was opened by the note to you of the 19th November last, in which these points were indicated. The President is still ready, on the part of the United States, to agree that the reciprocal engagements respecting the establishment of a free port at each end of whatever canal may be constructed shall continue in force, and to define by agreement the distance from either end of the canal where captures may be made by a belligerent in time of war, and with this definition thus made to keep alive the second article of the treaty. He hopes that Lord Granville, on future consideration, may not be averse to revising his opinion that such agreements would not be beneficial.

To the suggestion made by Lord Granville, at the close of his note of January 7th, that the United States should take the initiative in an invitation to other powers to participate in an agreement based

upon the convention of 1850, the President is constrained, by the considerations already presented, to say that the United States can not take part in extending such an invitation, and to state with entire frankness that the United States would look with disfavor upon an attempt at a concert of political action by other powers in that direction.

It is not necessary to observe that there is no provision of the Clayton-Bulwer Treaty which authorizes Great Britain to invite or obliges the United States to accept the aid of other nations to protect or to guarantee the neutrality of the Panama route.

Fortunately the want of harmony in the views of the two governments can have at present no injurious influence. No canal yet exists across the Isthmus, and in the natural course of events some time must elapse before one can be constructed; meanwhile the points of divergence between her Majesty's Government and that of the United States may disappear. The President hopes that, long before the subject becomes one of practical importance, her Majesty's Government may be brought to see that the interests of Great Britain and the United States in this matter are identical, and are best promoted by the peaceful policy which he has marked out for this country.

The most authentic information regarding the progress of the work of constructing the canal at Panama is to be found in a report by Lieutenant Rodgers, of the United States Navy, who by order of Admiral Cooper passed over the line late in the year, and examined the plans and condition of the work. In a brief recapitulation of the progress made he said: "The engineers and other employés of the company arrived in Aspinwall at the beginning of 1881. The line of the canal was not then fixed, nor was any part of it cleared; no docks and but little property belonged to the company, so that it was extremely difficult to lodge the employés and to receive the material. In brief, it may be said that wharves have been constructed, ground purchased or made, large quantities of machinery received and put up, villages and workshops built along the line, hospitals erected at Panama and Aspinwall, the line of the canal definitely fixed and its route cleared to a width of 100 metres, and that the work of excavation, which has been delayed by the slow arrival of the necessary machinery, will, within a month, be begun at several points." Lieutenant Rodgers found about 1,500 to 1,600 workmen and navvies employed, at wages varying from \$1.20 to \$2 per day. Several contracts had been made for the excavation of portions of the canal, and a large amount of machinery, including heavy steam dredges, had been procured for the work of excavation under the company's own direction. From conversation with the officers of the company, as well as with others acquainted with affairs on the Isthmus, and from personal observation of the works, drawings, and plans, Lieutenant Rodgers drew the following conclusions:

"That the preliminary work of fixing and clearing the route, of erecting docks, quarters, machine-shops, machinery, rolling-stock, etc., and the accumulating of material and *personnel* have been so far advanced that the work of excavation will be vigorously begun by the beginning of the next dry season; that the work

of excavation has already been begun at two points on the line; that the increase of means of transportation, which has heretofore been insufficient, and the completion of machinery now on the Isthmus will soon enable the work to advance rapidly; that there can no longer be doubt as to the intention of the company to carry out the proposed plan of this canal. The date fixed by M. de Lesseps for its completion is 1888, and the present superior agent, Captain Richier, is sanguine that this will be accomplished. He also believes that the canal can be made for the amount estimated—600,000,000 francs. But I infer from conversation with canal engineers and with others well versed in affairs that the canal will not be finished for some years later, and that the cost will largely exceed the estimate. And it seems probable that this will undergo the experience of many other great projects—that the original subscribers must again subscribe or lose their venture, and that new stockholders will be the ones to share the profits. Up to the present date about 180,000,000 francs have been expended. In this amount the cost of all machinery, ordered or received, is included, as well as the purchase of property. The cost of the Panama Railway, believed to be about \$17,000,000, however, is not included in this amount, special arrangements having been made for its purchase. A short time since the eminent New York engineer, Mr. Stevens, was invited to inspect the works and the studies for plans. I hear he suggested that two or three locks be introduced in order to simplify the difficulties and to lessen the cost of construction. But a canal *à niveau* has been determined upon, and is to be built if the money can be raised, and the climate does not prove too deadly to the laborers. It seems probable that, with the work well begun and advanced, neither difficulty will prove insurmountable." (See COLOMBIA and RODGERS.)

UNITED STATES, CENSUS OF. In the

"Annual Cyclopædia" for 1881 were given the most important returns of the census of 1880 then reported. Additional results are given in the following pages, and statistics relating to special topics will be found in this volume under the titles: COTTON PRODUCT AND MANUFACTURES; CRIMINAL JURISPRUDENCE; EDUCATION AND ILLITERACY; FARMS; INDEBTEDNESS OF THE UNION, AND OF THE STATES, CITIES, COUNTIES, ETC.; INSURANCE; MANUFACTURES OF THE UNITED STATES; RAILROADS; and TELEGRAPHS AND TELEPHONES.

Of the total population (50,155,783) in 1880, 25,518,820 were male and 24,636,963 female. The number of males eighteen to forty-four years of age, both inclusive, was 10,231,239; the number of males twenty-one years of age and over was 12,830,349; the total population ten years of age and over was 36,761,607. The number of persons to the square mile, excluding the Territory of Alaska and the Indian Territory, was 17.29. The number of dwellings in the United States was 8,955,812; persons to a dwelling, 5.6; number of families, 9,945,916; persons to a family, 5.04. The urban population of the United States, from 1790 to 1880, is shown in the following table:

DATE.	Population of United States.	No. of cities.	Population of cities.	Inhabitants of cities in each 100 of the total population.
1790.....	3,929,214	6	131,472	3.3
1800.....	5,308,488	6	210,873	3.9
1810.....	7,239,881	11	356,920	4.9
1820.....	9,638,822	13	475,135	4.9
1830.....	12,866,020	26	864,509	6.7
1840.....	17,069,453	44	1,458,994	8.5
1850.....	23,191,876	85	2,897,586	12.5
1860.....	31,443,321	141	5,072,256	16.1
1870.....	35,558,371	226	8,071,875	20.9
1880.....	50,155,783	286	11,815,547	22.5

The percentage of increase of population during twenty years in the several States and Territories has been as follows:

STATES AND TERRITORIES.	1870 to 1880.	1860 to 1870.	STATES AND TERRITORIES.	1870 to 1880.	1860 to 1870.

OCCUPATIONS.—The total number of persons pursuing gainful vocations in 1880 was as follows:

CLASSES.	Persons occupied.	AGE AND SEX.							
		All ages.		Ten to fifteen.		Sixteen to fifty-nine.		Sixty and over.	
		Male.	Female.	Male.	Female.	Male.	Female.	Male.	Female.
Agriculture.....	7,670,498	7,075,983	594,510	584,867	185,862	5,888,133	495,920	602,983	22,728
Professional and personal services.....	4,074,288	2,712,943	1,361,295	127,565	107,380	2,446,962	1,215,189	138,416	88,276
Trade and transportation.....	1,810,256	1,750,892	59,364	26,078	2,547	1,672,171	54,849	52,643	1,968
Manufacturing, mechanical, and mining.....	3,837,112	3,205,124	631,988	86,677	46,980	2,978,845	577,157	139,602	7,901
All occupations.....	17,392,099	14,744,942	2,647,157	825,187	298,169	12,956,111	2,238,115	938,644	70,878

From this exhibit it appears that the aggregate number of persons returned as having gainful vocations was 17,392,099, being 34·68 per cent of the entire population of 1880, and 47·31 per cent of the population ten years of age and upward. In 1870 the total number of persons borne on the lists of occupations was 12,505,923, being 32·43 per cent of the population of that date and 44·3 per cent of the population ten years of age and upward. It thus appears that the tables of occupation in 1880

embrace a larger part of the total population than those for 1870. The number of persons ten years of age and upward was 28,228,945 in 1870, and 36,761,607 in 1880, an increase of 30·23 per cent. Applying this ratio of increase to the reported occupations of 1870, and by turns to the number in each of the four great classes, the results as compared with the actual numbers returned in 1880 show an excess of 1,105,636, and are as follow:

CLASSES.	Occupations, 1870.	Increased by 30·23 per cent.	Actual number returned in 1880.	Excess.	Deficiency.
Agriculture.....	5,922,471	7,712,884	7,670,498	.....	42,341
Professional and personal services.....	2,684,798	3,496,406	4,074,288	577,832	.....
Trade and transportation.....	1,191,238	1,551,849	1,810,256	258,907	.....
Manufacturing, mechanical, and mining industries.....	2,707,421	3,525,574	3,837,112	311,238	.....
All occupations.....	12,505,923	16,286,463	17,392,099	1,105,636	.....

This comparison of the number of occupations returned in 1870, increased by the rate of increase which took place during the decade in the population over ten years of age, with the number of occupations actually returned in 1880, shows a deficiency in the agricultural class to the extent of 42,341; an excess of 577,832 in the class rendering professional and personal services; 258,907 in that engaged in trade and transportation, and 311,238 in that engaged in manufactures or mechanical and mining industries—making a net excess of 1,105,636 in all classes of occupations. "There is reason to believe," says the census report, "that the deficiency in the agricultural class and the marked increase in the class rendering professional and personal services is due, in some measure, to the reporting of persons as 'laborers' simply who should have been returned as 'agricultural laborers.' In some parts of the country, where agriculture is in a high degree predominant, there is doubtless a certain tendency to drop the qualifying adjective and speak of 'laborers' simply. Whenever it has been within the power of the Census-Office to apply a correction to this error it has been done, yet there probably remains a certain amount of fallacious classification re-

sulting from the failure of enumerators duly to characterize this class of persons. It is also probable that the class of 'laborers' embraces considerable numbers of persons who are employed in connection with manufacturing establishments with sufficient regularity to justify their inclusion in the manufacturing class, were the facts known."

Of the total excess (1,105,636) of occupations in 1880 over 1870, nearly one quarter is of females, the number of females reported as pursuing gainful occupations having increased between 1870 and 1880 in a higher ratio than the number of males. Thus:

Number of females in gainful occupations in 1870.. 1,836,288  
Increased by the ratio of increase in the female population since 1870, viz., 29·03 per cent..... 2,569,862  
Actual number returned in 1880..... 2,647,157

Relative excess..... 277,795

Of this excess about two thirds appears in the class of manufacturing, mechanical, and mining industries, showing the effect upon the employment of women by the extension of the factory system. In examining how the same excess is distributed according to age, it is found that a disproportionate share falls in the class between ten and fifteen years of age, showing a further effect of the extension of the

factory system in the increased employment of young children. Thus:

Number of persons of both sexes between ten and fifteen years of age reported in 1870 as in gainful occupations .....	789,164
Increased by 18.65 per cent, the ratio of increase in the population of this age from 1870 to 1880 .....	877,018
Actual number reported .....	1,118,356
Relative excess .....	241,838

The following is a comparison between the number of persons reported as pursuing gainful occupations in 1880 with those who were not so reported. That is, of the 36,761,607 persons ten years of age and upward, the number not reported as pursuing gainful occupations is 19,369,508. Of this number, 15,378,470 are females.

	Aggregate.	Total ten years and upward.		Ten to fifteen.		Sixteen to fifty-nine.		Sixty and over.	
		Male.	Female.	Male.	Female.	Male.	Female.	Male.	Female.
Population (ten years of age and upward) .....	36,761,607	18,785,980	18,025,627	8,376,114	8,278,869	18,907,444	18,377,002	1,452,422	1,375,250
Number on occupation tables .....	17,392,099	14,744,942	2,647,157	825,187	298,169	12,956,111	2,238,115	938,644	70,873
	19,369,508	8,991,038	15,378,470	2,550,927	2,980,200	921,333	11,098,887	518,778	1,304,388

The following table shows the comparative increase in occupations and in population by States and Territories, from 1870 to 1880:

STATES AND TERRITORIES.	ALL OCCUPATIONS.			Increase in population.
	1880.	1870.	In-crease.	
	Number.	Number.	Per ct.	
Alabama .....	492,790	365,253	35	27

Tennessee .....	447,970	367,987	92	23
Texas .....	523,133	237,125	120	94
Utah .....	40,055	21,517	86	66
Vermont .....	118,584	108,763	9	1
Virginia .....	404,240	412,685	20	23
Washington .....	80,122	9,760	209	214
West Virginia .....	176,199	115,229	53	40
Wisconsin .....	417,455	292,208	43	25
Wyoming .....	8,884	6,645	34	128
The United States ..	17,392,099	12,505,923	39	30

The noteworthy results shown by the foregoing table are thus pointed out and explained in the census report:

1. That in certain States and Territories the ratio of

increase in population is greater, in some cases much greater, than the ratio of increase in gainful occupations reported. This is due to the fact that these communities are losing something of the frontier character and taking on more of the social and domestic character of older communities. Thus we have Arizona gaining 319 per cent in population and only 269 per cent in reported occupations; Idaho, 117 against 43; Kansas, 173 against 160; Montana, 90 against 58; Nebraska, 268 against 248; Nevada, 47 against 20; Washington, 214 against 209; Wyoming, 128 against 34. In a word, these figures indicate the growth of homes with women and children, in the place of the lumbering-camp or the ranch, occupied by men only, all of whom were workers.

2. In another group of States and Territories, where we must suppose that the same force which has produced the above-noted effects is in operation, the rapid incoming of immigrants during the decade, predominately males of adult years, has overpowered this force and caused an increase in the proportion of bread-winners greater than the increase in population. Such are Arkansas, Colorado, Dakota, Iowa, Minnesota, New Mexico, Oregon, Texas, and Utah.

3. Throughout the country generally we have an increase of occupations reported greater than the increase of population. In part this is probably due to the closer enumeration conducted under the provisions of the act of March 3, 1879, which, by making the districts smaller, secured in a much higher degree than had previously been attained that house-to-house canvass which is essential to a correct census, especially as regards the details of enumeration.

In a still higher degree probably the increase of reported occupations is due to the growth of the factory system, to the minuter organization of industry, and to the resulting differentiation of occupations, allowing women and children to find places where they can be useful and earn a livelihood, both in trade and in manufactures, more readily than was the case ten years ago.

We group as follows the States and Territories in their inverse rank, according to the proportion of the total population found in gainful occupations:

	Percentage of occupations to total population.
Utah, West Virginia .....	28
Tennessee .....	29
Ohio .....	31
Arkansas, Illinois, Indiana, Kansas, Kentucky, Missouri, Wisconsin .....	32
Iowa, Minnesota, Texas, Virginia .....	33
Florida, Nebraska, New Mexico, North Carolina, Pennsylvania .....	34
Maryland, Michigan, New Jersey .....	35
Maine, Vermont .....	36
Delaware, Mississippi, New York .....	37
District of Columbia .....	38
Alabama, Connecticut, Georgia, Louisiana, Oregon, South Carolina .....	39

Percentage of occupations  
to total population.

Massachusetts, Washington Territory.....	40
New Hampshire.....	41
Rhode Island.....	42
Dakota, Wyoming.....	43
California.....	44
Idaho.....	43
Colorado, Nevada.....	52
Arizona.....	55
Montana.....	57

We note here, first, that in the great prosperous grain-raising States there is a tendency to keep down the proportion of bread-winners (see the States having less than 33 per cent); second, that the tendency in the cotton-raising States is to a higher percentage of bread-winners, women and children going more largely into the fields; third, that the manufacturing States have also a high percentage, owing to the employment of these classes in shops and factories; and, fourth, that the bread-winners reach their largest proportion in the mining and grazing States and Territories, owing both to the character of the industries there pursued and also to the small number, relatively, of women and children in those regions.

The following table exhibits the total number of occupations reported in each of the principal fifty cities of the United States, and the proportion existing between that number and the total number of inhabitants of both sexes and all ages:

CITY.	Population.	Total in occupation tables.	Percentage.
	Number.	Number.	
Albany, N. Y.....	90,758	32,153	35
Allegheny, Pa.....	78,682	25,958	33
Atlanta, Ga.....	87,409	17,078	46
Baltimore, Md.....	892,813	130,364	39
Boston, Mass.....	362,839	149,194	41
Brooklyn, N. Y.....	565,668	209,065	37
Buffalo, N. Y.....	155,134	54,647	35

Camden, N. J.....	41,659	15,935	36
Charleston, S. C.....	49,984	20,325	41
Chicago, Ill.....	508,185	191,760	38
Cincinnati, O.....	255,139	100,454	39
Cleveland, O.....	160,146	56,919	36
Columbus, O.....	51,647	18,737	36
Dayton, O.....	38,678	14,184	37
Denver, Col.....	35,629	15,737	44
Detroit, Mich.....	116,840	39,245	34
Fall River, Mass.....	48,961	22,685	46
Hartford, Conn.....	42,015	17,212	41
Indianapolis, Ind.....	75,056	27,966	37
Jersey City, N. J.....	120,722	42,856	35
Kansas City, Mo.....	55,785	25,081	45
Lawrence, Mass.....	39,151	19,153	49
Louisville, Ky.....	123,758	45,244	37
Lowell, Mass.....	59,475	29,781	50
Lynn, Mass.....	88,274	16,723	44
Milwaukee, Wis.....	115,567	40,900	35
Minneapolis, Minn.....	46,887	21,802	45
Nashville, Tenn.....	48,850	16,738	39
Newark, N. J.....	136,508	49,066	36
New Haven, Conn.....	62,882	24,155	38
New Orleans, La.....	216,090	78,386	36
New York, N. Y.....	1,206,229	513,377	43
Paterson, N. J.....	51,031	22,570	44
Philadelphia, Pa.....	847,170	848,900	41
Pittsburg, Pa.....	156,389	52,173	33
Providence, R. I.....	104,837	43,573	42
Reading, Pa.....	48,278	15,023	36
Richmond, Va.....	63,600	24,530	39
Rochester, N. Y.....	89,366	34,276	38
St. Louis, Mo.....	380,518	139,985	40
St. Paul, Minn.....	41,473	17,509	43
San Francisco, Cal.....	235,959	104,650	45
Seranton, Pa.....	45,850	16,329	37
Syracuse, N. Y.....	51,792	20,409	39
Toledo, O.....	50,137	17,091	35
Troy, N. Y.....	56,747	23,745	42
Washington, D. C.....	147,293	57,262	39
Wilmington, Del.....	42,473	19,281	45
Worcester, Mass.....	58,291	22,535	39

The above shows that the proportion between the number of persons pursuing gainful occupations and the total population enumerated varies in the several cities in the foregoing list from 33 per cent as a minimum to 50 per cent as a maximum, i. e., from one third to one half—a much narrower range than we noted in the case of the States. The rank of these cities in this respect is as follows:

	Percentage.
Allegheny, Pittsburg.....	33
Detroit.....	34
Albany, Buffalo, Jersey City, Milwaukee, Toledo.....	35
Camden, Cleveland, Columbus, Newark, New Orleans, Reading.....	36
Brooklyn, Dayton, Indianapolis, Louisville, Scranton..	37
Cambridge, Chicago, New Haven, Rochester.....	38
Baltimore, Cincinnati, Nashville, Richmond, Syracuse, Washington, Worcester.....	39
St. Louis.....	40
Boston, Charleston, Hartford, Philadelphia.....	41
Providence, Troy.....	42
New York, St. Paul.....	43
Denver, Lynn, Paterson.....	44
Kansas City, Minneapolis, San Francisco, Wilmington, Atlanta, Fall River.....	45
Lawrence.....	49
Lowell.....	50

These results are thus explained in the census report:

The facts which explain these wide variations in the proportions between the number of persons pursuing gainful occupations and the total population of a city are many. The most important may be grouped under three heads: First, the deviations of the respective populations of these cities to the one side or to the other from the type of a normal population, considered as to age and sex; secondly, the character of the prevailing occupations of the several cities, as determining the question whether women and children shall be largely employed or not; thirdly, social causes, affecting the employment of women in avocations of a certain class, or affecting the employment of children under a certain age.

The variation of the population of a city either way from the type may affect the proportion of the inhabitants who shall be employed in gainful occupations, either to diminish or to increase it, according to circumstances. Thus, going to a far Western city like Kansas City, Minneapolis, or Denver, we shall find the population composed more largely of males than of females, and containing a larger proportion of adults of the working age than is found in a normal population. This is due to the fact that great numbers of the inhabitants of any one of these cities have recently gone thither to seek their fortunes, leaving the women, the children, and the aged behind in the older communities from which they came. Here a high percentage of actual bread-winners is naturally expected. On the other hand, turning to Lowell, Lawrence, and Fall River, where females and children are largely in excess, we find an even higher percentage of bread-winners. This seems like a contradiction. The explanation is found in the factory industries of these cities, which provide employment for enormous numbers of women, who in a Western city would be living at home keeping the house, and of children who, under the same conditions, would be attending school or living at home without gainful occupation.

The influence of the prevailing industries of a city upon the proportion of bread-winners is too familiar to require to be illustrated. The two great iron-making cities of Allegheny and Pittsburg keep only a bare third of their population at work, because the labor of women and children would be of little account. Cleveland, another great iron-making city, has but 36 per cent of its population engaged in gainful occupations; but a great center of the textile industries, like Paterson, Fall River, Lawrence, or

Lowell, keeps nearly or quite one half of its men, women, and children at work. Philadelphia, which is both a great weaving city and a center of heavy manufactures, especially of iron, stands in a mean between the two, having 42 per cent of its population engaged in gainful occupations.

Among the social causes adverted to as affecting the proportion of bread-winners may be mentioned the school system. In some cities the public schools are much more highly organized, more attractive, and are supported by a stronger public sentiment than in others. In the former class of cases we should look to see the influence of the schools acting in diminution of the number of young persons of either sex engaged in gainful occupations.

**FOREIGN-BORN POPULATION.**—The total number of foreign-born persons in the United States in 1880 was 6,679,943; in 1870 the number was 5,567,229. The following shows the nativity of the foreign-born population of 1880:

Africa, not specified	2,204
Asia, not specified	1,054
Atlantic islands	7,512
Australia	4,906
Austria proper	98,068
Belgium	15,585
Bohemia	85,361
British America, total	717,157
Canada	610,090
New Brunswick	41,788
Newfoundland	4,789
Nova Scotia	51,160
Prince Edward Island	7,537
British America, not specified	1,793
Central America	707
China	104,468
Cuba	6,917
Denmark	64,196
Europe, not specified	9,814
France	106,971
German Empire, total	1,066,742
Baden	137,885
Bavaria	171,699
Brunswick	4,624
Hamburg	8,854
Hanover	102,594
Hessen	72,400
Lübeck	264
Mecklenburg	45,959
Nassau	6,253
Oldenburg	9,924
Prussia, not specified	624,880
Saxony	43,708
Welmur	635
Württemberg	108,223

<b>Total</b>	<b>6,679,943</b>

**FOREIGN PARENTAGE.**—In 1870 the number of persons, whether themselves born abroad or in the United States, one or both of whose parents were foreigners, was ascertained and reported by the census for the first time. The statistics of foreign parentage for 1870, however, gave no clew to the contribution made to this total by the several foreign countries appearing in the tables of foreign birth; i. e., there was nothing to show how many persons had German fathers or German mothers, how many Irish fathers or Irish mothers, etc. In compiling the census of 1880 a very elaborate tabulation was undertaken, in order to secure the ratios of contribution to the population foreign in the second degree made by each principal foreign country. For this purpose the populations of 28 States, 7 Territories, and the District of Columbia were tallied according to a highly complicated form in order to secure the ratios desired. The application of these ratios to the total number of persons residing within the United States who were born in each of the specified foreign countries, according to the table of nativity, would indicate that throughout the United States there were, at the date of the census of 1880, persons having one or both parents foreign born, or foreign-born persons having parents both native born, as follow:

Number having Irish fathers	4,529,523
Number having German fathers	4,883,842
Number having British fathers	2,639,508
Number having Scandinavian fathers	635,405
Number having British-American fathers	989,247
Number having fathers born in countries other than those specified	1,321,485
Number having native fathers and foreign mothers	573,434
Number of foreign persons having both parents native	83,252

**Total**..... 14,955,996

Number of persons having Irish mothers	4,448,421
Number having German mothers	4,557,629
Number having British mothers	1,790,200
Number having Scandinavian mothers	631,309
Number having British-American mothers	931,403
Number having mothers born in countries other than those specified	1,226,113
Number having native mothers and foreign fathers	1,337,664
Number of foreign persons having both parents native	38,252

**Total**..... 14,955,996

**DEFECTIVE, DEPENDENT, AND DELINQUENT CLASSES.**—The following table shows the number of insane, idiotic, blind, and deaf-mutes in the United States, as returned by the last four censuses:

CLASS.	1880.	1870.	1860.	1850.
Insane	91,997	37,432	24,042	15,610
Idiots	76,895	24,527	18,930	15,787
Blind	48,928	20,320	12,658	9,794
Deaf-mutes	33,578	16,205	12,821	9,508
<b>Total</b>	<b>251,698</b>	<b>98,484</b>	<b>68,451</b>	<b>50,994</b>

The total population for each of the years named was as follows: In 1850 it was 23,191,876; in 1860, 31,443,321; in 1870, 38,558,871; and in 1880, 50,155,783. In other words, although the population has a little more than

doubled in thirty years, the number of defective persons returned is nearly five times as great as it was thirty years ago. During the past decade (or since 1870) the increase in population has been 30 per cent; but the apparent increase in the defective classes has been a little more than 155 per cent. "It is not possible," says Special Agent Frederick H. Wines, "to believe that there has, in fact, been any such increase of the defective classes as is indicated by the figures given in the tables above. The inference is irresistible that either the enumeration in 1880 is excessive, or else it was incomplete in 1870 and in the years previous." After pointing out the difficulty of getting accurate statistics on these subjects, Mr. Wines expresses the belief that, in the census of 1880, "a much more perfect enumeration of the defective classes, especially of the insane and idiotic, has been secured than ever before in the history of this or, perhaps, of any other nation." Admitting that "it would be claiming too much to assert that the census lists are, even after all the labor bestowed upon them, absolutely accurate," he believes

that the figures are "as nearly correct as it is possible to make them at the present time with our present facilities for procuring them."

Of 91,997 insane in the United States in 1880, there were in hospitals and asylums for the insane (not including those in almshouses) 40,942, or over 44 per cent of the entire number; of 76,895 idiots, there were in training-schools for the feeble-minded 2,429, or a little over 3 per cent; of 48,928 blind, there were in schools and industrial homes for the blind 2,158, or less than 4½ per cent; and of 33,878 mutes, there were in schools for the deaf (not counting those under instruction in day-schools, and so not enumerated) 5,267, or nearly 16 per cent. "This statement," says Mr. Wines, "may serve to give a summary notion of the urgency of the demand for institutions of the several descriptions named, both in the aggregate and in proportion to the number of individuals in each of the four great defective classes."

The following exhibit shows the number in 1880 in each of the four classes by sex, nativity, and race:

CLASS.	Total.	Male.	Female.	Native.	Foreign.	White.	Colored.
Insane.....	91,997	44,408	47,589	65,651	26,346	85,840	*6,157
Idiots.....	76,895	45,309	31,586	72,888	4,007	67,816	†9,579
Blind.....	48,928	26,748	22,180	40,569	8,329	41,278	‡7,650
Deaf-mutes....	33,878	18,567	15,311	80,507	3,371	80,661	§9,217
Total.....	251,693	135,032	116,666	209,645	42,053	225,095	26,603

The number of persons in every 100,000 in each of the classes named, who are male or female, native or foreign, white or colored, is as follows:

CLASS.	Total.	Male.	Female.	Native.	Foreign.	White.	Colored.
Insane.....	100,000	48,271	51,729	71,862	28,693	98,307	6,693
Idiots.....	100,000	58,928	41,077	94,789	5,211	87,543	12,457
Blind.....	100,000	54,668	45,332	82,977	17,023	84,365	15,635
Deaf-mutes....	100,000	54,805	45,195	90,050	9,950	90,504	9,496
Total.....	100,000	53,648	46,352	83,292	16,708	89,431	10,569

"From this table," says Mr. Wines, "it appears that insanity attacks women more often than it does men, but that, on the other hand, men are more liable to the other three forms of misfortune than are women. The negro population is much more liable to idiocy than to insanity. Both the negro and the foreign population are singularly more liable to blindness than to deafness. The tendency to insanity among the foreign population is especially worthy of attention. It may be accounted for in many ways: for instance, by the change of climate and of habits of life, by the increased anxiety and effort to advance in the scale of social respectability, by homesickness, and in general by the removal of the props which sustain and steady a man who does not emigrate, but remains in the vicinity where he was born. The same increased tendency to insanity may be discovered (but in a less marked degree) in Americans who remove from one section of the country to another, especially from the Atlantic to the Pacific coast."

The total number of paupers enumerated in almshouses is 67,067, as follows: Male, 35,952; female, 31,115; native, 44,106; foreign, 22,961; white, 61,310; colored, 5,757, including 18 Chinese and 33 Indians. The special agent remarks that "to these may be added, if any one is so disposed, 21,508 out-door paupers reported to the Census-Office, but no reliance whatever can be placed upon this figure. It is very far below the actual number, as will be apparent when it is stated, by way of illustration, that only thirteen out-door poor are returned from the city of Boston."

The number of prisoners in confinement in the United States, June 1, 1880, was 59,255. This total does not include 11,340 inmates of juvenile reformatories. Of the 59,255, 54,186 were males and 5,069 females, 46,338 native and 12,917 foreign, 42,294 white and 16,961

\* Including 105 Chinese, 53 Indians, 1 Japanese, and 2 East Indians.

† Including 5 Chinese and 84 Indians.

‡ Including 22 Chinese and 244 Indians.

§ Including 8 Chinese and 37 Indians.

colored. Among the colored are included 531 Chinese, one Japanese, and 161 Indians.

**MORTALITY STATISTICS.**—The total number of deaths recorded and tabulated, as occurring in the United States during the census year of 1880 is 756,893, being a death-rate of 15.1 to the 1,000. This death-rate is decidedly higher than that given in the census of 1860, namely 12.5, and of 1870, namely 12.8 per thousand. "But this," says Surgeon John S. Billings, of the United States Army, under whose direction the census mortality statistics of 1880 were compiled, "does not indicate any actual increase in the number of deaths as compared with the living population. It shows, rather, that the efforts made in the census of 1880 to obtain more complete returns of deaths than had been collected in previous enumerations have been to some extent successful."

After adding to the number of deaths returned by the census enumerators 61,020 deaths reported by physicians throughout the country, and making a computation showing an average mortality for the United States of 18.2 per thousand of living population per annum, Dr. Billings says:

The actual mortality for the whole country during the census year was not less than 17 nor greater than 19 per thousand. This rate compares favorably with that of all other civilized countries. The death-rate in the rural population of England, comprising ten and a half million people, in the year 1880, was 18.5 per thousand. For the whole of England, for the same year, it was 20.5 per thousand. For Scotland, in 1878, it was 21.3 per thousand; in the mainland rural group of Scotland for the same period it was 17.3 per thousand. The low death-rate in this country is considered to be due to the comparative absence of overcrowding, and to the more general and equitable distribution of the means of supporting life, including especially the abundant food-supply of good quality for all classes of people.

In a population of 43,402,970 whites, there are recorded 640,191 deaths, giving a death-rate of 14.74 per thousand. In a population of 6,752,813 colored, there are recorded 116,702 deaths, showing a death-rate of 17.28 per thousand. Of the total number of deaths reported, 391,960 were of males and 364,933 were of females, the total living population being 25,518,820 males and 24,636,963 females. For every thousand deaths of females there were 1,074 of males. These figures give a male death-rate of 15.35 per thousand and a female death-rate of 14.81 per thousand. It should be borne in mind, however, that the proportion of female to male deaths is somewhat greater than these figures would indicate.

Of the 390,644 deaths of males in which the ages are recorded, 96,894 occurred under one year of age and 163,880 under five years of age. Of the 363,874 deaths of females of which the ages are recorded, 78,372 were under one year of age and 138,926 under five years of age. The proportion of deaths of males under one year of age to all deaths recorded was 248.03 per thousand; of those under five years of age, 419.51 per thousand. The proportion

of deaths of females under one year of age to those of all ages recorded was 215.38 per thousand; of those under five years of age, 881.85 per thousand. The proportion to all deaths of which the ages are recorded of deaths of persons from five to fifteen years of age was 87.57 per thousand; from fifteen to sixty years of age, 299.66 per thousand; and over sixty years of age, 172.40 per thousand.

Of the total number of deaths, the causes of death were either not reported at all, or were so reported as to be necessarily classed as unknown in 23,053 cases, leaving a total of 733,840 cases of death in which the causes are distinguished. It is believed that the causes of death have been obtained much more accurately than in any preceding census, owing to the very general aid and co-operation of the physicians of the country in revising and correcting the enumerators' returns with reference to this point. The number of cases of deaths reported as due to diphtheria is: Males, 18,849; females, 19,549; total, 38,398; giving a proportion of 52.32 per thousand of all deaths in which the causes are reported. The total number of deaths from diphtheria under one year of age was 2,896; under five years of age, 20,035; between five and fifteen years of age, 16,162. The total number of deaths from enteric (typhoid) fever reported is: Males, 11,852; females, 11,053; total, 22,905; being in the proportion of 31.21 per thousand of all deaths having reported causes. The total number of deaths from this disease under one year of age was 654; under five years, 2,707; from five to fifteen years, 3,952; from fifteen to sixty years, 13,945; over sixty years of age, 2,248. Neither diphtheria nor enteric fever are especially diseases of the large cities. They appear to be more prevalent in the small towns and rural districts which have no general water-supply or systems of sewerage, but obtain their water from springs and wells and observe the usual custom of storing excreta in cesspools or vaults.

The total number of deaths reported as due to malarial fevers is: Males, 10,276; females, 9,985; total, 20,261; giving a proportion of 27.61 per thousand of all deaths from reported causes. The total number of deaths from these fevers under one year of age was 2,002; under five years, 6,182; from five to fifteen years, 3,482; from fifteen to sixty years, 7,909; sixty years and over, 2,623.

Consumption is the cause of death to which the greatest number of cases are referred in the records, there being reported 40,619 males and 50,932 females as dying of this disease, giving a proportion of 124.75 per thousand of all deaths having reported causes, or a little over 12 per cent.

In the north Atlantic and lake regions the mortality from consumption is highest in the small towns and rural districts, while on the Gulf coast the mortality is greatest in the city of New Orleans, in which it is higher than in

the Northern cities. This is probably due to the fact that New Orleans is not sewered or drained as are the Northern cities, and has the soil-water very near the surface.

The total number of deaths reported as due to accidents and injuries is 35,932, divided as follows: Burns and scalds, 4,786; drowned, 4,320; exposure and neglect, 1,299; gunshot-wounds, 2,289; homicide, 1,386; infanticide, 40; injuries by machinery, 120; railroad accidents, 2,349; suffocation, 2,339; suicide by shooting, 472; suicide by drowning, 155; suicide by poison, 340; other suicides, 1,550; sunstroke, 557; other accidents and injuries, 13,980.

The act of Congress of August 7, 1882, authorizes the publication of additional copies of the reports of the tenth census as follows: Complete set, 10,000; report on population, 20,000; agricultural, 20,000; manufactures and mechanics, 10,000; compendium, 100,000. Provision is made for distribution by the Secretary of the Interior to libraries, public institutions, and persons named by Senators and Representatives in Congress. The same act orders the publication of 6,000 copies of the report on the history of the national loan for the use of the Treasury Department, and 1,500 copies of the report on fish and fisheries, for the use of the Fish Commission. The entire returns of the census are estimated to make about 20,000 quarto pages. It is expected that about fifteen volumes, containing an aggregate of about 15,000 pages, will be published. The compendium, containing 1,800 octavo pages, was issued early in 1883.

**UNIVERSALISTS.** The statistics reported by the several State Conventions to the General Convention in October, 1882, show that the Universalist churches in the United States and the Province of Ontario are represented by a total of 778 parishes and 33,823 families.

The *Universalist General Convention* met in Philadelphia, Pa., in October. Mr. J. D. W. Joy, of Massachusetts, presided. The trustees of the convention reported that the receipts during the year from all sources amounted to \$15,810. The total proceeds of the missionary boxes had been \$1,888, of which \$908 had been

applied by the State Conventions, and \$980 were included in the receipts returned by the trustees. The annual contributions amounted to \$3,424. The Murray centenary fund amounted to \$124,018. The scholarship fund had increased from \$10,840 to \$15,101, the increment having arisen chiefly from the repayment of loans. A committee of nine persons, appointed by the previous General Convention to consider whether any change ought to be made in the Winchester profession of faith, reported that it had decided, at a meeting held in New York in February, that it was expedient to make some change in the second article of that document, and each member of the committee was requested to make a draft of the profession as he would like it to be. At a second meeting, held in Philadelphia, it appeared that four of the five members of the committee were in substantial agreement on the subject; but, as the committee had not had time to give as close a scrutiny to the matter as it required, it was decided to ask the convention for more time to complete the work. The committee was continued for another year. On the subject of missions the Board of Trustees reported, suggesting that if the means at its disposal were to be increased, one or more financial agents should be appointed. If it had \$30,000 a year, it could make a beginning. The gifts of the last year for missionary work, including all that had been raised for church purposes outside of the parishes, and excluding the income of the funds and \$100,000 raised for parish debts and \$100,000 for schools and colleges, were estimated to have amounted to \$45,000; but more than \$18,000 of this had been raised for the church in Washington. The time had come, the report continued, for the Church to look toward the establishment of missions in heathen lands. Its present means, of course, would not permit such an enterprise, but some of its people were already desirous of making contributions toward that end; and such contributions, it was believed, judging from the history of other churches, would promote and stimulate the home work. Much benefit had already been received from the encouragement of State missionary work.

## V

**VENEZUELA.** (See "Annual Cyclopædia" for 1881.)

**VERMONT. STATE GOVERNMENT.**—The State officers at the beginning of the year were as follows: Governor, Roswell Farnham; Lieutenant-Governor, John L. Barstow; Secretary of State, George Nichols; Treasurer, John A. Page; Auditor, E. Henry Powell; Superintendent of Education, Justus Darrt; Railroad Commissioner, Wayne Bailey. Judiciary, Supreme Court: Chief-Judge, Homer E. Royce; Assistant-Judges, Timothy P. Redfield, Jonathan Ross, H. Henry Powers, Wheelock G. Veazey, Russell S. Taft, and John W. Rowell. Changes during the year are noticed below.

**LEGISLATURE.**—The Legislature met in biennial session on the 4th of October, and adjourned on the 28th of November. On the 5th of October the inauguration took place, and the messages of the outgoing and incoming Governors were received. On the 7th of November, in joint session, the following officers were re-elected: George Nichols, Secretary of State; E. Henry Powell, Auditor of Accounts; Justus Darrt, Superintendent of Education. On the

8th, Homer E. Royce was re-elected Chief Judge of the Supreme Court, and the following were re-elected Assistant-Judges: T. P. Redfield, Jonathan Ross, H. Henry Powers, Wheelock G. Veazy, Russell S. Taft, and John W. Rowell. On the 28th, Wayne Bailey was re-elected Railroad Commissioner. One hundred and fourteen acts of a public character were passed.

The Hooker revenue bill is No. 1, followed by the act revising, consolidating, and amending the laws relating to the grand list. Act No. 3 reduces to \$1,500 the aggregate amount of savings-bank deposits which any resident of the State may have free from taxation on the grand list. The act provides forfeits and penalties for evasions or attempts to evade the provisions of this act. By No. 4 owners of fowls to the value of more than twenty dollars are subject to taxation on the excess. No. 6 provides for the taxation of the Vermont Central Railway when any person or corporation other than the original company, in any character or right, is operating that road. No. 12 establishes the outer bound of puppyhood at eight weeks, and fixes the license-fee for every male dog at one dollar and for every female at four dollars. No. 13 contains the amendments to the Judevine highway law—amendments which practically destroy the one feature of that measure which made it possible for it to become a law two years before. The cumbersome and practically prohibitory machinery of the law relating to complaints for insufficiencies is retained; but the section which limited the liability of towns to damages received on bridges exceeding eight feet span is amended to include all bridges, culverts, and sluice-ways. No. 18 gives tax-payers who work out their taxes fifteen cents an hour for their labor. No. 19 makes the text-books of schools recommended by the text-book committee of 1879 the authorized books till November 1, 1889, and the use of any other books except for reference is unlawful. No. 22 allows teachers while their schools are in session to attend teachers' institutes or educational meetings held pursuant to law, for a period not exceeding three days without losing their time. No. 35 has reference to the organization of the Vermont Central Railway Company, and is intended to facilitate the same. Nos. 36 to 40 relate to railway matters of general interest; 41 to 46, to the liquor-traffic; and 47 to 49, to the care and custody of the insane. Owners or keepers of public billiard or pool tables or bowling-alleys will need to read and heed No. 53. The penalty for allowing any minor to play these games, in opposition to the written request of parent, guardian, or school principal, is not less than ten dollars. No. 54 forbids posting bills or painting placards or notices on bridges, trees, etc., without the consent in writing of the selectmen of the town. Individuals who indulge in smashing street-lamps, or lamps in the grounds about

public buildings, are liable under No. 55 to a fine of not more than fifty dollars, or three months' imprisonment. No. 70 provides for suits by and against associations and joint-stock companies, and obliges such organizations doing business in the State to designate some person in every county in which they are doing business, upon whom legal process may be served. If such designation is not made, legal process may be served upon any "conductor," "messenger," "express agent," "operator," "manager," or any person or employé of a company holding a position corresponding to the above. No. 79 imposes wise restrictions against the overcrowding of public halls and theatres. All passage-ways must be kept clear of chairs. No. 81 is aimed at "dead-beats" who try to defraud hotel-keepers of food and lodgings. No. 82 dooms the murderous toy-pistol. No. 83 makes an attempt to poison food, drink, medicine, or springs punishable with not more than twenty years in the State-Prison. The twenty-two constitutional amendments proposed by the Senate to the House two years before, and by that body reduced to six, were by their Legislature cut down to two: the first providing for an additional oath which will, if finally adopted by the people, keep postmasters and other United States officers out of the Legislature; the second making the officers of Auditor and Secretary of State elective by the people. The vote of the people on these amendments is to be taken on the 6th of March, 1883.

Act No. 1 contains the following important provisions:

SECTION 1. Funds for the payment of State expenses shall be raised by direct State taxes upon the corporate franchise or business in this State of railroad, insurance, guarantee, express, telegraph, telephone, steamboat, car, and transportation companies, savings-banks, savings institutions, and trust companies, as provided in this act, and shall be payable in money to the State Treasurer for the use of the State.

Sec. 2. The Governor, in the year 1882 and biennially thereafter, shall appoint, with the advice and consent of the Senate, a Commissioner of State Taxes. He shall report biennially to the General Assembly.

Sec. 11. Every corporation, person or persons owning or operating a railroad in this State—whether as owner, lessee, receiver, trustee, or otherwise—shall pay a tax to the State on the entire gross earnings of such railroad, if such railroad is situated wholly within the State. If such railroad is situated partly within and partly without the State, the tax shall be upon such proportion of the entire gross earnings of such railroad as the mileage of trains run in this State bears to the mileage of all the trains run on the entire main line of the road.

Sec. 12. The tax upon such earnings shall be rated according to the earnings per mile of road in this State, and is hereby assessed at the rate of two per cent on the first two thousand dollars a mile, or total earnings if less than that sum; at the rate of three per cent on the first thousand or part thereof above two thousand dollars a mile; at the rate of four per cent on the first thousand or part thereof above three thousand dollars a mile; and when the earnings exceed four thousand dollars a mile, at the rate of five per cent on all earnings above that sum.

Sec. 14. When a railroad is operated in this State by a corporation, person, or persons, by virtue of a lease or other contract, the aforesaid tax shall be paid

by the lessee of such railroad, or holder of such contract, as the case may be; and the said tax shall be charged against and deducted from any payments due or to become due the lessor of such railroad, or person, persons, or corporation granting such contract, as the case may be, on account of such lease or contract, unless in the provisions of such lease or contract it is stipulated otherwise.

Sec. 15. Every home or foreign insurance company, or association doing insurance business in this State, or guarantee company doing business in this State, shall pay a tax to the State, which is hereby assessed, at the rate of two per cent per annum, on the gross amount of premiums and assessments collected in their business in this State.

Sec. 16. Every life-insurance company incorporated by this State shall, in addition to the tax assessed by the preceding section, pay a tax to the State, which is hereby assessed, at the rate of one half of one per cent annually, on all surplus over and above the necessary reserve, computed at four per cent on all existing policies. The value of the real estate owned by such insurance companies shall be deducted from the surplus.

Sec. 17. In determining the amount of tax to be assessed under the provisions of section 15, there shall be deducted from the full amount of premiums and assessments, unused balances on notes taken for premiums on open policies, all sums paid for return premiums on canceled policies, dividends to policy-holders, and sums actually paid to other insurance companies incorporated under the laws of the State, or to the agents within this State of foreign companies for reinsurance on risks, for which a tax on the premium would be due had no re-insurance been effected: *Provided*, That nothing in this section shall be so construed as to allow dividends in scrip, or otherwise in stock, mutual or mixed companies, to be considered return premiums.

Sec. 18. Every savings-bank and savings institution incorporated by this State, and doing business herein, shall pay a tax to the State, which is hereby assessed, at the rate of one half of one per cent annually, upon the average amount of its deposits and accumulations, deducting therefrom the average amount of its assets invested in real estate owned by such corporation, and also the amount, if any, of individual deposits in excess of fifteen hundred dollars each, listed to depositors in towns in this State where such depositors reside.

Sec. 19. Every trust company and "savings-bank and trust company" incorporated by this State, and doing business herein, shall pay a tax to the State, which is hereby assessed, at the rate of one per cent annually upon the average amount of its deposits, including money or securities received as trustee under order of court or otherwise, deducting therefrom such percentage as such institution pays to the United States Government so long as such tax is paid, and also the average amount of its assets invested in real estate owned by such corporation, and also amount, if any, of individual deposits in excess of fifteen hundred dollars each, listed to depositors in towns in this State where such depositors reside.

Sec. 20. No other tax shall be assessed on such deposits or accumulations in case of savings-banks, or on such deposits in case of trust companies and "savings-banks and trust companies," or against the depositors on account thereof, except individual deposits exceeding in the aggregate fifteen hundred dollars.

Sec. 21. Every corporation, joint-stock company, person or persons doing express business in this State shall pay a tax to the State which is hereby assessed at the rate of three per cent annually on the gross receipts of their business transacted in this State.

Sec. 22. Every corporation, joint-stock company, person or persons doing telegraph business in this State shall pay a tax to the State which is hereby assessed at the rate of three per cent annually on the gross receipts of their business transacted in this State.

Sec. 23. Every corporation, joint-stock company, person or persons doing telephone business in this State, shall pay a tax to the State which is hereby assessed at the rate of three per cent annually on the gross receipts of all their business in this State, including sums received for rental of instruments. But there shall be deducted from such gross receipts the amount paid by such corporation, company, or persons to any telegraph company with whom they are connected.

Sec. 25. Every steamboat, car, or transportation company incorporated under the laws of this State shall pay a tax to the State, which is hereby assessed, at the rate of two per cent annually on the gross receipts of all their business.

Sec. 26. The Commissioner of State Taxes may examine upon oath any officer, agent, or clerk of a corporation or persons operating a railroad or doing express, telegraph, or telephone business in this State, or of an insurance company doing business in this State, or of a savings-bank, savings institution, or trust company incorporated by this State, and doing business herein, or of a steamboat, car, or transportation company incorporated under the laws of this State, and may examine any book of accounts kept by such corporation, company, or persons, concerning all matters as to which information is required to carry out the purposes of this act.

Sec. 29. Real and personal estate used in operating a railroad, or used in carrying on express, telegraph, or telephone business in this State, and real and personal estate owned by steamboat, car, and transportation companies taxed by this act, also stock in steamboat, car, and transportation companies, which companies are taxed by this act, shall not hereafter be set in the grand list, and shall not be required to be stated in the inventories required to be returned to listers by section 324 of the revised laws. And listers in making annual grand lists hereafter shall omit from the last quadrennial appraisal all real estate mentioned in this section. But this act shall not be construed to take out of the grand lists of 1882, or of any previous year, any property included in such lists, or to diminish the liability of any person to the payment of taxes assessed or to be assessed on such lists.

Sec. 48. So much of the charter of a corporation or company organized under the laws of this State as exempts such corporation or company from taxation, so far as it conflicts with this act, is hereby repealed.

A bill abolishing the district-school system, and establishing a town system, failed to pass.

FINANCES.—The following is an abstract of the report of the Auditor for the sixth biennial term, covering the transactions for the two fiscal years ending July 31, 1882: The orders drawn at the Auditor's office for the year ending July 31, 1881, amount to the sum of \$277,585.24, and to \$280,619.38 for the year ending July 31, 1882. The orders drawn at the offices of the county clerks to settle the accounts of county clerks, sheriffs, jailers, justices of the peace and judges of municipal courts, amount for the year ending July 31, 1881, to the sum of \$43,714.88, and to \$39,968.29 for the year ending July 31, 1882.

Auditor Powell says that the change in the method of accounting for fines and costs by requiring from each justice a sworn statement of all business done and the disposition of each case, before the allowance of bills, with other legislative acts of the last session, has wrought a great saving to the State.

The comparative table given below shows the fines and costs collected biennially for the

past three terms by the various justice and municipal courts:

TERMS.	Court orders.	Net court expenses.	Fines and costs collected.
Term ending 1878...	\$165,922 73	\$223,886 89	\$25,588 76
Term ending 1880...	185,379 97	176,565 84	45,007 18
Term ending 1882...	83,683 17	93,728 76	66,576 47

This table shows the fines and costs collected in each year, for the last two years, to be about \$17,000 more than for years preceding.

Probate returns for the last two years show a net excess of probate fees of \$109, against a net deficit of \$1,200 in former terms.

The orders drawn by the Auditor for the year ending July 31, 1882, contain the following items:

Court expenses.....	\$39,350 07
State printing, stationery, etc.....	6,640 87
House of Correction expenses.....	9,425 76
Reform-School expenses.....	21,508 63
State-Prison expenses.....	49,598 64
Salaries of seven Supreme Court Judges.....	17,478 94
Salaries of Probate Judges.....	11,750 00
Salaries of State Attorneys.....	5,900 00
Salary of Governor.....	1,200 00
Salary of Treasurer.....	1,700 00
Salary of Secretary of State.....	2,200 00
Salary of Auditor.....	1,400 00
State militia expenses.....	18,176 72
Department of Agriculture expenses.....	2,586 92
Vermont Insane Asylum.....	37,198 78

The figures of the second appraisal of the real and personal estate, under the act to equalize taxation, passed in 1880, proves the measure to be an unqualified success in its general results. The total valuation for 1882 of the taxable property and polls in the State is as follows:

Amount of real estate.....	\$106,577,559
Amount of personal estate.....	46,996,584

Total valuation.....\$153,573,584

One per cent of this valuation is taken as a basis for assessing taxes, and which, reduced, makes a grand list of \$1,535,735.84. To this add 73,757 polls at \$2, less deductions, and we have a list aggregating \$1,680,529.84. For 1881 the figures were as follow:

Amount of real estate.....	\$102,437,102 00
Amount of personal estate.....	46,896,967 00

Total.....	\$149,334,069 00
One per cent of which is.....	1,493,340 69
Add polls, 73,643, at \$2 each.....	\$147,296
Less deductions.....	8,016—
	144,280 00

Grand list.....\$1,687,620 69

A comparison of the grand lists for 1881 and 1882 shows the increase of the real-estate valuation of the latter year over the previous year to be \$4,140,457. On personal property the increased valuation is some \$100,000.

The following table shows the changes in the State grand list:

	1878.	1879.	1880.
Real estate.....	\$92,563,432	\$71,017,961	\$71,114,747
Personal property...	16,845,128	15,375,538	15,037,262
Total.....	\$109,418,555	\$86,393,514	\$86,152,009

The direct taxes levied and collected for the last two years were \$479,097.

The report of the Inspector of Finance shows the condition of the savings-banks and trust companies in the State, on the 30th day of June, 1882.

The whole number of depositors in these financial institutions at the date of the report was 42,583, an increase during the year of 4,204.

The deposits aggregated \$12,675,269.71, an increase of \$2,015,784.59 since the report of 1881. Of the deposits \$10,221,178.52 belongs to depositors living in Vermont, and \$2,454,091.19 to non-residents. The average amount to the credit of each depositor is \$297.66. There are 27,996 depositors having less than \$250 on deposit. Three hundred and seventy-three depositors have over \$2,000 each to their credit. The Inspector recommends that the Legislature reduce the amount allowed to the credit of any one individual depositor, to draw interest, to \$1,500. The interest credited to depositors' accounts during the year (including dividends to stockholders of trust companies), amounts to \$382,821.05, an increase of \$30,849.71 over the previous year. The present undivided earnings, interest, and surplus held by all these banks amount to \$439,624.21, an increase of \$105,695.41. There has been an increase in the amount loaned on mortgage security of \$118,197.93.

The number of savings-banks and trust companies in the State is 22; the total expenses of these institutions for the year was \$112,876.75; the amount of United States taxes paid on deposits was \$14,056.28; the amount of State tax was \$53,681.12.

Omitting all payments on account of loans, savings-bank tax, United States deposit, soldiers' and trust funds, that are not taken into account as a part of the current expenses of the State, the disbursements for the

Two years ending August 1, 1882, were.....	\$719,171
Two years ending August 1, 1880, were.....	778,911
Two years ending August 1, 1878, were.....	844,572
Two years ending August 1, 1876, were.....	810,857
Two years ending August 1, 1874, were.....	697,688
Two years ending August 1, 1862 (omitting all war expenses, also), were.....	864,772

The Auditor estimates that \$70,000 of the expenses of 1881 and 1882 were exceptional. Admitting this, and deducting but \$16,000 as exceptional from expenses of 1861 and 1862, during which time one extra and two regular sessions were held, we find the annual current expenses \$150,000 greater than twenty years since, and they were much larger at that time than they should have been.

The financial condition of the State, as shown by the Treasurer's report, is as follows:

LIABILITIES.	
Due towns, United States surplus fund.....	\$18,397 62
Due soldiers' account.....	8,959 02
Due suspense account (outstanding checks)....	1,940 24
Due bonds and coupons due 1876.....	4,860 00
Due towns on account of savings-bank tax.....	42,760 86
Due Agricultural College fund due 1890.....	185,500 00
Due orders not presented.....	2,666 55
Total.....	\$209,588 79

## ASSETS.

Cash and deposits.....	\$126,118 60
Uncollected taxes.....	218 94
Due from savings-banks.....	23,167 63
Total.....	\$154,505 23

The only items in the list of liabilities that are likely to be called for are suspense, savings-bank tax, and orders not presented, amounting to \$47,367.15, leaving an excess of available assets over current liabilities August 1, 1882, of \$107,138; on the same basis, August 1, 1878, \$153,009; on the same basis, August 1, 1880, \$199,483.

The following table shows the total acreage and average valuation per acre of the farms (exceeding ten acres) in each county, the appraised valuation thereof as equalized by the State Board, and the aggregate valuation of all real estate for purposes of taxation (except road-beds of railways) for the year 1882:

COUNTIES.	Acreage of farms over ten acres.	Average value per acre.	Total appraised value.	Total real-estate value.
Addison .....	428,384	\$16 25	\$6,964,011	\$8,572,323
Bennington.....	375,951	9 38	3,509,642	5,509,961
Caledonia.....	342,858	13 81	4,735,773	7,174,606
Chittenden.....	297,592	20 42	5,825,455	11,226,471
Essex.....	254,835	5 00	1,274,621	1,713,905
Franklin.....	347,477	15 87	5,515,333	7,976,071
Grand Isle.....	48,163	22 79	1,097,555	1,201,272
Lamoille.....	243,374	11 61	2,826,464	3,280,390
Orange.....	389,072	13 73	5,363,078	6,979,389
Orleans.....	309,616	11 72	4,034,743	5,879,162
Rutland.....	524,314	14 33	7,777,936	15,562,026
Washington.....	337,337	14 53	5,626,733	8,747,752
Windham.....	449,192	10 37	4,657,577	8,566,196
Windsor.....	549,376	13 72	6,920,421	10,318,340

Included in the last column is the appraised valuation of first-class real estate, comprising all buildings and property in estates under ten acres.

The footings of the above tabulated statement are as follows: Number of acres in farms exceeding ten acres in the State, 5,037,841; average appraisal per acre for the State, \$18.86; total appraised valuation of such farms in Vermont, \$46,779,445; total appraisal of first and second class real estate in Vermont, \$102,708,419.

To this should be added the following appraised valuation of road-beds of the various railways as reported by the State Board of Listers and arranged by counties: Addison County, \$130,647; Bennington, \$182,309.87; Caledonia, \$82,400; Chittenden, \$122,976.04; Essex, \$81,225; Franklin, \$200,707.74; Grand Isle, \$32,842; Orange, \$165,916; Orleans, \$173,447.50; Rutland, \$309,296; Washington, \$78,190; Windham, \$176,736; Windsor, \$237,828; total, \$1,974,521.15.

A summary of the valuation of the first, second, and third class of real estate in the State, as determined by the State Equalizing Convention (and returned by the State Board of Listers), aggregates \$104,682,940.

PUBLIC INSTITUTIONS.—In 1880 there were

142 convicts in the State-Prison; in 1882 the number was 94.

On the 31st of July, 1880, there were 66 prisoners in the House of Correction and four in the Rutland County Jail, which is in the same building and under the same management. Two years later there were 44 prisoners in the House of Correction and one in the Rutland County Jail, making a difference of 25 in the two years.

On July 31, 1880, there were 122 pupils in the Reform School; on the same day in 1882 there were but 86, a decrease of 36 in two years.

The report of the trustees of the Insane Asylum at Brattleboro shows that the number of the inmates of the asylum August 1, 1882, was 441, of whom 356 were residents of Vermont, an increase of 27 within two years. They say that the institution has become almost exclusively devoted to the State, only three having been admitted from outside its limits in the past two years.

There are in the various institutions at which the beneficiaries of this State are being educated the following numbers, viz.: At the American Asylum for the Deaf and Dumb at Hartford, Conn., 17; at the Clarke Institution for Deaf-Mutes at Northampton, Mass., 4; at the Perkins Institute for the Blind at Boston, Mass., 8; at the Massachusetts School for Idiotic and Feeble-Minded Youth at South Boston, Mass., 3. To aid in supporting these pupils the State has expended during the past two years the following sums, viz.: For the deaf and dumb at the American Asylum, \$5,689.66; for the deaf and dumb at the Clarke Institute, \$1,430.71; for the blind at the Perkins Institute, \$4,850; for the feeble-minded at South Boston, \$2,316.96. The entire appropriation per annum is \$5,000 for the deaf and dumb, \$4,000 for the blind, and \$2,000 for the feeble-minded.

EDUCATION.—The Superintendent of Education, in his report embracing the two years ending March 31, 1882, says that as a whole the common schools are not now accomplishing what the best interests of the people and State demand. Among the many causes for this inefficiency he cites the following: That the number of native-born children has decreased; that the people have gradually gathered around business centers, and that many rural districts are thinly populated; that schools are small, scholars young, real estate depreciated, taxes high, and the tendency of the times is to employ cheap teachers; that school-houses are neglected, and that the work of the district schools is unsatisfactory.

In 1857 there were but four graded schools and seventy academies in the State. Since then the academies have decreased and graded schools increased.

The State Normal School at Castleton reports an aggregate attendance for the year of 396 pupils and 13 graduates; and the Normal

School at Johnson 122 different students, and the aggregate number of graduates since 1867 to be 262. The Randolph Normal School had 187 scholars at the spring term of 1882, and graduated a class of 20 at that term.

The following statistics, taken from the superintendent's report, are interesting:

Number of school districts.....	2,383
Number of common schools.....	2,527
Number of children attending common schools..	74,000
Average daily attendance.....	47,772
Amount of money divided to districts.....	\$119,670 06
Amount of money raised by tax.....	871,851 84
Amount of teachers' wages, including board.....	881,607 83
Amount of all school expenditures.....	476,478 08
Number of male teachers.....	653
Number of female teachers.....	3,723

**THE HUNTINGTON WILL.**—This bequest has already been accepted by the State, and that fact communicated to the court before whom the case was tried.

**POLITICAL.**—The Republican State Convention met in Montpelier on the 21st of June, and nominated the following ticket: For Governor, John L. Barstow, of Shelburne; for Lieutenant-Governor, Samuel E. Pingree, of Hartford; for Treasurer, William H. DuBois, of Randolph. The following are among the resolutions adopted:

*Resolved*, That we deprecate the one-term practice which generally prevails in the election of members of the Legislature, believing that it seriously impairs the efficiency of the legislative branch of the State government; that with a view to the correcting of the evils which result from this practice we earnestly recommend the voters of the State to choose for the offices of Representative and Senator "the persons most noted for wisdom and virtue," and by successive elections retain them in the legislative service so long as they may be compatible with the public good.

*Resolved*, That we recognize the paramount importance of popular education as an element in the highest development of the State, and favor such additional legislation as the condition and wants of the common schools of the State may demand.

*Resolved*, That recognizing the vast importance of our agricultural interests, we believe that they should receive such attention at the hands of our legislators as will give to our State such a thorough, practical, and generous system as shall by its steady and wise application most successfully develop the material prosperity of our Commonwealth.

The Republican candidates for Congress were: John W. Stewart, in the First District, and Luke P. Poland, in the Second. The Democrats nominated George E. Eaton for Governor, G. N. Bullard for Lieutenant-Governor, Willard Gay for Treasurer, and L. W. Redington and George L. Fletcher for Congress. William W. Grout ran as Independent Republican in the Second District. The Greenbackers also made nominations. At the election in September the Republican ticket was chosen, the vote being as follows:

FOR GOVERNOR.	
Whole number of votes cast.....	51,845

The new districts consist of the following counties: First—Addison, Bennington, Chittenden, Franklin, Grand Isle, Lamoille, and Rutland; Second—Caledonia, Essex, Orleans, Orange, Washington, Windsor, and Windham.

The Legislature chosen at this election consists of twenty-eight Republicans and two Democrats in the Senate, and one hundred and eighty-three Republicans, fifty Democrats, one Independent, and two Greenbackers in the House.

On the 7th day of January, John Pierpont, Chief-Justice of the Supreme Court of the State, died at his residence at Vergennes. On the 10th of the same month the Governor appointed Homer E. Royce, who was then First Assistant Judge of the Supreme Court, Chief-Justice, to fill the vacancy occasioned by the death of Judge Pierpont. He then reappointed all of the other Assistant-Judges, advancing each one of them one step, and, to fill the vacancy thus occasioned, appointed John W. Rowell, of Randolph, Sixth Assistant-Judge of the Supreme Court.

**VIRGINIA. STATE GOVERNMENT.**—The following are the State officers: Governor, William E. Cameron, Readjuster; Lieutenant-Governor, John F. Lewis; Secretary of State, William C. Elam; Treasurer, David R. Revelley; Auditor, S. Brown Allen; Second Auditor, Henry H. Dyson; Attorney-General, Frank S. Blair; Superintendent of Public Instruction, Richard R. Farr; Adjutant-General, James McDonald; Commissioner of Agriculture, James M. Blanton; Superintendent of Land-Office, J. W. Brockenborough; Railroad Commissioner, George A. Martin; Judiciary, Court of Appeals: Chief-Justice, Robert A. Richardson;

Judges, T. T. Fauntleroy, Lunsford L. Lewis, Benjamin W. Lacy, and Drury A. Hinton.

LEGISLATURE.—The Legislature, which was in regular session at the beginning of the year, adjourned on the 6th of March. It was convened by the Governor in extra session on the following day, and continued in session until the 22d of April. Among the acts passed are the following:

Amending the law in relation to the correction of erroneous assessments of lands and lots. For the assessment of taxes on persons, property, income, and licenses, and imposing taxes thereon for the support of the government and free schools, and to pay the interest on the public debt. To amend the law in relation to carrying concealed weapons (omits the word "habitually"). To secure to tax-payers in cities and towns the right of public-school education for their children. Prescribing the penalty for non-payment of taxes in cities and towns. To prevent the catching of oysters at night or on Sunday. To authorize the stockholders of the Richmond and West Point Terminal Railway and Warehouse Company to change its name to the Richmond, Danville and Southern Railway Company. To suppress dueling in the Commonwealth of Virginia. To repeal all acts and parts of acts relating to punishment by stripes, and to substitute other forms of punishment therefor. Giving the consent of the State of Virginia for the purchase by the United States of a tract of land at Yorktown for the purpose of the erection thereon by the United States of a monument to commemorate the surrender of Lord Cornwallis and his forces to the allied army commanded by General George Washington in October, 1781. To return to the public free schools a portion of the moneys diverted therefrom. To amend certain sections of an act in relation to the deposit of foreign insurance companies. Giving the consent of this State to the purchase by the United States of two parcels of land in the county of Westmoreland for the purpose of erecting and maintaining a monument to mark the site of the birthplace of George Washington, ceding jurisdiction over the same, and exempting the same from taxation. Directing the Governor to convey to the United States the title of the Commonwealth to certain real estate in Westmoreland County, and ceding jurisdiction over the same to the United States, and exempting the same from taxation. To authorize the Richmond and Danville Railroad Company to discharge its indebtedness to the State.

Among the bills bearing on the public debt passed at this session, was one to which the reporters gave the name of "Coupon-Killer No. 1." It was intended to restrict the receivability of coupons for taxes, and under the plea of protecting the State against spurious and counterfeit coupons required that no coupon should be received by a collecting officer until it had first been tested by court and jury by a

process so expensive, as alleged, as to practically annihilate the receivability feature of said coupons. Subsequently there was an act passed forbidding the writ of *mandamus* in any revenue cases.

Another act was passed supplementary to the preceding, and called "Coupon-Killer No. 2." (For the provisions of the acts, and the decision of the Supreme Court of the United States on their constitutionality, see OBLIGATION OF CONTRACTS.)

Perhaps the most important act of the session was the so-called "Riddleberger bill" or "debt bill," entitled "An act to ascertain and declare Virginia's equitable share of the debt created before and existing at the time of the partition of her territory and resources, and to provide for the issuance of bonds covering the same, and the regular and prompt payment of interest thereon."

The following is the *Readjuster theory* of the bill:

The preamble presents "the true state of the account between the State and her creditors," derived from the Second Auditor's office, and fixes the debt, principal and interest, June 20, 1863—the date at which West Virginia was admitted into the Union—at \$39,095,928.99, of which two thirds (one third being assigned to West Virginia) is \$26,063,952.66, subject to a credit of \$3,662,434.55 of interest paid from January 1, 1861, to July 1, 1863, *exclusively* out of the revenues of this State, and leaving a principal debt of \$22,094,141.96, with interest due to the sum of \$907,376.17—total debt of this Virginia, July 1, 1863, \$22,401,518.03.

Following up the account upon this basis, and giving this State due credit for her redemptions and payments, the statement ascertains the true debt, as of July 1, 1882, at \$16,843,034.17 of principal and \$4,192,342.98 of interest—total, \$21,035,377.15—which includes the Literary Fund. This sum is apportioned to the various outstanding bonds upon the basis of equity—in which each class is treated according to what it has *heretofore received*. Thus, that class which has received most now gets the least, and that which has received the least now gets the most.

Under the scheme the different classes are fundable in the new bonds proposed to be issued, as follows: Consols at 53 per cent of their face, and the past-due and unpaid interest thereon at 100 per cent; 10-40's at 60 per cent, and the past-due and unpaid interest thereon at 100 per cent; peelers at 69 per cent, and the accrued interest thereon at 80 per cent; unfunded bonds at 69 per cent of two thirds of their face, with the unpaid interest thereon at 63; and the equitable share of the State of the bonds of the Literary Fund at 69 per cent, the interest in arrears on such share, \$379,270, to be paid in money.

For all balances of such indebtedness as may constitute the share of West Virginia certificates are to issue, without recourse on this State. The bonds are to issue of the date of July 1, 1882, payable on July 1, 1882, or after July 1, 1900, at the option of the State, and are to bear 3 per cent interest—principal and interest payable in Richmond at the Treasury. The coupons of the coupon-bonds are not tax-receivable, nor are they, or any of the bonds, exempt from taxation.

In 1890, and annually thereafter until all the bonds are paid, 24 per cent of the amount of the bonds outstanding shall be set apart from the revenue and paid into the Treasury to the credit of the Sinking Fund, and to be applied to the redemption or purchase of the bonds. Fiduciaries may exchange State bonds held by them for bonds issued under the act, when so

authorized by any court having jurisdiction. Interest is to be paid as it becomes due out of any money in the Treasury not otherwise appropriated.

The Legislature also adopted the proposed amendment to the Constitution abolishing the poll-tax as a prerequisite to voting, and provided for a popular vote upon it in November.

Much of the session was occupied with the election of judges and other officers, and with measures designed for the benefit of the Readjusters. They early met with opposition within their own ranks, which began with their refusal to re-elect Auditor John E. Massey, who had been one of their most prominent leaders. Four Readjuster Senators adhered to his fortunes, and after his displacement opposed and defeated the Readjuster schemes for congressional reapportionment, for redistricting the State for Circuit Judges, for the passage of election and registration laws, and other party measures.

**STATISTICS.**—The Board of Public Works fixed the tax on the railroads of the State for the year at \$138,454.92.

The Virginia Penitentiary has now within its walls and on public works 977 convicts, an increase of 29 during 1882. During the fiscal year there were received 330 criminals. During the same period 185 were discharged, 33 died, 73 were pardoned, and 19 escaped—1 from the Penitentiary and 18 from public works. The number of prisoners confined for life is 16. The number of prisoners confined for terms ranging from twenty to fifty-four years is 49. The youngest convict is eleven years of age, and the two oldest are seventy-six. Of the convicts, 276 are under twenty-one years of age.

The occupation and distribution of the convicts in the Penitentiary and on public works at the close of the fiscal year were as follow:

Shoemakers .....	400
Tobacco manufacturers.....	99
Coopers.....	44
Cooks, jobbers, specials, Capitol Square hands, laborers, in hospital, disabled, infirm old men, servers, and nurses.....	123
Males on public works:	
Valley Railroad.....	237
Bristol Coal and Iron Railroad.....	26
Danville and New River Railroad.....	23
Landresses.....	10
Seamstresses.....	10
Total .....	977

The average term of the sentences of the convicts is eight years seven months and six days, and their average age is twenty-seven years and twenty-nine days.

The manufacturing industries of Richmond comprise 710 establishments in operation, employing 15,813 hands, with invested capital amounting to \$11,213,680. The sales of the products of these aggregated in 1882 \$28,061,332. Large as these sales are, they fall short of 1881 by \$4,741,424. The loss is chiefly in tobacco, which drops off \$3,029,100, and there is a loss in other branches—of \$403,203 in iron, of \$434,725 in cigars and cigarettes, of \$350,-

000 in pork-packing, and of \$49,281 in flour. In other departments there has been steady growth in the number of operatives employed, capital invested, and in productions.

The following is a comparative statement of the exports of Richmond for the years 1881-1882:

EXPORTS.	1881.	1882.
Tobacco.....	\$79,604	\$259
Flour.....	1,651,084	949,027
Petroleum.....	17,900	39,315
Timber and lumber.....	54,904	44,683
Staves.....	15,212	53,027
Hoops.....	22,593	53,155
Lard.....	6,719	9,745
Coal (bituminous).....	.....	8,222
Wheat.....	65,456	17,256
Cotton goods.....	1,436	3,965
Cotton to England on steamers from West Point.....	.....	1,062,500
Logs.....	.....	574
Hams.....	.....	625
Sundries.....	775	487
Totals .....	\$1,914,813	\$2,237,445

Total number of barrels of flour shipped to Brazil from Richmond during 1882.....	142,237
Total value of same.....	\$949,027
Decrease in shipment of flour to Brazil as compared with 1881—number of barrels.....	81,259
Total number of vessels engaged in the flour-trade with Brazil.....	44
Being a decrease of.....	29

During the year two barks and six steamships cleared from West Point (port of Richmond), carrying an aggregate of 50,288 barrels of flour to Brazil.

**CROPS.**—The peanut-crop is an important one in many of the counties of Tidewater Virginia, south of James River, and is attended with considerable profit. Virginia raises more than any other State—the crop being worth at least \$500,000 (estimate of 1879)—then North Carolina, then Tennessee—these being the only States which raise them for market. Lime or marl is indispensable to the successful cultivation of this crop. The sweet-potato crop is another important one in Tidewater Virginia. The cultivation of this usually goes hand in hand with that of melons, the same kind of soil suiting each. Irish potatoes are not raised extensively in the State for market. They succeed admirably about the foot of the mountains and on the mountains, and do well in all the cooler sections of the State. In Tidewater Virginia they can be raised early for market, and are shipped considerably from the vicinity of Norfolk. There is one root-crop which has been neglected, and which it is thought would succeed well on all the light, good land in the State, viz., artichokes. They are very productive on light, loamy lands near the streams, but are productive on all rich land of almost any kind.

Grape-culture and wine-making have assumed encouraging proportions in Virginia, and are on the increase, particularly in Piedmont Virginia, in Albemarle, Nelson, Prince William, Warren (in the Valley), etc. A very considerable quantity of wine has been made by different parties of excellent quality, though the business is yet

in its infancy, only commenced a few years since, and in many instances not followed up with intelligence and energy.

Fruits are not generally profitable in the State, except apples in Piedmont and in the Valley.

Cotton is taking hold and extending itself farther north in the counties south of James River, in Tidewater. It is probable that the people of this section can make more money from this crop than from any other crop, if they will take care to avoid the error that many planters have committed, of not raising corn enough to serve them, and of cultivating too much land in cotton not well fertilized and not well cultivated. The cotton raised in Virginia is found to be of excellent quality, and there seems every inducement to continue and to extend this industry.

**POLITICAL.**—In July Mr. Massey announced himself as a candidate for Congressman-at-large, in opposition to Senator Mahone and the Readjusters, in a letter in which his position is thus defined:

For several years past, the settlement of the State debt, and other questions incidental to it, have absorbed so much of the attention of the people of Virginia, that they have given comparatively little attention to Federal affairs. These were not *political* questions. The most stalwart Democrats and the most stalwart Republicans divided and took directly opposite positions upon them. The men of each side were, no doubt, equally honest—each acting in accordance with his honest convictions of right. Neither Democrats nor Republicans were less Democrats or less Republicans because of their being either Readjusters or Funders.

The leaders of both the Readjuster party and the Funder party were Democrats; and each appealed to Republicans to co-operate with them in the settlement of the State debt and other questions of State policy, assuring them that by doing so they in nowise sacrificed their political affiliations or principles.

These questions, upon which both political parties were divided, are now settled, so far as legislation can settle them.

Thus, the questions which separated men of the same political party from, and arrayed them against, each other having been settled, no partition-wall or dividing line stands between them.

I need scarcely inform you, my fellow-citizens, that I first formulated and enunciated the principles of readjustment, and that I have stood firmly and unswervingly by those principles at all times, in all places, and under all circumstances, from an honest conviction of right and duty. These facts are well known to all.

I was, however, a Virginian and a Democrat before the question of readjustment ever arose, and my advocacy of readjustment never lessened my devotion to my State or changed my political principles.

When Senator Hill and others criticised so severely what they supposed would be the course of General Mahone in the Senate of the United States, before he had given a vote, I disapproved their course and censured them for it.

And when General Mahone repelled these attacks, declared he was a "better Democrat" than his assailants, and asserted his independence of caucus dictation, I applauded him for it.

I did not suppose it possible that he who had always boasted of his Democracy, and who had but a short time before sworn that the vote of Virginia should "never be cast for Garfield," had even then formed an alliance with the Republican party, and

would soon after be devising a plan for handing the whole State over to Arthur in exchange for the Federal patronage in Virginia.

Under the banner of liberalism and opposition to rings and cliques, he has inaugurated the most autocratic rule; displaying more intolerance of other men's rights of thought, speech, and action, and required more servile submission to his will and authority, than was ever before witnessed among any free people. Under the popular cry of equal rights for all the people, and opposition to monopolies, he so shaped legislation that, but for the sagacity, the patriotism, the honesty, and the independence of the noble "Big Four," equal rights would now be but an empty name, and the very term a mockery; and the aggregate power of all monopolies concentrated in his hands—a bit in each man's mouth, while he held the reins and the whip.

The four Senators, A. M. Lybrook, B. F. Williams, P. G. Hale, and S. H. Newberry, in an address to the people of the State, explained their course as follows:

We, the undersigned, members of the Virginia Senate, and of what was *once* the Readjuster party, claim that we discharged our whole duty, so far as we were permitted so to do, in the settlement of the public debt, in compliance with our pledges to our respective constituencies. Having done this, the main object of our trust was accomplished.

But we soon learned, from the acts of the caucus and the leaders of the party, that an honest settlement of the State debt upon the terms and according to our repeated promises to the people was not the real object of the self-constituted leaders of the party, but that the result of the November election was to be used to establish a dishonorable spoils system unknown in the political history of this State; that every right of the people was to be prostituted to the success of a dangerous centralized power in the hands of one man and his chosen friends; that to accomplish this purpose the courts were to be deprived of their co-ordinate authority, and made subservient to a central Executive and partisan Legislature; the common schools were to be converted into political agencies; the right of the people to elect their own officers was in a measure to be taken from them, and other heretofore unknown and dangerous measures were to be inaugurated. To accomplish these purposes, a degrading and tyrannical caucus system was enforced by rules degrading to those who were forced by the party lash to adopt it—insulting to their manhood, and a betrayal of the public trust confided to them by the people. The ultimate object of all this was to get control of the whole political power of the State, and hand it over to the daring leader of the party, to be utilized by him to advance his ambitious personal schemes; and it was all to be done quickly, and before the people could be warned of the danger. They, through their faithless representatives, were to be converted into a new political party, with new principles and doctrines, all for the special benefit of the leader and his friends. We, foreseeing the tendency of these measures, alarmed at the impending danger—refusing all offers of place or profit as the price of a betrayal of the trust confided in us—conscious of the rectitude of our motives—determined to use every effort to thwart these measures.

An address was issued by the other Readjuster members of the Legislature and the State officers, which denounced the four Senators as unfaithful to the pledges implied in their election, and claimed that the measures sought to be passed were proper and beneficial. Massey received the support of the Democrats, whose State Committee declared in his favor. The straightout Republicans placed in

nomination the Rev. John M. Dawson, colored.

The Readjuster candidate was John S. Wise. The Readjusters pronounced in favor of supporting the Administration of President Arthur. The candidates for district Congressmen were as follow :

DISTRICT.	Readjuster.	Democratic.
1.....	Robert M. Mayo.....	George T. Garrison.
2.....	Harry Libbey.....	R. C. Marshall.
3.....	John Ambler Smith.....	George D. Wise.
4.....	Benjamin S. Hooper.....	W. A. Reese.
5.....	William E. Sims.....	George C. Cabell.
6.....	J. Henry Rives.....	J. Randolph Tucker.
7.....	John Paul.....	Charles T. O'Ferrall.
8.....	Richard R. Farr.....	John S. Barbour.
9.....	Henry Bowen.....	S. H. Newberry.

In the Second District J. F. Dezendorf ran as a straightout Republican; and in the Ninth, Abram Fulkerson as an Independent Readjuster. Mr. Newberry ran as a Democrat, but without a regular nomination.

ELECTION RETURNS.—The election resulted in the choice of six Readjuster and four Democratic Congressmen, Readjusters being returned at large, and from the First, Second, Fourth,

Seventh and Ninth Districts; and Democrats from the Third, Fifth, Sixth, and Eighth Districts. The vote was as follows, excluding scattering :

	Readjuster.	Democratic.	
At large.....	99,992	94,184	4,842 (Dawson).
District 1.....	10,505	10,594	
" 2.....	13,226	10,282	8,114 (Dezendorf).
" 3.....	8,060	10,736	
" 4.....	14,764	4,552	
" 5.....	11,489	12,948	
" 6.....	10,862	12,765	
" 7.....	12,146	11,941	
" 8.....	9,084	14,256	
" 9.....	10,078	1,467	5,608 (Fulkerson).

In the First District, Gloucester County, and a precinct of Northampton County, which gave Garrison 71 majority, were thrown out for irregularities. Chesterfield County, in the Third District, giving 38 Readjuster majority, was also thrown out, but this did not affect the result. The vote on the constitutional amendment, abolishing the poll-tax as a prerequisite to voting, was 107,303 for, and 66,131 against; majority for the abolition, 41,172.

## W

WAITE, MORRISON REMICK, lawyer, and the present Chief-Justice of the Supreme Court of the United States, was born in Lyme, Conn., November 29, 1816. His ancestors came from England in early colonial times, and settled in Massachusetts, but removed to Lyme about the year 1677. One of the earliest, whose name has been preserved, was Thomas Waite, whose son Marvin was on the first electoral ticket of Connecticut, after the Revolution, and served nineteen terms in the General Assembly, and as Judge of the County Court for several years. Remick Waite, who married Susannah Matson, was a half-brother of Judge Marvin Waite. The eldest son of Remick, Henry Matson, was born in Lyme, February 9, 1787; graduated at Yale College in 1809. A lawyer of learning and ability, he was successively elected to both the lower and higher branches of the State Legislature. In 1834 he was chosen an Associate Justice of the Supreme Court of Connecticut, and in 1854 was appointed Chief Justice of that court, which office he held till he reached the age of seventy years, the limit prescribed by the State Constitution. In 1816 he married a daughter of Colonel Richard Selden, of Lyme, and grand-daughter of Colonel Samuel Selden, an officer of the Revolutionary Army.

Morrison R. Waite is the oldest of the eight children of Chief-Justice Henry Matson and Maria Selden Waite. He entered Yale College at the age of seventeen years, and graduated, with honor, in the class of 1837, with William M. Evarts, Edwards Pierrepont, and Professor

Benjamin Silliman, Jr. After graduating he began the study of law in his father's office, in Lyme. In October, 1838, he went to Ohio, and continued his studies in the office of Samuel M. Young, then a prominent attorney of Maumee City. On his admission to the bar in 1839 he formed a partnership with Mr. Young. In 1849 he was elected to represent the Maumee District in the Ohio Legislature. After the expiration of his term, in 1850, his firm opened an office in Toledo, of which Mr. Waite took charge, and was soon acknowledged as a leading counselor and advocate in Northwestern Ohio. One, who often met him as opposing counsel, said that "his assertion on any question of law was always accepted as indisputable." In 1852 Mr. Young removed to Toledo, and the firm of Young & Waite continued until Mr. Waite's youngest brother, Richard, came to the bar, when the brothers entered into a partnership, which lasted till the senior partner's elevation to the chief-justiceship.

Politically a Whig, until the disbandment of that party, since that time he has been a Republican. An active and influential member of his party, he never became recognized as a party leader, the conservative tendency of his mind leading him in opposition to radical political measures. This was shown during the war, in his support of the policy of President Lincoln, rather than the more summary measures advocated by some of the anti-slavery leaders. But to all the war measures of the Government he gave earnest and effective sup-

port, making himself especially useful in aiding the recruiting service of the army.

In 1862 he ran as an Independent Republican, in the Tenth Congressional District of Ohio; the call for the convention which nominated him being signed by Republicans and Democrats, who pledged themselves to "the maintenance of the Government and the determined prosecution of the war; to the putting down of the rebellion, and the restoration of the Union." The regular Republican Convention nominated James M. Ashley, and adopted a radical anti-slavery platform, demanding the confiscation of the property of leading rebels, and other extreme measures. Edwin Phelps was brought out as the regular Democratic candidate. Ashley was elected by a plurality of 1,127 votes, although in an actual minority of 4,105. A seat upon the bench of the Supreme Court of Ohio was tendered to Mr. Waite by Governor Brough, but he declined it.

His national reputation dates from his selection by President Grant, in November, 1871, as one of the three counsel to represent the United States before the Tribunal of Arbitration, at Geneva, Switzerland, his associates being William M. Evarts and Caleb Cushing. This appointment came to him unsought, he not even being aware that such a position was to be filled. He was in New York, closing up an important case, when the dispatch from the Secretary of State advising him of his appointment by the President reached him, being forwarded to him from Toledo. He immediately accepted this appointment, and left for his post of duty at Geneva early in the following month of December, where he performed the required service to the entire satisfaction of the Government and the country.

His already good reputation as an indefatigable and learned lawyer was greatly enhanced by the ability which characterized his labors in behalf of his country in this historical tribunal. His argument on the liability of the English Government for permitting the Confederate steamers to take supplies of coal in its ports, was regarded as an effort displaying great logical power and comprehensive grasp of international questions. On September 17, 1872, the arbitrators rendered their decision that Great Britain had failed in her duties as a neutral, in the cases of the Alabama, Florida, Shenandoah, and their tenders, and awarded to the United States the sum of \$15,500,000 in gold, which was promptly paid. He returned from Geneva in November, 1872, and resumed the practice of his profession in Toledo. In the same year the honorary degree of LL. D. was conferred upon him by his Alma Mater. In January of the year 1873, he was, on the motion of Caleb Cushing, admitted to practice in the United States Supreme Court. In the following April he was nominated by both political parties and unanimously elected a delegate to the Convention called to form a new Constitution for the State of Ohio, and

upon its assembling, in May, he was chosen its president.

The death of Chief-Justice Chase occurred May 7, 1873, creating a vacancy in the highest judicial office in the United States. After Attorney-General George H. Williams and Caleb Cushing had been successively nominated for this position and withdrawn, the President sent to the Senate the name of Morrison R. Waite, January 20, 1874. This appointment was also unsolicited by him; the Constitutional Convention over which he was presiding being then in session, a member advancing to offer congratulations found him ignorant of the fact of his nomination. His appointment was received with approval throughout the country, being alike acceptable to the Senate, the bar, and the people generally, irrespective of parties. He was confirmed as Chief-Justice of the United States by a vote which has seldom been equalled in its favorable character. The nomination was discussed about an hour, during which speeches were made by Senators Edmunds, Thurman, Sherman, and Sumner, whose speech was considered one of the most impressive he ever delivered in the Senate. Mr. Sherman spoke of Mr. Waite's high standing at home, saying, "Not a breath of suspicion or reproach had ever been cast upon him," and that he believed "not a man existed whose character was more spotless, or whose sense of justice and honor was more acute." Not a word was said in opposition to the nominee, and the vote, taken by yeas and nays, resulted in a unanimous confirmation by the Senate. Chief-Justice Waite took the oath of office March 4, 1874, and immediately entered upon the duties of his high position. An Associate Justice of the Supreme Bench, now retired, says of him: "From the day of his entrance into office as Chief-Justice of the Supreme Court, he has been indefatigable in the discharge of its great duties, patient, industrious, and able. His administrative ability is remarkable. None of his predecessors more steadily and wisely superintended the court, or more carefully observed all that is necessary to its working. Nothing under his administration has been neglected or overlooked. He has written many of the most important decisions of the court, too many to be particularized. Among the more recent of his opinions may be mentioned those delivered in the cases of *Antoni vs. Greenhow*, *Louisiana vs. Jumel*, and *Elliott vs. Wiltz*, each of them involving questions arising under the Constitution of the United States." The decision of the Chief-Justice in the Louisiana bond case will be found under the title *OBLIGATION OF CONTRACTS* on pages 653 and 654 of this volume.

Judge Waite was married September 21, 1840, to Amelia C. Warner, of Lyme, Conn. They have been for many years active members of the Protestant Episcopal Church, he having been frequently elected a delegate to her general conventions.

WEED, THURLOW, a widely-known American journalist and political leader, died at his residence in New York city, November 22, 1882, in his eighty-fifth year. He was born at Cairo, Greene County, N. Y., November 15, 1798. His father was a cartman in very poor circumstances, and he had therefore, in his early life, abundant experience of the struggles and hardships of poverty. His first occupation was as a blower and striker in a blacksmith-shop in Catskill, where his parents were then residing, and he was afterward for a short time cabin-boy and cook on river-sloops. His early ambition was to be connected with the printing business; and while living at Catskill he managed to pick up some little information about his desired calling, doing chores in the office of the "Recorder" of that place. It was not, however, until his fourteenth year, that he was enabled to carry out his desire of becoming a printer. From this time for a number of years he found employment as a compositor in different parts of the State. In 1815 he came to New York, where he was for a time employed in the printing-office of Van Winkle & Wiley, who published Cobbett's "Weekly Register," with the eccentric editor of which journal he became acquainted by carrying proof-sheets to him.

In 1819 he established at Norwich, Chenango County, a paper called "The Agriculturist," but after two years he removed to Manlius, where he started the "Onondaga County Republican." A year later, in 1822, he moved to Rochester, and entered the employ of the late Everard Peck. In 1824 the "Advertiser"—the first daily paper west of Albany—was started at Rochester, and shortly afterward the "Telegraph," of which Mr. Weed became owner and editor, was established in the same place. It was while occupied in editing this journal, that Lafayette visited the United States, and Mr. Weed accompanied him as a correspondent in his tour throughout the State. In 1826 the Anti-Masonic excitement arose, due to the abduction and alleged murder of William Morgan, who had published a book purporting to reveal the secrets of Masonry. Difficulties arising out of an editorial comment on this affair, which displeased many of the subscribers of the "Telegraph," induced Mr. Weed to withdraw from this journal, and to found shortly afterward the "Anti-Masonic Enquirer," which at once met with public favor, and gave its editor a leading place in party councils. On the Anti-Masonic issue Mr. Weed was twice elected to the Legislature, being in the Assembly at the same time that Mr. Seward was in the Senate.

His ability as a party manager recommended him to the leading men in political accord with him as the proper man to contend at Albany with what was known as the "Regency," whose political organ was the "Argus." Accordingly, in 1830 Mr. Weed established in that city the "Albany Evening Journal," which took a conspicuous part in the formation of the Whig, as

it afterward did in that of the Republican, party. During the thirty-five years in which he continued to manage it, it held a prominent and influential position in party journalism, and brought Mr. Weed into close and intimate relations with all of the leading men in political agreement with him, as well as with many with whom he was at times in political contention.

Mr. Weed's record as a political worker and party leader runs back to the very beginning of his journalistic career. The first political campaign in which he took a prominent part was the presidential conflict of 1824, which resulted in the election of John Quincy Adams. He succeeded in uniting the Adams and Clay factions, and was acknowledged by the prominent men of his party to have contributed more than any one else to the party's success in this campaign. He took a prominent part in the nomination of Harrison in 1836 and 1840, and of Clay in 1844, and was active in behalf of General Scott in 1852 and Fremont in 1856. In 1860 Mr. Seward was his choice, and he labored strenuously for his nomination; but, failing in this, he cordially supported Mr. Lincoln, whose re-election he heartily advocated in 1864. He supported the nomination of General Grant, and also his renomination in 1872. In the nominations for prominent positions in his own State, Mr. Weed's advice and influence were important elements. He advocated and worked for the nomination and election of Governors Seward, Fish, King, Hunt, Morgan, and Dix, whose administrations have been among the most successful of those in the history of the State.

Mr. Weed visited Europe several times, corresponding during his earlier trips with the "Albany Evening Journal." His first visit was made in 1843, the second in the latter part of 1851, and the third in 1861. The visit of the last year was one of national importance, as his mission was to place the struggle in which the North was then engaged in a favorable light before Europe, and ask the European governments to refrain from any intervention on behalf of the South. He was accompanied by Archbishop Hughes and Bishop Mellvaine. The letters written by Mr. Weed while on these visits, as well as a series written on a visit to the West Indies in 1844-'45, were collected and issued in a volume in 1866.

In 1867 Mr. Weed became the editor of the "Commercial Advertiser," in New York city, which position he was, however, compelled to give up in a little over a year on account of failing health. This was somewhat improved by a European trip in the summer of 1868, but not sufficiently to warrant him in undertaking regular and prolonged work. The winter of 1868-'69 was spent in South Carolina, and from then until his death, with the exception of several intervals of travel, he spent his time in New York, contributing occasionally to the periodicals, mainly "The Galaxy," and also

occupying himself in the preparation of his autobiography, which he left unfinished.

Mr. Weed was married in 1818 to Miss Catherine Ostrander, of Cooperstown, who died in 1858. He had four children—three daughters, two of whom are married, and a son, who died in 1851, at the age of thirty-one. He had also an adopted daughter, who died in 1855.

**WEST VIRGINIA.** The Governor of this State during the year was Jacob B. Jackson.

**ELECTIONS.**—The election in November was for the choice of four members of Congress, a Judge of the Supreme Court, and members of the State Legislature. Of the members of Congress, the Democrats elected three and the Republicans one. For Supreme Judge, Adam C. Snyder was elected by a majority of 3,221, in a total vote of 90,101. To the Senate of the Legislature eight Republicans and seventeen Democrats were elected; to the House, twenty-seven Republicans and thirty-eight Democrats.

**FINANCES.**—A summary of the fiscal year ending September 30, 1882, shows the following results:

Balance in Treasury, October 1, 1881 .....	\$256,800 52
Receipts from all sources during the year.....	842,563 53

Making a total of.....	\$1,098,864 85
The disbursements during the year ending September 30, 1882.....	797,612 06

Leaving a balance at the end of the year 1882 of.....	\$301,252 29
---	--------------

The balance in the general Treasury is made up of the following funds:

State fund in Treasury October 1, 1882.....	\$13,698 32
The general school fund.....	252,760 84
The school fund.....	84,798 63

Total.....	\$301,252 29
------------	--------------

By the census of 1879 the population of the State was 442,014. In 1880 it increased to 618,443, an increase of nearly 40 per cent, yet the assessed value of the personal property in the State in 1871 was greater than in 1881 by more than \$3,000,000, and the assessed value of the land in 1881 was greater than in 1871 by about \$10,000,000—showing a net gain in real and personal property of about \$7,000,000, on \$136,000,000, or a little over 5 per cent in ten years.

These figures would seem to indicate that the large immigration to this State in the last ten years had added nothing to the wealth in personal prosperity.

This can not be true. The last census testifies to the large number of farms that have been opened and to the large increase of agricultural productions. In the mining districts there is also a large increase of production. Railroads have been built affording means of transportation to market—not only of minerals, but also of timber, which heretofore has been valueless. The subjects of taxation and their values to-day are greater than in any former years.

While the population has been increasing, the necessary expenses of government have

also increased. In 1871 the appropriation for criminal charges was \$24,000; in 1881 it was \$55,000.

In 1871 the appropriation for the insane was \$31,000; in 1881 there was appropriated for like purposes \$83,000. Other subjects of charge upon the general Treasury have increased in like proportion.

**STATE INSTITUTIONS.**—The number in the Insane Hospital during the year was 642. There were discharged during the year:

	Males.	Females.
Cured (white).....	30	25
Cured (colored).....	20	1
On bond (white).....	20	15
Died (white).....	29	25
Died (colored).....	8	8
Escaped.....	2	
Highest number during the year.....	642	
Lowest number during the year.....	581	
Cost per capita per week.....	\$2 13½	

The number in the Deaf and Dumb and Blind Asylum on October 1, 1881, was as follows:

Deaf-mutes.....	87
Blind.....	88

Total.....	120
In attendance during year, deaf-mutes.....	89
In attendance during year, blind.....	86

Total.....	125
Discharged, deaf-mutes.....	10
Discharged, blind.....	4

Total.....	14
Present at end of term, June, 1882, deaf-mutes.....	82
Present at end of term, June, 1882, blind.....	80

Total.....	112
Number of prisoners in the Penitentiary October 1, 1881.....	201
Received during the year.....	79
In prison during the year.....	208
Discharged during the year, expiration of term.....	78
Pardoned by the President and Governor.....	15
Sent to Insane Asylum.....	1
Died.....	1
In prison October 1, 1882.....	185

The board estimate the current expenses for the year ending September 30, 1883, as follow:

For subsistence, clothing, medical attendance, guards, etc., for year ending September 30, 1883, 200 prisoners at 46 1-10 per capita per day.....	\$83,650 00
Less earnings as follows, viz:	

From contractors for convict labor.....	\$19,500 00
From rents.....	150 00
From visitors.....	200 00
From boarding Federal prisoners.....	780 00
	\$20,680 00

Deficiency.....	\$18,070 00
-----------------	-------------

The summary of the schools is as follows:

Number of children enrolled for year 1882, between six and twelve years of age.....	216,598
Number of children enrolled between same ages for 1881.....	218,191

Increase for the year.....	8,407
Average daily attendance for the year.....	96,652

Increase over previous year.....	5,386
Total receipts from all sources for the teachers' and building fund, including balance on hand during the year.....	\$988,620 08

Increase over previous year.....	\$73,160 11
Total expenditures for all purposes during the year.....	\$865,878 41

Increase over previous year.....	\$106,358 16
----------------------------------	--------------

The law establishing the State Board of Health and regulating the practice of medicine and surgery, as amended and re-enacted, has

proved a wise act of legislation. It is admirably adapted to secure the protection of the lives, health, prosperity, and happiness of all classes of the people.

The number of registered physicians and surgeons to date of report is 1,041. Of these 958 are residents of the State, and the residue residents of adjoining States.

Besides the careful protection of the interests of the life and health of the inhabitants of the State, the board is charged with the duty of investigating the causes of diseases occurring among the domestic animals. The value of this provision of the law was witnessed in Brooke County, when what is known as the Southern cattle-fever made its appearance on several farms in that county. The prompt action of the State and county boards arrested the spread of the disease, and probably saved large sums of money to farmers of that locality, in the preservation of their stock from infection.

**LAND-TITLES.**—With regard to the West Virginia land-titles, and the various frauds practiced to induce unsuspecting persons to purchase land, Governor Jackson makes the following statement: "Complaints are frequently made to this department, of frauds being practiced upon persons, desiring to purchase lands in this State, by unscrupulous persons offering for sale in the Eastern cities lands, the title to which has been forfeited, sold as delinquent for taxes, or held under junior titles." He states also that "descriptions, abstracts, plates, seals, etc., etc.," relating to above a million of acres as located in eleven specified counties, and offered for sale "at ten cents per acre," have actually been manufactured in an Eastern city. In order to remedy, at least in part, the evil resulting from these frauds, which can not but most injuriously affect the reputation and material interests of West Virginia, the Governor suggests that all clerks who have to do with land-titles "should be inhibited from certifying the title to forfeited and delinquent lands, or giving abstracts of such titles, except where the same are to be filed as evidence in some pending suit."

Criminal life-insurance companies, familiarly known as "Graveyard" and "Death-Rattle" companies, because they take on themselves unusual risks, and thereby induce the policy-holder to attempts against the insured person's life, having been organized and chartered to transact business in neighboring States, Governor Jackson warns the Legislature to effectually prevent such companies, or their agents, from being admitted to do business in the State.

**LEGISLATION.**—The special session of the Legislature commenced on January 11th, and closed at the end of March. Within that time about two hundred and thirty acts were passed, of which almost all are of a local character. Among them were the following:

"An act making an appropriation for the

purpose of paying the costs of establishing and maintaining a quarantine by the Board of Health"; "An act apportioning representation in the Senate and House of Delegates of this State"; "An act for districting the State for Representatives in the Congress of the United States"; "An act fixing the maximum retail price of certain school-books in use in the schools of this State."

Near to the close of this session, the following communication was addressed to the Legislature, containing a resolution, adopted by the Land League of the city of Wheeling, at their meeting on March 19th:

*To the Honorable the Members of the Legislature of West Virginia.*

GENTLEMEN: The undersigned citizens of the city of Wheeling beg leave to state that, at a meeting of the Land League of said city, held on Sunday, March 19th, they were appointed a committee to lay before you the following resolution passed at that meeting:

*Resolved*, That the Legislature of this State, now in session, is respectfully requested to use its influence to secure for American citizens now confined in prisons in Ireland, by authority of the English Government, contrary to the spirit of public law, all the rights which, as American citizens, they are justly entitled to.

We have the honor to be, gentlemen, your obedient servants.

It was presented on March 26th to the Senate by one of its members, who at the same time offered for adoption the following joint resolution, which was passed by a unanimous vote:

*Resolved by the Legislature of West Virginia*, That the members of the Senate and House of Representatives representing this State in the Congress of the United States be and they are hereby respectfully requested to use such means and influence as may be in their power to secure the intervention of the Government of the United States for the release and protection of American citizens, confined in prison by authority of the Government of Great Britain.

**WISCONSIN. STATE GOVERNMENT.**—The State officers during the year were as follows: Governor, Jeremiah M. Rusk, Republican; Lieutenant-Governor, Samuel S. Fifield; Secretary of State, Ernst G. Timme; Treasurer, E. C. McFetridge; Attorney-General, Leander F. Frisby; Adjutant-General, C. P. Chapinan; Superintendent of Public Schools, Robert Graham; Insurance Commissioner, P. L. Spooner, Jr.; Railroad Commissioner, Nils P. Hangen. Judiciary, Supreme Court: Chief-Justice, Orsamus Cole; Associate-Justices, William P. Lyon, Harlow S. Orton, David Taylor, and John B. Cassoday.

**LEGISLATURE.**—The Legislature convened on the second Wednesday of January, and adjourned on the 31st of March, after a session of eighty days. The average for the past thirteen years has been sixty-seven.

There were introduced in the Senate 444 bills, of which 130 became laws; 32 joint resolutions were also introduced in this body; 28 resolutions; 6 memorials to Congress, and 51 memorials and petitions. In the Assembly, 484 bills were introduced, 200 of them became

laws; 33 joint resolutions; 61 resolutions; 438 memorials and petitions, and 5 memorials to Congress.

The important measures passed at this session may be briefly summarized as follow:

Six new cities were incorporated, as follow: Baraboo, Port Washington, Monroe, Menomonie, Stoughton, and Neillsville.

The Insurance Commissioner was given discretionary power in the issuance of licenses exempting co-operative life companies from the provisions of the general insurance laws of the State; heretofore, a special act of the Legislature was required. Another act passed, provides for the revocation by the Commissioner of the license of any company which advertises to do a different class of business from what it really does.

Continuous lines of railway, of which it is desired to make through trunk-lines, are permitted to consolidate for that purpose. The St. Croix land grant was transferred from the Chicago, Portage and Superior Railway Company to the St. Paul and Omaha line, the latter agreeing to pay \$75,000 toward meeting the claims of laborers on the former line, and also to pay all expenses in the matter of settlement.

A bill was passed providing that the State militia shall hold annual encampments, camp-equipage to be purchased by the State, and the men to be paid one dollar a day in camp for rations; the State is to furnish transportation to and from encampments; armories owned by companies are exempted from taxation; battalions are to consist of from three to eight companies, and regiments of eight or more; the maximum number of men to be taken into camp is seventy-five for each company; the uniform fund is made payable on inspection returns, instead of on encampment returns. The number of authorized companies in the State was increased from thirty to thirty-five.

Some changes were made in the school code. The time for annual school-meetings in towns was fixed for the first Monday in June, the present time being elective and irregular. The compulsory education law was amended so as to have school-boards sit and receive reports of attendance and truancy from the parents, instead of going around and hunting up the facts, as now. The benefits of the free high-school act were extended for five years more, they having now been in operation for five years past.

The seduction of females under sixteen years of age was made a penitentiary offense, with maximum imprisonment fixed at twenty years. The sale or use of toy-pistols and toy fire-arms generally was prohibited. So also was the importation into the State, of diseased swine and sheep. Severe punishment is fixed for the criminal abuse of children, by parents or guardians; also for the abandonment of children by their father.

The sale of trout from the State fish-hatcheries is prohibited. Any person who has had an uninterrupted practice within this State for twenty years, as a physician or surgeon, is authorized to serve without a diploma. Stringent regulations were adopted regarding the practice of pharmacy. The earnings of married laborers are exempt from execution for ninety days preceding the filing of suit, or, in lieu thereof, \$500 worth of property. Logs, lumber, and telegraph-poles belonging to non-residents, are hereafter to be taxed. Telegraph companies are to be taxed as follows: One dollar per mile for the first wire, fifty cents for the second, twenty-five for the third, and twenty for the fourth.

A proposed constitutional amendment, relative to the registry of voters, intended to meet the objections of the Supreme Court to the old law, was agreed to, and will be put to the popular vote next fall.

It was decided that the first biennial session shall be held on the second Wednesday of January, 1889.

Congress was memorialized to improve the Mississippi and its tributaries; to build a harbor of refuge on the east shore of Lake Pepin; to improve the Sturgeon Bay Ship-Canal; to adopt Pendleton's Civil-Service Reform Bill; to suppress polygamy, and to settle the claims of this State for certain tracts of swamp and overflowed lands.

A State tax of half a million dollars was ordered to be levied for the year.

Acts were also passed reapportioning the State for legislative purposes and for the election of Congressmen, and organizing Price County for judicial purposes. The following is the Congressional Apportionment Act:

First District, the counties of Jefferson, Kenosha, Racine, Rock, and Walworth.

Second District, the counties of Dodge, Fond du Lac, Washington, and Waukesha.

Third District, the counties of Dane, Grant, Green, Iowa, and Lafayette.

Fourth District, the county of Milwaukee.

Fifth District, the counties of Brown, Calumet, Kewaunee, Manitowoc, Ozaukee, and Sheboygan.

Sixth District, the counties of Adams, Columbia, Green Lake, Marquette, Outagamie, Waushara, and Winnebago.

Seventh District, the counties of Crawford, Juneau, La Crosse, Richland, Sauk, Vernon, and Monroe.

Eighth District, the counties of Bayfield, Barron, Buffalo, Burnett, Clark, Douglas, Dunn, Eau Claire, Jackson, Pepin, Pierce, Polk, St. Croix, and Trempealeau.

Ninth District, the counties of Ashland, Chippewa, Door, Florence, Langlade, Lincoln, Marathon, Marinette, Oconto, Price, Portage, Shawano, Taylor, Waupaca, and Wood.

The aggregate of appropriations made at this session was \$675,254.44.

The direct appropriations in 1881 were \$282,081.38; in 1880, they amounted to \$418,953.05; in 1879, to \$299,177.77; and at the regular session of 1878, to about \$339,000.

The causes for the unusually large appropriation this year are several. The principal of

these is the enlargement of the Capitol, which alone calls for \$200,000; the deficiency in the State institutions and the appropriation for the Industrial School for Girls are also important items which bring up the aggregate.

**FINANCES.**—The financial condition of the State is very satisfactory. The cash in the Treasury on the 30th day of September, 1881, belonging to the general fund, was \$287,953.32; the receipts of this fund for the fiscal year were \$1,263,074.90, and the disbursements were \$1,186,807.54, and the cash in the Treasury, September 30, 1882, was \$364,220.68.

The receipts of the trust funds during the fiscal year were \$1,060,954.31; the cash in the Treasury, September 30, 1881, was \$548,346.88; the disbursements from the trust funds during the fiscal year were \$1,446,888.21, and the cash in the Treasury on the 30th day of September, 1882, was \$162,412.98.

The receipts during the year for the school fund are given at \$326,159.60, of which amount \$130,000 was for United States bonds which had been called in during the year. The disbursements from this fund are reported at \$470,961.12, all of which, except the sum of \$337.62 refunded for overpayments, is invested according to law in interest-bearing securities. The total amount of school fund now at interest is \$2,805,278.23, and the cash balance belonging to the fund is \$7,767.95. The school-fund income during the year amounted to \$197,333.30, of which amount the sum of \$185,166.42 was apportioned to the different counties for school purposes.

There was paid during the year the sum of \$24,483.81 to the University fund, nearly all of which was in payment of interest-bearing securities falling due; and there was invested of this fund during the year, in United States bonds, the sum of \$52,862.50. At the end of the fiscal year there was of this fund \$228,438.83, all of which was at interest save \$2,966.39 cash on hand.

The Agricultural College fund, which now inures to the benefit of the university, amounted, on the 30th day of September, 1882, to \$279,689.84, of which \$274,385.37 was bearing interest.

The Normal-School fund, on the 30th day of September, 1882, amounted to \$1,165,041.20, all of which save \$17,969.62 was invested in interest-bearing securities. The income from the fund during the year was \$85,594.98, all of which was disbursed for the benefit of the normal schools.

The receipts of the drainage fund for the year were \$85,012.93, almost entirely derived from the sale of lands, and the disbursements were \$48,542.59.

The receipts of the year ending September 30th aggregated \$2,324,029.21, and the disbursements, \$2,633,695.75 — a deficiency of \$309,666.54. But there was a balance in the Treasury, September 30, 1881, of \$836,300.20, covering the present deficit, and leaving a bal-

ance in the Treasury, September 30, 1882, of \$526,633.26. The Secretary of State estimates that the expenditures during the years beginning January 1, 1884, and January 1, 1885, will be \$1,041,720.88, and the revenues, \$941,720.88.

The bonded debt of the State, created in 1861-'63, has now all been paid or converted into certificates of indebtedness to the trust funds, except \$2,000, \$1,000 of which falls due July 1, 1886; the other \$1,000, July 1, 1888. The distribution of the debt, on the 30th of September, was as follows:

War bonds outstanding .....	\$2,000 00
Certificates of indebtedness, school fund. ....	1,562,700 00
Certificates of indebtedness, Normal-School fund .....	515,700 00
Certificates of indebtedness, University fund ..	111,000 00
Certificates of indebtedness, Agricultural College fund .....	60,000 00
Currency certificates .....	57 00
Total .....	\$2,252,057 00

The total State-tax levy for 1882 was \$710,220.88. Following are interesting items from the receipts of the fiscal year: Railroad licenses, \$586,328.58; plank-road licenses, \$107.16; telegraph licenses, \$3,417.60; fire-insurance licenses, \$40,727.26; life-insurance licenses, \$10,994.26—total from corporations, \$641,574.26; hawkers and peddlers paid in \$14,086.36.

Under the head of assessment of property, there are in the State 355,901 horses, 1,004,064 neat-cattle, 7,574 mules and asses, 1,258,131 sheep, 782,617 swine, 212,944 wagons and carriages, 26,223 watches, 23,878 musical instruments, and 32,083 shares of bank-stock, \$27,203,123 worth of merchants and manufacturers' stock, and \$28,956,730 worth of all other property, making a total of \$100,507,690 worth of personal property in the State subject to taxation. There are 27,142,837 acres of taxable lands in the State. The total valuation of the State, as returned by town assessors, is \$446,760,585.

Indebtedness of towns, cities, villages, and school districts: Railroad aid, \$2,642,609.85; bridges, \$117,417; other purposes, \$2,862,771.34; interest unpaid, \$608,008.10; school districts, \$179,227.23; total, \$6,410,133.52. Indebtedness of counties: Railroad aid, \$930,212.29; interest unpaid, \$52,341; all other purposes, \$466,792.06; total, \$1,769,605.35.

The account between the State of Wisconsin and the United States for the direct war-tax, as shown by the statement of the First Comptroller of the United States Treasury, stands as follows: Amount due the United States, September 30, 1881, \$207,685.16. During the year there was placed to the credit of the State, \$156,539.59, leaving a balance due the United States of \$51,145.57. There are now claims before the departments for adjustment, which will be allowed and credited to the State, amounting to \$20,000.

The sale of public lands during the fiscal year was 218,395.84 acres, at prices varying

from fifty cents to three dollars per acre. The report of the commissioners shows that there are now on hand nearly 1,000,000 acres of public lands; that there are nearly 240,000 acres not yet put in the market; and that there were selected during the year 67,000 acres, for which the State will soon receive patents.

**EDUCATION.**—The attendance at schools of pupils between the ages of seven and fifteen years is 87 per cent of the whole number in the State between those ages. The total valuation of school property, including buildings, sites, libraries, etc., is \$5,614,938. The total amount expended for public and private schools during the school year was \$2,577,402.

There were 948 students in attendance at the various normal schools during the year. There were 31 graduated and 61 licensed, and there are now employed in the public schools of the State 330 graduates of the normal schools, and 1,053 undergraduates. Sixty institutes were held in 51 counties, with a total attendance of 3,882, and at an expense of \$6,433. The regents report the schools in a prosperous condition, and earnestly endeavoring to perform the work assigned to them.

The annual catalogue of the State University for 1882-'83 reports the total number of students in the institution at 367.

The total receipts of the university for the fiscal year were \$98,932.37; total disbursements, \$92,736.90. The balance September 30, 1881, was \$7,604.71; the balance September 30, 1882, was \$13,800.18.

**PUBLIC INSTITUTIONS.**—At the close of the fiscal year there were confined in the State-Prison, at Waupun, 348 persons. The total cost of maintaining the prison for the year was \$47,751.33, of which the prisoners' earnings furnished \$31,129.30; receipts from visitors were \$193.50, making the net cost to the State of supporting the institution, \$16,428.53.

The number of boys in attendance at the State Industrial School, at Waukesha, on September 30th, was 299; average attendance during the year, 321. There were admitted during the year 95 boys, discharged 160.

The whole number of patients who have received treatment at the State Hospital for the Insane, at Mendota, during the fiscal year, was 656. The number discharged recovered was 49; improved, 59; unimproved, 56. The total cost of this hospital for the year was \$95,648.37, being a weekly cost per capita of \$3.92. At the commencement of the year the Northern Hospital for the Insane had under treatment 512 patients; admitted during the year, 225; total, 737. Of these there were discharged recovered, 64; improved, 26; unimproved, 30. The number present at the close of the year was 564; average for the year, 529. The cost of maintaining this hospital was \$98,160.02, which is equal to a weekly cost per capita of \$3.57.

The whole number of pupils enrolled at the Institution for the Education of the Deaf and

Dumb, at Delavan, during the year, was 244; of these there were present September 30, 1882, 182; average attendance during the year, 176. The total cost of supporting this institution for the year was \$34,375.94, which amount represents a weekly cost per capita of \$3.86.

At the Institution for the Education of the Blind, at Janesville, there were enrolled during the year a total of 82 pupils, of whom there were present on the last day of the fiscal year, 57; average attendance for the year, 63. The total cost of supporting this institution was \$16,726.17, equal to a weekly cost per capita of \$5.11.

**INSURANCE.**—The valuable report of the Insurance Commissioner shows that for the year ending December 31, 1881, the fire-insurance companies had:

Risks written .....	\$165,386,642
Premiums received .....	1,997,248
Losses paid .....	925,798

The life-insurance companies doing business in the State reported for the year ending March 1, 1882:

Policies in force .....	\$32,705,956
Premiums received .....	878,143
Losses paid .....	565,743

**RAILROADS.**—The year was one of more than usual activity in railroad enterprise, both in the volume of business and in the building of new roads.

The Wisconsin railroad earnings from June 30, 1881, to June 30, 1882, were \$18,765,428.32, an increase of \$3,287,255.71 for the year; being an average per mile of \$5,639.16, an increase of earnings per mile of \$824.25. The total cost of operating the railroads of the State was \$10,276,746.45, leaving as net earnings \$8,488,681.87; the operating expenses per mile were \$3,088.24, and the net earnings per mile of operated road were \$2,550.91. The total number of passengers carried upon the roads of the State was 3,611,973; equal to 162,231,759 passengers carried one mile, at an average cost per mile of a trifle less than 2'83 cents. There were 5,499,321 tons of freight carried; an equal of 813,414,402 tons carried one mile; and the average rate per mile on each ton carried was a little less than 1'61 cents, which is a decrease of '07 of a cent per mile on each ton of freight carried.

The Railroad-Commissioner system in Wisconsin has been a success, and, while the complaints have not been numerous, they have always received prompt attention. It is stated that, during a long term of years, not a single case of litigation has grown out of a complaint lodged with the Commissioner, but in every instance an amicable adjustment has been had, satisfactory to all parties concerned. It has been found much easier and better to adjust than to litigate, and in this way a better spirit has been developed and maintained between the people and the railroad corporations.

**IMMIGRATION.**—By a reference to the tables

of the report of the Board of Immigration, it will be seen that, of the 57,952 immigrants arriving in Milwaukee during the calendar year, 31,758 found homes in the State; and it is safe to say that fully 10,000 more went into Wisconsin, direct from Chicago, without passing through Milwaukee. The great majority of these new-comers settled in the northern part of the State. They were chiefly small farmers and farm-laborers from Germany, Norway, and Sweden, and will become important factors in developing the agricultural and other natural resources of Northern Wisconsin.

**ELECTION RETURNS.**—In November, Congressmen and members of the Legislature were chosen, and a vote was taken on two proposed amendments to the Constitution. Republicans were elected in the sixth, eighth, and ninth congressional districts, and Democrats in the other six. The following were the successful candidates: First District, John Winans; Second District, Daniel H. Sumner; Third District, Burr W. Jones; Fourth District, Peter V. Deuster; Fifth District, Joseph Rankin; Sixth District, Richard Guenther; Seventh District, Guibert M. Woodward; Eighth District, William T. Price; Ninth District, Isaac Stephenson. The vote was as follows:

**FIRST CONGRESSIONAL DISTRICT.**

Williams, Republican	11,853
Winans, Democrat	12,807
Blackman, Prohibitionist	2,207
Utley, Greenbacker	10
Scattering	1

Total vote of district	86,873
Winans's plurality	454

**SECOND CONGRESSIONAL DISTRICT.**

Rowell, Republican	8,870
Sumner, Democrat	10,671
Chapin, Prohibitionist	1,006
Merrill, Greenbacker	627
Scattering	8

Total vote of district	21,178
Sumner's plurality	1,801

**THIRD CONGRESSIONAL DISTRICT.**

Keyes, Republican	3,791
Hazelton, Republican	7,924
Jones, Democrat	18,035
Hastings, Prohibitionist	3,152
Scattering	2

Total vote of district	28,845
Jones's plurality over Hazelton	8,111
Jones's plurality over Keyes	9,244

**FOURTH CONGRESSIONAL DISTRICT.**

Winkler, Republican	8,320
Deuster, Democrat	9,688
Goodwin, Trades' Assembly	1,922
Scattering	1

Total vote of district	19,931
Deuster's plurality	1,368

**FIFTH CONGRESSIONAL DISTRICT.**

Howland, Republican	6,108
Rankin, Democrat	12,928
Wing, Prohibitionist	813
Thomas, Greenbacker	764
Scattering	16

Total vote of district	20,694
Rankin's plurality	6,825

**SIXTH CONGRESSIONAL DISTRICT.**

Guenther, Republican	10,808
Haben, Democrat	9,265
Kanouse, Prohibition	3,275
Stewart, Greenbacker	496
Scattering	5

Total vote of district	23,344
Guenther's plurality	1,088

**SEVENTH CONGRESSIONAL DISTRICT.**

Buttt, Republican	10,604
Woodward, Democrat	14,908
Parker, Prohibition	1,887
May, Greenbacker	860
Scattering	4

Total vote of district	24,768
Woodward's plurality	1,304

**EIGHTH CONGRESSIONAL DISTRICT.**

Price, Republican	14,059
Bailey, Democrat	11,315
Scattering	18

Total vote of district	25,392
Price's plurality	2,744

**NINTH CONGRESSIONAL DISTRICT.**

Stephenson, Republican	12,774
Park, Democrat	12,518
Woodmansea, Prohibitionist	1,460
Meehan, Greenbacker	199
Scattering	5

Total vote of district	26,956
Stephenson's plurality	256

**RECAPITULATION.**

Republican vote in the State	94,606
Democratic vote in the State	103,680
Prohibition vote in the State	18,800
Greenback vote in the State	2,496
Miscellaneous	2,392

Total vote of the State	216,924
-------------------------	---------

The vote in favor of the registry amendment was 36,223; against, 5,347; in favor of biennial sessions, 60,091; against, 8,089.

The Legislature to meet in 1883 will have 18 Republicans and 15 Democrats in the Senate, and in the House 53 Democrats, 42 Republicans, and 5 Independents.

**WOLSELEY, LORD**, formerly Sir Garnet Joseph Wolseley, an English general, born June 4, 1833, at the seat of his mother's family, near Dublin. His father was an officer, of the rank of major. The family had removed to Ireland from Staffordshire. Sir Garnet Wolseley was educated at a private school. He entered the army, with the rank of an ensign, in 1852. His first service was in the Burmese War of 1852-'53. In the Crimean War he was employed as an engineer in the trenches from December, 1854, till the capture of Sebastopol. He was severely wounded in a sortie, and for his bravery on different occasions was made a knight of the Legion of Honor. In the Indian campaigns of 1857-'59 he served with distinction, and received the brevet rank of lieutenant-colonel. In the Chinese War of 1860, employed on the staff of the quarter-master-general, he was present at all the engagements of the campaign. In 1870 he commanded the expedition sent from Canada to the Red River to suppress the insurrectionary government set up at Fort Garry, for which service he was knighted. During the Ashan-

tee War of 1873-'74 he was commander-in-chief, and for his success in that campaign was promoted to be major-general and received the thanks of Parliament. In 1874 he went to Natal to administer the government of the colony. The following year he acted as inspector-general of the auxiliary forces, and in November, 1876, was appointed a member of the Council of India. In 1878 he was selected to organize the government of Cyprus as high commissioner and commander-in-chief. In June, 1879, he returned to Natal, arriving at the close of the Zooloo War. As Governor and High Commissioner of Natal and the Transvaal he took charge of the work of organizing a government in the conquered Zoolooland, and conducted the subsequent campaign against Secocoeni. He returned to England in May, 1880, where he filled the post of quartermas-

ter-general, and, in April, 1882, succeeded Sir Henry Ellice as adjutant-general. When it was determined to send an expeditionary force to Egypt against the army collected by Arabi Pasha, Sir Garnet Wolseley, as the most successful and distinguished general in the British army, was appointed to conduct the campaign. His strategical plans were not interfered with by the civil authorities, and were so well laid that the war was terminated and the large Egyptian army dispersed before the operations were thought to be well commenced. For this last and greatest of his many achievements, Sir Garnet was raised to the peerage. He is the author of several works, including a "Narrative of the War with China" and a soldiers' manual, and a frequent contributor to the magazines. In 1867 he was married to a Miss Erskine.

*England*, parliamentary system of, very ancient, based on law and custom, 199; importance of precedents, 199, 200; rules very numerous and hard to classify, 200; Mr.

May's division into two classes, 200; language offensive to the other House to be repressed immediately, 200; personalities, how disposed of, 200; rules for addressing members, 200; rules as to proper behavior in the House of Commons, 201; in the House of Representatives, 201; interruptions how dealt with, 201; power of disciplining very extensive, 201; instances quoted, as to power of the Lords, and of the Commons, 201; penal powers of the House of Commons to exclude from its presence, 202; bar of the House, 202; case of John Wilkes (1764), 202; violent and illegal course of the House, which was forced to yield at last, 202, 203; expulsion less frequent in subsequent years, 203; O'Connell reprimanded, 203; the *clôture* or rule for stopping debate and getting direct vote, 203; course usually adopted by minority in Congress to "obstruct" passage of a bill, 203, 204; experience in Parliament of 1877, when Parnell and others tried this plan, 204; similar course in succeeding sessions, 204; Mr. Gladstone's bills (1881) on protection of person and property, and peace preservation, in Ireland, 204; excited discussion, course of the Irish members, action of the Speaker, etc., 204, 205; Dillon and nine others put out of the House, 205; autumn session of 1882, Mr. Gladstone's rules of procedure brought forward, 206; plea of necessity, 206; text of the rules as finally adopted, 206, 208; stringency of the rules, 207, 208.

The *clôture* in France, under Louis Philippe's government, 208; plan of Dupin, President of the Chamber of Deputies, 208; the Corps Législatif, under Louis Napoleon, 208, 209; the *clôture* again, how it was worked, 209; action of Jerome David, 209.

*Germany*, authority of Parliament in, 209; proceedings in the two assemblies substantially the same, 209; division of Parliament into seven sections, each with its own president, secretary, etc., 209; council of elders, in the Reichstag, important functions, 209, 210; proceedings, bills read three times, debate closed, vote taken, 210; absenteeism a serious evil in the German Parliament, 210; as many as five eighths absent (1880), 210; order of speaking, great freedom allowed, 210; list of speakers for both sides, 210; discretionary power of the president, 210; power of order, 210, 211; groups of deputies, 211; Bismarck's classification, 211; Conservatives, 211; Liberals, 211; Progressists and Socialists, 211; general aspect agreeable, 211; M. Reynaert's views quoted, 211.

*Dominion of Canada*.—Provinces composing it, 211, 212; Parliament consists of Senate and House of Commons, 212; suffrage, local Parliaments, etc., 212; Governor-General, Prime Minister, Privy Council, 212; population (census, 1881) by provinces, 212; religious denominations, Baptists, Roman Catholics, Church of England, Methodists, Presbyterians, 212; population according to origin, etc., 212, 213; cities (nine) over 5,000 inhabitants, 213; statistics of crime, 213; exports and imports, 213; trade with United States and Great Britain, 213, 214; line of steamers to South America, 214; fusion of two great railroad corporations, Grand Trunk and Great Western, 214; product of the fisheries, copper and iron ore, lumber, etc., 214; Nova Scotia coal industry, 214; public debt, large, 214; revenues increasing, 214; expenditures, on Government support, public works, etc., 214, 215; tariff modified, 215; estimated expenditures for next year, 215; session of Parliament, 215; nothing specially important done, 215; Canadian sympathy with Ireland, not relished by England, 215; elections in favor of Conservatives, 215; Welland Canal, present condition, 215, 216; Ontario boundary dispute, history of, not yet settled, 216; Ontario, receipts, expenditures, etc., 216; agricultural interests flourishing, 216; the Northwest

Territory, 217; condition and progress of, 217; divided into four districts, 217; Canada Pacific Railroad, brief history of, 217; to be finished by 1887, 217, 218; Newfoundland, coast telegraph, by signals, for movements of fish, etc., 218.

DRAPER, HENRY, M. D.—An American scientist and scholar, 218; sketch of his life and services, 218, 219.

DRAPER, JOHN W., M. D.—An eminent scientist and author, 219; born in England, came to United States at the age of twenty-two, 219; sketch of his life and labors in science, philosophy, etc., 219, 220.

*Dwellings, Laborers*.—Question of sanitary dwellings for the poor not yet much discussed in United States, 220; state of matters in London, 220; efforts to improve the housing of working-people, 220; the Torrens acts of 1868, 1869, 220; Sir Richard Cross's acts, 220; effects thus far produced, 220, 221; unsatisfactory state of things, 221.

## E

*Earth, Area and Population of the*.—Behm and Wagner's statistics on this subject valuable, 221; Strelbitzky's work on "Superficies of Europe," 221; table of areas and populations of continents, 221; table of areas and populations of the various countries of Europe, 221; boundary-line between European Russia and Asia, 221, 222; table of areas and population of the countries in Asia, 222; the same of Africa, 222; the same of America, 222; general result satisfactory, details doubtful, 222.

*Earth-Tremors*.—Constant vibration of the earth's crust, 223; two causes assigned, 223; removal of barometric pressure, observations on, in Italy, 223; effect of the ocean-tides to this end, experiments of the British Association, 223; observations on earthquakes, instituted in Switzerland, 1879, 223; report on earthquakes in Switzerland, the Italian Peninsula, etc., 223, 224; present view of the origin of earthquakes, 224.

*Ecuador, Republic of*.—Chief Magistrate and Cabinet, 224; the army, 224; revenue much less than expenditures, 224; foreign debt very heavy, 224; foreign trade in cacao, Peruvian bark, coffee, etc., 224; exports and imports, 224, 225; trade with Great Britain increasing, 225; distracted state of the republic, 225; the present Dictator's (Veintemilla's) disgraceful career, 225.

*Education and Illiteracy*.—Statistics of census (1880), showing extent of illiteracy in United States, 225, 226; table showing number of persons ten years old and upward (white and colored) unable to read and write, 226; table showing the total population, school population, average attendance, etc., in the several States and Territories, 227; table showing amount of taxation for support of public schools in each State and Territory, 228; plan proposed for national aid to education, 228; improved methods of instruction, 228; experience of the schools in Quincy, Mass., 228; education in France, progress and improvement of late years, 228, 229; Government help, 229; education in other countries, Germany, Italy, etc., 229; general advance, 229; Russia very much behind, 229; in Great Britain and Ireland, number of schools, Government help, etc., 219; "board-schools," how supported and managed, 229; new code for these schools, 229, 230; industrial and technical education, 230; progress in this direction, 230; new law in France respecting primary instruction, 230; chief object of the law, 230; moral and civic instruction, also compulsory, 230; details of the plan of working, 230, 231; strong opposition because religious instruction wholly excluded, 231; also because compulsory, 231; in Belgium, education not compulsory, 231; teachers how qualified and chosen in France and Belgium, 231; attitude of Roman Catholics

toward secular school education, 232; effort in Switzerland to bring public education under control of the Federal Government, 232; decree of the Assembly to this effect, 232; much disputed and opposed, 232; submitted to the popular vote and rejected, 232.

*Egypt.*—Semi-independent under Mehemet Ali and his family since 1806, 232, 233; Tefik Khedive, 1879, 233; interference of France and England, 233; area and population, 233; foreign population, 233; exports and imports, values of, 233; commerce carried on with steam-vessels, 234; dependence on the Nile, 234; artificial helps for irrigation, 234; table of crops, acreage, yield, etc., 234; Egyptian debt enormous, 234; table of loans, from 1862-79, from English and French banking-houses, 234; Ismail Pasha's financial operations, 234; reckless course, 235; greed of English and French capitalists, 235; Ismail deposed, 235; terms of new arrangement (1880) for settling of public debt, 235; how it worked, 235; money expended on public works, 235, 236; estimate of Ismail's seventeen years' reign, 236; increase in population, revenue, railroads, canals, etc., 236; finances rest on the heavy land-tax, 236; taxes, how distributed, 236; compulsory labor, 236; financial improvement, 236, 237; funded debt, income, and expenditure, 237; intervention of England and France, 237; Council of Liquidation and work of the Controllers, 237; virtually took possession of everything, 237; cost of foreign officials, 237; reduction of the army very offensive, 238; outbreak of the officers, in 1881, 238; hopes of the Egyptians, 238; next steps of England and France, 238; the Sultan's commissioners and English ironclads at Alexandria, 238, 239; the national party's programme, six points, 239; complaints against foreign interference, 239; cause advocated by the army, the merchants, the village sheiks, Christian portion of population, etc., 239; opposed to the party, the Turks, Circassians, moneylenders, etc., 239; Chamber of Notables called together, 239; object sought for, 239, 240; national movement, basis of, 240; Sherif and Sultan Pasha very influential, 240; project of organization of the Chamber by Sherif Pasha, 240; demands of the Chamber, on assembling, 240; menacing language of the powers, 240, 241; diplomatic movements in France and England, 241; Sherif resigns, Arabi Bey appears as War Minister, 241; new ministry formed, 241; Arabi's further movements, in arresting and punishing officers, etc., 241, 242; progress of dispute and troubles, 242; England and France resolve upon a great naval demonstration, 242; fleet at Alexandria, 242; Arabi determines to resist, 242; the Sultan's prospects and efforts, 242; ministers resign, Tefik's plans, 242, 243; demand made that Arabi be retained as War Minister, 243; Turkish intervention, 243; course of the French and English, 243; the Khedive and Arabi, 243; excitement among Egyptians, 243, 244; riot in Alexandria, 244; Europeans killed, disastrous results, 244; Arabi and the Egyptians prepare to fight, 244; conference at Constantinople, resolves of, 244; Sir B. Seymour's course, 244; forbids further fortifying of Alexandria on peril of bombardment, 244; prepares for action with eight ironclads and 8,500 men, 244; opens fire on morning of 11th July, 245; continued for ten and a half hours, 246; forts blown up, loss of life, etc., 246, 247; power of ironclads against forts, 247; sad scenes, fire and pillage of the city, 248; English take possession, aided by others, 248; heavy losses, 248; conference negotiations, 248, 249; policy of England and other powers, 249; Sultan pushed on to no purpose, 249; Arabi summoned by the Khedive, and pronounced a rebel, 249, 250; Lord Dufferin's diplomatic strategy, 250; British interests in Egypt made the pretext for the course adopted, 250, 251; war of occupation, 251; Arabi's force and efforts, 251; troops from England,

General Wolsley in command, 251, 252; progress of the campaign, 252, 253; Arabi fights the English, August 25th, defeated, 253; Arabi's further attempt, failure, 253, 254; final defeat, September 12th-15th, made prisoner, 254; protests of the powers, 254; the Khedive's new ministry, 254; Arabi tried, condemned, and banished to Ceylon, 255; rise of a false prophet in the Soudan, 255; success and further progress, 255.

*Egyptological and Assyriological Research.*—Important advances in knowledge, 255; museum at Boolak, 255; Egyptian chronology reaching back 5,000 years, 255, 256; materials for investigation, inscriptions on monuments, temples, and tombs, 256; Egyptian chronology by signs and dynasties, 256; difficulties in the way of exactness, 256; the Apis bulls' series of inscriptions, 256; tablets of Abydos, Sakkarā, Karnak, 256, 257; investigations into use and value of Abydos tablet, 257; evidence of lost cities greatly desired, 258; splendor of the pyramids when perfect, 258; aggregate testimony of Egyptian monuments, according to M. de Rouge, 258, 259; Egypt before and at the time of Moses, 258, 259; value of conclusions, 259; monuments on the Euphrates and Tigris, 259; cuneiform inscriptions, 259; texts on cylinders of clay, 259; M. Picot's researches, 259; the eighteenth Egyptian dynasty rich in monuments, 259; early religion monotheistic, 259, 260; documents of the earlier dynasties, 260; M. Mariette's valuable researches in Egyptian antiquities, 260; opening of pyramids at Sakkarā, 260, 261; Maspero's prosecution of the work, 261; discovery of royal mummies at Thebes, 261; list of these, with the dynasty, 261, 262; pyramid of Seneferu at Meydoun, 262; probable age and importance in Egyptology, 262; recent Assyrian and Babylonian researches, 262; Mr. G. Smith's labors in this field, 262, 263; other workers, 263; M. Rassam's discoveries at Sippara, 263; date and position of the Hittites, 263, 264; powerful people, 264; the religious sense in early nations of antiquity, 264.

*Electrical Energy, Storage of.*—Need of a storage-battery, 264; how the storing of energy of an electric current becomes possible, 264; the process described, 264, 265; polarization of the electrodes, 265; researches of Volta, Ritter, Davy, etc., 265; M. Planté's experiments and results, 265; M. Faure's further improvements, 265; labors of other scientists, 265, 266; Thomson and Houston's storage-cell, 266; H. Sutton's experiments, 266; valuable results, 266; experiments on the Faure cell, 266, 267; results thus far, 267; table of cost of accumulators, according to size, etc., 267; heavy expense as at present made, 265.

*Electric Lighting, Progress of.*—Arc-lamps for out-door, incandescent for house lighting, 268; the Edison and other companies' lamps, 268; the regulator arc lamp, and pure incandescent, 268; likely to survive, 268, 269; Reynier's improvements on regulators, 269; two new dynamo-machines, Gordon and Thomson Ferranti, 269; description of the latter, 269, 270; Gordon machine, largest yet constructed, 270; description and power of, 270; electric lighting in New York city, 270, 271; Edison's system and working, 271; description of machines, etc. (with illustrations), 271, 272; success in operation, 272; the Brush-Swan Company's system, 272, 273; the United States Electric Light Company's plan, 273; report of commission of French experts on the chief lamps and machines, 273; table of continuous current generators and lamps, 274; report of committee on incandescent lamps, 275; description of the four chief lamps, 275; method of measuring efficiency of these lamps, 275, 276; resistance of lamps cold, 276; methods of calculation, 276, 277; tables of summary of the results, 277; conclusions drawn from these results, 277.

EMERSON, RALPH WALDO.—An American philosopher and

- lecturer, 277; sketch of his life and labors, 277, 278; lectures and poems, 278; personal character, 278; estimate of his position and influence, 278; published works, 278.
- Engineering.**—St. Gothard Tunnel finished after twenty years' delay, 278, 279; projected ship-canals, 279; canal through the Delta proposed, 279; need of a canal to Cairo and Suez, 279; Panama Canal advancing, 279; also canals in Greece and India, 279; new docks at Milford Haven, 279; proposed work at the Zuyder Zee, 280; enlargement of harbor of Antwerp, 280; importance of St. Gothard Tunnel, 280; new French railroad projected through Mont Blanc, 281; the Arlberg Tunnel, 281; the Beaumont perforator, 281; tunnel under the Hudson River at New York, 281, 282; the Severn Tunnel, 282; the Brooklyn Bridge, 282; another farther up the river under way, 282, 283; Erie Railroad Bridge over Kinzua Valley, Pennsylvania, 283; new bridge over the Forth, to be of steel, 283; the new Eddystone Light-house, 283; Tillamook Light-house, Oregon, difficulty of building, 283, 284; the Himalayan Railroad, 284; steam-heating of towns and cities in United States, 284.
- English Channel Tunnel Panic.**—Work begun on the tunnel, 284; excited public feeling against it, 284, 285; the scare in England, 285; French wish the tunnel made, 285; arguments of tunnel advocates, 285; military authorities still inimical, 286.
- Epidemic Diseases, Sanitary Control of.**—Attempts at control of epidemics, 286; germ theory settled, 286; five chief fatal epidemics, 286; other infectious diseases, 286; the plague, its nature and ravages, 286; terrible poisons, 286, 287; conveyance of infection by air certain, 287; the "Ceeley case" (1840), 287, 288; what "sewer-gas" is, 288; infection carried by water, 288; connection of filth and sewage with disease, 288; for sanitary control germs must be destroyed, 288; course to be pursued by health-officer, 288, 289; Asiatic cholera, Dr. Blanc's interesting statements, 289, 290; preventive measures to be used, 290; ships and steamboats carry disease, 290; sanitary inspection absolutely necessary, 290; course to be pursued in towns and cities in cases of infection, 290; sanitary cordons around infected districts, 290, 291; course pursued with the plague in Astrakhan, Russia (1878), 291; Government action, 291, 292; experience in yellow fever in Southwestern Texas, 293; Surgeon-General Hamilton's report, 293; measures adopted, 293; course recommended, 293, 294.
- Europe, Area of.**—Total area, according to General Strblitzky, 294; table of areas by countries, 294; tables of areas of principal islands, 294; lengths of rivers, 294; areas of lakes, 294, 295; areas of seas of Europe, 295; Baltic coast-line the longest, 295; entire coast-line of different countries, 295; coast-line of Great Britain and Ireland, 295; areas of chief gulfs and bays, 295; narrowest strait, the Bosphorus; widest, St. George's Channel, 296.
- Evangelical Association.**—Summary of the number of preachers, churches, members, 296; contributions, etc., 296.
- Explosions, Boiler.**—Lawson's experiments, 296; commission appointed by Government, 296; official report to the Secretary of the Treasury, 296-298; Lawson's theory and mode of boiler-construction indorsed, 293.
- F**
- Farms and Live-Stock in the United States.**—Table showing great increase in farms in United States, during ten years, 298.
- Finances of the United States.**—Review of, 299; receipts for the fiscal year 1882, 299; expenditures for the same period, 299; surplus unusually large, 299; receipts compared with previous fiscal year, 299; ditto expenditures, 299; receipts and expenditures for the calendar years 1881 and 1882, 300; receipts of 1882 compared with those of the calendar year 1881, 300; assets and liabilities of the Treasury on January 1, 1882, and January 1, 1883, 300; increase in the receipts from duties on imports of sugar, wool, iron, steel, silk, cotton, and spirits, compared with the preceding year, 301; ditto from internal revenue, 301; changes in the public debt during the year, 301; refunding operations, 301; proposed issue of 8 per cent bonds in Congress, 301; adopted at  $8\frac{1}{2}$  per cent, 302; average rates of interest to investors of 4 and  $4\frac{1}{2}$  per cent securities, 302; proposal of the Secretary for a reduction of revenue, 302, 303; Tariff Commission appointed by Congress, 303; motives that governed it, 303; resources and liabilities of the banks, 304; bill for the extension of the existence of the banks, 305, 306; imports and exports, 306; coinage, 306; value of articles of import during the fiscal years 1881 and 1882, 307; ditto, imports and exports with different countries, 308.
- Fisheries of the United States for 1880.**—New England States, extent and value of fisheries, 309; Middle States, sea-fisheries, river and lake and oyster fisheries, 309, 310; general summary for Middle States, 310; South Atlantic States, sea and river fisheries, and oyster industry, 310, 311; general summary for South Atlantic States, 311, 312.
- Florida.**—State government, 312; progress of internal improvements, 312; work on Lake Okeechobee, prospect of success, 312; inland water communication, "Florida Coast Line Canal and Transportation Company," 312; Governor Bloxham's message in regard to railroads in the State, 312, 313; general revenue (including interest taxes), 313; moneys paid out, 313; estimate of appropriations for the next year, 313; Comptroller's statement, 313; question of railroad taxation not settled, now in United States Supreme Court, 313; State and county taxes, 313, 314; school facilities and attendance, 314; deaf-mute education, 314; Agricultural College, 314; Insane Asylum, 314; State convicts utilized, 314; population, 314; yield of cotton, corn, oats, etc., 314; live-stock, manufactures, etc., 314; Supreme Court decision on homestead exemption, 314, 315; Constitutional Convention needed, 315; election returns, 315; yellow fever at Pensacola, 315.
- Food-Preservation.**—Important to find chemical antiseptic tasteless and innocuous, 315; Professor Barff's investigations and discovery of antiseptic compound, 315; use of boracic acid, 315, 316; compound with glycerine, 316; M. Potel's compound, 316; storage depot for meat, fish fruit, etc., at Shoreditch, London, 316.
- Forests of the United States.**—American pine-forests, 316; census returns, 316; chief source for supply of white-pine lumber, 316; amount cut, and new growth, 316; Southern Atlantic pine-growing States, 316; supply from Gulf States and Southwestern States, 317; timber-supply of the Pacific States, 317; waste of American forests, 317; area of forests in Europe, 317; American Forestry Congress, objects in view, 317, 318; meetings, action, etc., 318; act of Congress to encourage tree-planting, 318; State laws for same purpose, 318; kinds of trees best for planting in various localities, 318, 319; successful forest planting in Southwestern France, 319; lumber industries of the United States, extent and value, 319; consumption of forest products as fuel, 319; value of different woods for fuel, 319; results of analysis and experiments, 319.
- France, Republic of.**—National Legislature, how composed, 320; two Houses, Deputies, 557 members, Senate, 300 members, 320; annual meeting, length of session, etc., 320; presidential term seven years, 320; Jules Grévy President (elected 1879), 320; area and population, 320; native population, foreign, religious profession, etc., 320;

towns of over 80,000 inhabitants, 820; post-offices, telegraphs, 820; imports and exports, 821; trade with England and the United States, 821; merchant marine, 821; area and population of Algeria, 821; chief cities, commerce, etc., 821; colonial possessions in Asia, Africa, America, 822; French protectorate over Tunis, 822; area and population, 822; the army, numbers and efficiency, 822; extent and force of the navy, 823; sources of revenue, direct imposts, special taxes, etc., 823; expenditures, 823; public debt, cost of war and foreign occupation, 823; fall of the Ferry Ministry at close of 1881, 824; Gambetta elected President of the Chamber of Deputies, 824; asked to form a ministry, 824; how composed, 824; dissatisfaction general, 824, 825; attack on the Church, 825; Tunisian and other troubles, 825; project of *scrutin de liste* rejected, 825; Gambetta resigns, 825; the Freycinet Ministry, 825; action in the Legislature, 825; course on the Egyptian question, 826; Freycinet resigns, 826; the Duclerc Ministry, 826; Gambetta's course and death, 826; Bonapartists and other pretenders, 826.

*Free Religious Association*.—Receipts and expenditures, 826; report of Executive Committee, 826, 827; objects had in view, 827; success thus far, 827.

*Friends*.—Moderate growth, 827; New England Yearly Meeting, 827; London Yearly Meeting, 827; mission-work discussed, 827, 828; work among the Indians, 828; members of London Yearly Meeting, schools, Tract Society, Temperance Union, etc., 828.

G

GARIBALDI, GIUSEPPE.—Italian independence leader, 828; sketch of his life and varied career, 828, 829; twelve years in South America, 828, 829; return to Italy, and course there, 829; goes to New York, 830; goes back again to Italy, and service there, 830; his last years, and death, in his seventy-sixth year, 830.
